Church Organisation in India.

ANGLICAN.

Down to March 1st, 1930, the Church of England in India (and Ceylon), though possessing its own bishops and Metropolitan, was in the eyes of the law an integral part of the Church of England, and subject to the general supervision of the Archbishop of Canterbury. By the Indian Church Act and the Indian Church Measure passed by Parliament in 1927 this legal connection was severed, and on March 1st, 1930, for the fixing of which date provision was made by the Indian Church Measure, the Church of England in India and in Ceylon, in future to be known as The Church of India, Burma and Ceylon, and, for short, The Church of India, became wholly responsible for the management (or of Burma, or of Ceylon, in those countries) of its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Anglican work in India dates from the first establishment of the East India Company in the 17th Century on the shores of India at Surat, Madras, and Bombay, where the servants of the Company were ministered to by a continuous succession of chaplains. The first chaplain was the Revd. Peter Rogers, Surat, 1612. The first church built was St. George's, Madras, in 1650, followed by Bombay Church, now St. Thomas' Cathedral, in 1716. In South India the work of Danish and German Lutheran missionaries was assisted by the English S.P.C.K. (Society for the Promotion of Christian Knowledge), but missionary work was not attempted by the Church itself till the beginning of the 19th Century.

Like all other branches of the Anglican Communion the Church of India is episcopal. The first bishopric was not, however, founded until 1814 when the see of Calcutta was set up, the first bishop being Thomas Farnham Middleton. His jurisdiction at first included not only British India but the British settlements in Australia, the Straits, the Cape and St. Helena's. At the same time India was divided into three Archdeaconries, and two of these, Madras in 1835 and Bombay in 1837, were later erected into bishoprics. The three dioceses thus formed have been repeatedly subdivided, until in 1930 there were fourteen dioceses, the dates of their creation being as follows: Calcutta 1814; Madras 1835; Bombay 1837; Colombo 1845; Lahore 1877; Rangoon 1877; Travancore 1879; Chota Nagpur 1890; Lucknow 1893; Tinnevely 1896; Nagpur 1903; Dornakal 1912; Assam 1915; Nasik 1929. Plans are in hand for the formation of two more dioceses out of Lucknow and Calcutta. Rangoon, Lahore and Dornakal hope also to be divided shortly. There are assistant bishops in the dioceses of Lahore, Calcutta and Dornakal.

Rules for the government of the Church are contained in its "Constitution, Canons and Rules" adopted by its General Council in

session at Calcutta in 1930. All clergy before receiving a license from their bishop make in addition to an oath of canonical obedience to their bishop, a declaration accepting the Constitution, Canons and Rules, as well as a declaration concerning the faith and formularies of the Church. Lay members of the General and Diocesan Councils also make declarations of assent and acceptance. The government of the Church is through these councils, the General Council being for the whole ecclesiastical province of India, Burma and Ceylon. Its membership consists of the bishops of the province, and houses of clergy and laity elected by the diocesan councils. The Diocesan Councils consist of the Bishop of the Diocese and all its clergy, together with lay representatives elected by the parishes. To exercise a vote in the election of lay representatives parishioners must be adult communicant members of the Church. It is open to a diocese to add to these qualifications that of having contributed some specified amount to the expenses of the Church. In addition to these councils every parish has a Church committee or council with a recognized constitution and these are in many areas organised into district Church councils, particularly where Indian parishes are numerous. Again in addition to these councils the bishops of the province meet in Synod, with clerical and four lay assessors if a matter of faith or order is being dealt with, and the bishop of a diocese can at any time hold a Synod of his clergy. Determinations on matters of faith and order are made only by the House of Bishops of the General Council and cannot be made subjects of disciplinary action unless adopted in the form of a canon by the whole Council.

The additional title of Metropolitan was given to the Bishop of Calcutta when the sees of Madras and Bombay were formed. It is an ancient title similar to archbishop and indicates that its holder has jurisdiction over the other bishops of the province. Before consecration a diocesan bishop takes an oath of canonical obedience to the Metropolitan. Under the Constitution of the church bishops are elected by the diocese, subject to confirmation by the bishops of the province. In the Constitution, Canons and Rules, the Constitution consists of Declarations laying down the position of the Church of India as a part of the One, Holy, Catholic and Apostolic Church; the Canons lay down principles of government and organisation; the Rules arrange in detail for the carrying out of the Canons, and are more easily altered or added to than the Canons. The salaries and allowances of the Bishops of Calcutta, Madras and Bombay, have from the foundation of those sees been paid out of the Revenues of Government, as also in part those of the Bishops of Lahore, Rangoon, Lucknow and Nagpur. Down to 1930 these bishops were appointed by the Crown. Since 1930 the bishops of these seven dioceses are elected, and when the bishops occupying the first three sees in 1930 vacate their sees their successors will be paid in part only from a grant from Government for the

episcopal supervision of its establishment of chaplains. For the other seven bishoprics, and for any others, set up, Government is in no way responsible.

The Ecclesiastical establishment of the Government of India is an inheritance from the East India Company. That Company from the first provided chaplains for its servants. The chaplains of the present establishment are maintained for ministration to the Government's British born servants, civil and military. They are chosen by the Indian Chaplaincies Board sitting in London, are appointed by the Secretary of State, are posted to Dioceses by the Governor-General in consultation with the Metropolitan, and within their Dioceses are posted to stations by the Provincial Governor on the recommendation of the diocesan bishop. Their pay and allowances are wholly met by Government. In spiritual matters they are subject to the supervision and jurisdiction of their bishop, and while Government servants civil and military are their primary charge, they are the parish priests of the chaplaincies to which they are appointed and are responsible for the care of all members of the church in their parish except in so far as Indian Members of the Church are cared for by missionaries or Indian clergy. Besides providing chaplains for the Indian Army, again following the example of the East India Company, has been the provision of chaplains for the Indian Navy, and their maintenance, and also of cemeteries. Where numbers do not warrant the provision of an Establishment chaplain Government has assisted in the provision of clergy by grants-in-aid and when from time to time the number of Establishment chaplains has been reduced special grants-in-aid have been granted. The Establishment and all grants-in-aid are subject to revision and are in fact revised from time to time.

(The Ecclesiastical establishment includes besides Anglican chaplains, Church of Scotland, Free Church, and Roman Catholic chaplains, for ministrations to members of those communions; and churches and grants-in-aid are provided or given on the same principles as for Anglicans.)

The special interests of those parishioners whose domicile is England in the continued use, should they so desire, of the services of the English Prayer Book, which the Church of India is now free to alter at its discretion, are safeguarded by certain of the canons, and these interests together with other matters concerning the undertakings and relation of the Government of India to its chaplains and the Church are provided for by a set of Statutory Rules drawn up under the Indian Church Act. Members of the Church of England or any of the branches of the Anglican Communion are, while resident in India, full members of the Church of India, and are a most important part of the Indian Church, their numbers still in some places exceeding those of Indian members, and some stations being still exclusively European, although in the Church as a whole the number of Indian members greatly exceeds that of Europeans. European clergy numbered 389 in 1939, and Indian clergy 716. There are no racial distinctions whatever in the Church;

Indian clergy frequently preach or celebrate for European congregations, and in a few instances are in permanent charge of European parishes. The Indian laity though usually preferring services in their own languages are everywhere free to attend English churches, and to be enrolled, if they wish, as parishioners.

The education of European children, and more particularly the children of the Domiciled and Anglo-Indian community, has from early days been a concern of the Church. In addition to day-schools it has established over 70 boarding-schools for boys and girls, many of them in hill stations. The provincial Governments assist these schools with grants-in-aid both for building and current expenditure, just as they do all other schools, according to the rules of the education codes. The schools are inspected by Government inspectors. Indian boys and girls are admitted to these schools, but the number that may be taken is limited to a percentage fixed by the local Government. An appeal issued by the Archbishop of Canterbury in 1938 for the endowment of these schools had produced by June, 1939, just under £30,000. The fund is known as The Anglo-Indian Schools Fund and is still open for the receipt of donations. Indianisation of Government services, especially of the railways, customs and post and telegraph departments has severely hit the Domiciled and Anglo-Indian community, and the ability of parents to pay fees is steadily decreasing. Hence the urgent need for increased endowments. The existing endowments of all the schools yield an income of less than £1 per child per annum.

(The Church of India is not the only community responsible for European education in India. The Roman Catholics, the Church of Scotland and the various free churches provide schools for their children, and receive similar assistance from Government.)

The Government of India Act of 1935, section 83, provides for the continuance of government grants to European schools at a total figure in each province of Rs. 10 lakhs for the ten years 1935-45. When the grant to European education may be reduced in proportion. And, as a result of the recommendations of a sub-committee of the Round Table Conference, provincial boards. For Anglo-Indian and European Education have been set up, and also an Inter-Provincial Board, to consider and advise Governments on matters connected with the schools.

Missions.

In Malabar, on the south-west coast of India, there have been Christians certainly from the 6th century, probably from the 4th century and possibly from the 1st century A.D. They are called "Syrian" Christians owing to their connection with the Church in Syria. They do not appear to have attempted to spread the Christian faith in India. The Portuguese may therefore be regarded as the first missionaries in India, and from their arrival at Goa the Franciscans and Dominicans who accompanied their fleets in large numbers threw themselves with great activity into the work of evangelism.

The formation of the Society of Jesus led to one of its first members the famous St. Francis Xavier being sent to Goa, where he arrived in 1541. Under his leadership the preaching of Christianity was carried on with great earnestness. The missionary work of the Roman Catholic Church thus begun has been continued, and at the present day the number of Indian members of that Church is given as 2,113,659 (Census 1931), to which may be added 654,939 Syrian Christians attached to the Roman Church. The number of independent Syrian Christians (Census 1931) is given as 525,607.

Protestant missions did not begin till the 18th Century, and as missionaries were not allowed to establish themselves in the Company's territories, they worked from Danish territory and in Indian States. These missionaries were Lutherans, but as stated above, were in the latter part of the 18th Century assisted with funds from England. Famous men among them were Ziegenbalg, Kiernander, Schultze and Christian Friedrick Schwarz. By the end of the 18th Century it is believed that there were in South India about 30,000 Lutheran converts. In 1800 the famous Baptist trio, Carey, Marshman and Ward established themselves at Serampore in Bengal (Carey had come to India in 1793). Men of humble origin and education, one was a cobbler, one a ragged-school teacher, and one a printer, they displayed great ability and enterprise, and threw themselves not only into evangelism but into the scientific study of India, its languages and culture, and its flora and fauna. Books and translations poured from their printing press. Carey was made professor of Sanscrit in Lord Wellesley's College for the training of civil and military officers.

The 19th Century saw a great increase in missionary effort of every sort. This was due to the opening of the Company's territories to missionaries by the Government of India Act of 1813, and it was only after that date that Anglican (Church of England) missionary Societies took up work in India, namely the Church Missionary Society and the Society for the Propagation of the Gospel, by sending missionaries ordained clergy of the Church of England, those hitherto subsidised or sent by the S.P.C.K. (see above) being Lutherans. The first missionaries to arrive after the passing of the Act were American Congregationalists. The London Missionary Society were also early in the field and Presbyterians from America and Scotland soon followed. In the course of the century India became covered by a net-work of missions, engaged not only in evangelism, but in educational work in schools and colleges, in medical work and in industries. Among famous names of missionary educationalists are those of Dr. Duff of Calcutta, and Dr. Wilson in Bombay. In the education of women missions may fairly claim to have taken the lead. The total number of missionary societies from Europe and America working in India is now over 150. For consultation and common action there is a National Christian Council with headquarters at Nagpur, first organised in 1914, and in connection with this there are 10 Provincial Christian Councils. Membership of these councils is by election or appointment by local churches and mission councils.

The Directory of the National Christian Council shows that the missions connected with it have 53 Colleges; 315 High Schools and about the same number of middle schools; 103 Teachers training institutions; 217 industrial schools, and very many primary schools; 250 hospitals and about the same number of dispensaries; 68 Leper institutions and 11 Tuberculosis Sanatoria, and 15 homes for the Blind or Deaf; 64 Agricultural Settlements; 31 Co-operative Societies; 40 printing presses; 36 miscellaneous industries. The Census of 1931 gives 3,002,558 as the total number of Protestant Christians in India, making the total number of Christians, including Roman Catholics, Romo-Syrians and Syrians (see above) 6,296,763; included in this total are 167,771 Europeans and 138,758 Anglo-Indians.

Reunion.

Since the Great War there has been wide spread interest in India in the subject of the reunion of the separated Christian bodies. In South India the movement for union was started in 1919 by a group of Indian clergy. This has led to the preparation of an elaborate scheme of union the parties to which are Anglicans, Methodists and the already united South Indian United Church which consists of Presbyterians and Congregationalists. Much time and thought have been given to the preparation of the scheme, the problem presented by the task of reconciling Anglican, Presbyterian, Wesleyan and Congregationalist principles being of extreme difficulty.

If the scheme is accepted the four southern dioceses of the Church of India, Madras, Dornakal, Tinnevely and Travancore will be separated from the rest of the province and form part of the united Church, which is pledged to maintain episcopal government. The general principles of the scheme were approved by the Lambeth Conference (of Bishops of the Anglican Communion) in 1930, but it has not yet (1940) been sufficiently completed in detail for final submission to Diocesan Councils.

The existence of a united church in South India consisting of Congregational and Presbyterian elements has been mentioned in the preceding paragraph. In north India there has been in existence for some years The United Church of India (North) consisting of similar elements. Since 1929 a further movement for a wider union in north India has been considered at a series of Round Table Conferences to which the Church of India has sent representatives. In south India, again, a movement has started for union between two sections of the Syrian Church (the Orthodox and the Mar Thoma Reformed) and the Anglican Church, and the Church of India has agreed to send delegates to the Kerala Council of Church Union responsible for this movement (Kerala is a general name for the area covered by the States of Travancore and Cochin and the district of British Malabar).

Anglican Missions.

In addition to the two principal missionary societies of the Church of England, the S.P.G. (Society for the Propagation of the Gospel in Foreign Parts) and the C.M.S. (Church Mission Society) already in India, Burma, ...

	Ordained.	Laymen.	Women.	Total.
S.P.G. ..	79	23	167	269
C.M.S. ..	65	28	127	220 + 60

married women, there are also certain smaller, but important missions, namely The Oxford Mission to Calcutta working in Calcutta among students and also at Barisal; the Cowley-Wantage-All Saints Mission, working in Poona and Bombay; the Dublin Mission at Hazaribagh, the Cambridge Mission at Delhi, the Cawnpore Brotherhood; the Scottish Episcopal Church Mission, at Chanda C.P.; the Bible Churchmen's Missionary Society (12 ordained missionaries in the Lucknow and Nagpur and Rangoon dioceses); the Christa Seva Sangha, Poona, 1927 and the Christa Prema Seva Sangha, Poona 1934; the Canadian Church Mission (4 ordained missionaries in the Lahore Diocese); the Church of England Zenana Missionary Society, in several dioceses; the Sisters of St. Margaret (East Grinstead) in the Colombo diocese; Sisters of St. Denys (Warminster) in the Chota Nagpur Diocese; Sisters of the Holy Family, Naini Tal; the Winchester Brotherhood, Mandalay, and the Sisters of the Church, Maymyo. The first two of these, and several of the others in the list, consist of communities of priests or sisters under religious vows. Members of the brotherhoods mentioned are in most cases not under life vows. The work and influence of these communities is a most important element in the life of the Church of India.

The Church of India has taken its full share in educational, medical and industrial work in India. Among colleges founded and managed by its missionaries St. Stephen's, Delhi, St.

John's, Agra, St. Columba's, Hazaribagh, Christ Church, Cawnpore, and Trinity College, Cawnpore, are well-known. A college at Trichinopoly has been amalgamated with the inter-denominational Madras Christian College. For the training of Indian and Anglo-Indian ordination candidates Bishops' College, Calcutta, serves the whole of India. In the various language areas are other colleges for the training of ordinands and lay church-workers through the medium of the local language. Among hospitals made famous by the work of the doctors in charge are those at Quetta (Sir Henry Holland), Bannu (the late Dr. Pennell) and St. Stephen's Delhi (for women). The C.M.S. High School at Shrinagar is distinguished among the many High Schools of the Church for the methods adopted to develop manliness and *esprit de corps* in the boys. Cawnpore in the north and Nazareth in the extreme south are well-known centres of industrial work and training. The Diocesan Press at Madras was built up into a very large and efficient institution by a retired C. M. S. Missionary. At Hubli, in the Bombay Diocese, S. P. G. missionaries have, since 1919, done extremely good work in charge of an Industrial Settlement (for the reformation and training of members of criminal tribes) committed to their care by Government.

Exact figures of the membership of the Church of India are not obtainable. From figures, .. . about three quarters high about a lakh and an Anglo-Indian: .. . rs of Indian Christians Travancore, Lahore, Madras, Calcutta, Lucknow, and Chotta Nagpur. The number of clergy, European and Indian, has been given in an earlier paragraph.

Bengal Ecclesiastical Department.

Westcott, Most Rev. Foss, D.D. Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Young, Ven'ble Ernest Joseph, B.A. Archdeacon of Calcutta and Senior Chaplain of St. John's Church, Calcutta.

THE ROMAN CATHOLIC CHURCH.

The Catholic community is composed of the following elements:—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syrian rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
- (3) European immigrants at all times, including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.
- (5) Recent converts from the Jacobite community in Malabar, of which 3 Bishops, 71 priests and some 28,000 laity have been received into the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended

by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of **Extraordinary Ecclesiastical Affairs**:—

The archbishopric of Goa and Damaun (having some extension into British territory) with suffragan bishoprics at Cochim and Mylapore (both in British territory).

Under the Sacred Congregation of **Oriental Churches**:—

The archbishopric of Ernakulam, with suffragan bishoprics of Changanacherry, Kottayam and Trichur.

The archbishopric of Travandrum, with suffragan bishopric of Tiruvella.

Under the Sacred Congregation of **Propaganda Fide**:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere and the Prefecture Apostolic of Indore.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam, Nagpur, Bezwada and Cuttack, the Prefecture Apostolic of Jubbulpore, and the Mission of Bellary.

The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Delhi and Simla, with suffragan bishopric of Lahore and the Prefectures Apostolic of Kashmere and Multan.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar, Trivandrum and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,400, and over 9,000 nuns. The first work of the clergy is parochial ministrations to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high

schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education in 1936 exceeded half a million. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujarat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which is forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplains are derived mainly from Europe, that is, from the collections of the *Society for the Propagation of the Faith* and of the *Holy Childhood*, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkeis, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated: Calcutta, 1914; Bombay, 1919; Madras, 1921. There are 17 chaplains on the staff. Some of these are attached to the Scottish battalions in India, while the others minister to the civil population of the towns where they are stationed and to those living in the smaller outstations in their respective areas. In addition to the regular establishment, there are a number of ministers throughout India who are maintained by the various communities to whom they minister and by the Additional Clergy Societies in India; Missionaries of the Church also maintain regular services in English in many centres. There are three Presidency Senior Chaplains in charge of this branch of the Church work in Bengal, Bombay and Madras respectively.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium of instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras.

In the Punjab Evangelistic work is being carried on from eight centres and the baptised Christian community now numbers over 30,000. Work commenced in Bangalore in 1870 is now carried on throughout the whole Eastern Himalayan district and there is a Christian community there of over 15,000. In the eight mission districts of Calcutta, the Eastern Himalayas, Madras, Santal, Rajputana, Nagpur, Western India, and the Punjab there were at the end of 1935 over 70,000 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much for education in India. The Church in Bombay has six representatives on the Governing body of the Anglo-Scottish Education Society, and exercises pastoral supervision over the Bombay Scottish Orphanage. The now well-known St. Andrew's Colonial Homes at Kalimpong, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now over twenty cottages, and about

700 children in residence. The Church has many schools in all parts of its field, and it has also made a large contribution to the work of higher education in India through five Christian Colleges. The Scottish Christian College Calcutta, is well-known. The Macdonald College, which has been rebuilt on the site at Tambaram and which has the meeting place of the world Mission Conference, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, Hislop

College, Nagpur, and Murray College, Sialkot. The Church also carries on important medical work. There are nineteen Mission Hospitals at different centres, among which are four ex-clusive Women's Hospitals at Calcutta, Poona, and Bombay. Further reports of the Church in "Reports of the Church of Scotland, Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 217 missionaries and 887 Indian and Singhalese workers. Connected with the Society are 505 Indian and Singhalese Churches, 285 Primary Day Schools, 25 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1938 stood at 27,119 and the Christian community at 69,729. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where there are hostels for the preparation of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College with its Royal Charter granted by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of Purchase of the Settlement of Serampore in 1845, was placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary educational operations, in Arts and Theology. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

In Arts and Science the College prepares for the Calcutta Examinations. *Principal:* Rev. G. H. C. Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 8 Hospitals. Two large Printing Presses for both English and Verna-

cular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev. D. Scott Wells; 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Farnival Street, Holborn, London. The total expenditure of the Society for 1938 amounted to £162,406 of which £89,527 was expended in India and Ceylon.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu and Oriya Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 20 stations and 632 out-stations with a staff of 101 missionaries including 8 qualified physicians, and 1,525 Indian workers, with Gospel preaching in 1,659 villages. Organised Churches number 126, communicants 31,144 and adherents 26,719 for the past year. Forty-nine Churches are entirely self-supporting. In the Educational department are 495 village day schools, with 23,800 children, 12 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils. There are 6 Hospitals, two leper-asylums and an Orphanage. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 50 per cent. Indian Secretary: The Rev. G. P. Buss, Cocanada.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY. organized in 1814, has Missions in Burma begun 1813; Assam, 1836; Bengal and Orissa, 1836; South India, 1840. It owes its origin to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 32 main stations of the Mission in Burma, 11 in Assam, 10 in Bengal and Orissa, and 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic, educational and medical, and the training of the indigenous pastors, preachers and Bible-Women, and extends to many races and languages. The most important result of its work in Burma has been the practical transformation of the Karens and the Kachins whose languages have been reduced

to writing by the Mission. The Chins of the Chin Hill Tracts are also progressing along these lines under the influence of the Mission. The work in Assam embraces 11 different languages, and great efforts are being made amongst the employees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

In the year 1933 the field staff numbered 284 missionaries, 6,286 indigenous workers. There were 2,960 organised Churches of which 2,335 were self-supporting. Church members numbered 3,15,113. In the 2,371 Sunday Schools were enrolled 1,05,762 pupils. The Mission conducted 2,257 schools of all grades, Judson College at Rangoon and the Agricultural School at Pynmana being among them, with 89,069 students enrolled. 13 hospitals and 34 dispensaries treated 12,902 inpatients and 1,19,318 outpatients. Christians of all communities among whom the Mission works, contributed over Rs. 6,42,654 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836, and has 11 main stations staffed by about 45 missionaries. There are 854 native workers, 982 organized churches, 64,154 baptised members, 423 schools of all grades including 2 High, 2 Normal, 3 Bible and 10 station schools. 4 Hospitals and 5 Dispensaries treated 2,184 in-patients and 25,467 outpatients during the year. Mission work is carried out in 11 different languages.

Treasurer and Corresponding Secretary: Miss Marion G. Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION.—commenced in 1836. Area of occupation: Midnapore district of Bengal, Balasore district of Orissa and Jamshepur Town of Bihar. Work chiefly for Oriya and Santal peoples.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 27 Australian workers. There are 3,650 communicants and a Christian community of 6,791.

Secretary. *Feld Comm.* The Rev W. G. Crofts, Mission House, Barisal, P. O. Hattibganj, Dist. Mymensingh, E. Bengal.

THE STRICT BAPTIST MISSION.—Has 20 European Missionaries, and 215 Indian workers in Madras, Chingleput, Salem, Rannad and Tinnevely Districts. Communicants number 1,657: organised churches 38; Day and Sunday schools 192, with 4,311 pupils.

Treasurer: Rev. D. Motling, Kovilpatti, Tinnevely District.

Secretary: Rev. D. A. Thrower, Filpauk, Madras.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION—Operates in Gujarat and Kathiawar with a staff of 34 Missionaries, of whom 12 are clerical, 15 Educationalists, 5 are Doctors and 3 Nurses. The Indian staff numbers 524, of whom 22 are Pastors, 98 Evangelists, 2 Colporteurs, 49 Bible-women, and 353 are Teachers. There are 21 Organised Churches, a communicant roll of 3,135, and a Christian Community of 9,113. In Medical work there are 4 Hospitals and several Dispensaries, with 3,197 in-patients, 25,057 new cases, and a total attendance of 70,527. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantij and 96 Vernacular schools affording tuition for 7,297 pupils; also 1 crèche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad, a Divinity College at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 7 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts with Farm Colonies attached. A hospital has been opened in Dohad.

Secretary: Rev. George Wilson, B.A., Rajkot.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of this Church was established at Sialkot in the Punjab, in 1855. It is now carrying on work in eight

civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 81. Its educational work comprises one Theological Seminary, one College, four High Schools, one Industrial school, 8 Middle schools and 83 Primary schools. The enrolment in all schools in 1939 was 10,134. Medical work is carried on through five Hospitals and 7 Dispensaries. The Communicant membership of the Church which has been established is 45,461 and the total Christian community 99,988. **General Secretary:** W. H. Muniam, M.A., American Mission, Gujarawanwala.

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections known as the Punjab (1834) North India (1836), and Western India (1870) Missions. According to statistics for the year ending March, 31, 1939, the American staff, including women and special-term Missionaries numbers 221, and the Indian staff 904. There are two and thirty main stations and 165 out-stations. Organised churches number 107 of which 40 are entirely self-supporting. There are 14,263 communicants and a total baptised community of 47,177.

Educational work as follows:—Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for Women,—students about 3,000; one Theological College, students 28 and an interest in Poona Theological College; two Training Schools for Village Workers, twelve High Schools, two Industrial Schools, three Agricultural Demonstration Farms, four Teachers' Training Departments; The Miraj

Medical School and an interest in the Ludhiana Medical College for Women; 119 Elementary Schools; 166 Schools of all grades,—pupils about 11,342.

Medical Work.—Eight Hospitals; Seventeen Dispensaries.

Evangelistic Work.—223 Sunday Schools, with an average attendance of 5,722 pupils. Contributions for church and evangelistic work, on the part of the Indian church, have increased slightly, and amount to Rs. 35,362.

The Hospital at Miraj, founded by the late Sir William J. Wanless and under the care of R. H. H. Goheen, is well-known throughout the whole of South-West India, and the Forman Christian College of Lahore, under the principalship of Dr. S. K. Datta, is equally well-known and valued in the Punjab. The Ewing Christian College (The Rev. C. H. Hazlett, Principal) and Allahabad Agricultural Institute (Dr. S. Hazenbottom, Principal) have grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions, in India.—The Rev. J. B. Weir, Ph.D., D.D. "Lowriston," Delira Duu, U.P.

Secretary, North India Mission.—The Rev. K. L. Parker, Ph.D., A. P. Mission, Fatehgarh, U. P.

Secretary, Punjab Mission.—The Rev. H. J. Strickler, D.D., Mission Compound, Shahdara Mills, Punjab.

Secretary, Western India Mission.—Mr. J. L. Goheen, LL.D., A. P. Mission, Sangli, S.M.C.

THE NEW ZEALAND PRESBYTERIAN MISSION.—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Rev. J. L. Gray, Jagadhri, Dist. Amballa.

THE UNITED CHURCH OF CANADA MISSION.—14 main stations in Jhar, Jaora, Sitamau, states. The Mission workers 200. This

Mission works in conjunction with the Malwa Church-Council and also the Ratlam Church Council of the United Church of Northern India, which reports for this part of its territory. Organised churches 52; Unorganised churches 4; Communicants 3,851; Baptised non-communicants 21,678; Unbaptised adherents 8,953; Total Christian Community 34,514.

Educational work comprises Elementary and Middle Schools for boys and girls; a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Union Theological Seminary. Women's industrial work is carried on in Mhow and Ratlam, and Vocational Training for boys is a feature of the Kasalpur Boys' School, where training is provided in printing, tailoring, carpentry and welding.

The medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and out-stations.

General Secretary of Mission:—Rev. J. T. Taylor, B.A., D.D., Indore.

Associate Secretary of Mission:—Miss F. E. Clearihue, Kharua, C. I. (Via Mehidpur Road Station).

Secretary of Malwa Church-Council:—Rev. J. W. Netram of Sehore, C.I.

Secretary of Ratlam Church Council:—Rev. C. E. Grant, Banswara, S. Rajputana.

THE CANADIAN PRESBYTERIAN MISSION operates in two sections, the Northern Section with headquarters at Jhansi in the U.P., and the Central India Section, known as the Southern Bhil Field.

In Central India the Mission comprises within its area the States of Alirajpur, Barwani, Jobat and Kathiawar also parts of the States of Jhabua, Chhota Udaipur (in the Bombay Presidency) and Dhar, Indore and Gwalior bordering on the Jobat-Barwani Road. The five central stations are Amkhut, Mendha and Alirajpur located in Alirajpur State, Jobat in the State of Jobat and Barwani in Barwani State. The staff consists of 16 missionaries and 50 Indian workers. There are several elementary schools in the area and a central Anglo-Vernacular School at Amkhut in which upwards of 300 children are being educated. At Amkhut also there is a Children's Nursery Home, and a Dispensary with a Christian English graduate Doctor, ministering to his own people. At Jobat there is a General 80 bed Hospital with a Canadian Medical man, Dr. W. R. Quinn in charge.

There are in the district 7 organized and 2 unorganized congregations with a Communicant membership of 375 and a baptized community of slightly over 1,500.

Secretary:—Dr. W. R. Quinn, Tobat, Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of 9 missionaries and twenty-five Indian workers who are engaged in Jhansi city, Esagarh, Baragaon, Babina and the surrounding villages.

Activities include Anglo-vernacular middle schools for both boys and girls and hostels for Christian pupils in each. There are also an orphanage for children under school age, a dispensary. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary.—Mrs. A. Mackay.

THE WELSH FALVISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 10 missionaries and 1,000 Indian workers, present in the States of Jhansi, Esagarh, Baragaon, Babina and the surrounding villages. The Khasi language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicant number 48,054; the total Christian community

128,677; organised Churches 792. Elementary schools number 748. Scholars 26,047; in addition to Industrial Schools and Training Institutions 3 Theological Seminaries, Sunday Schools 1,033. Four Hospitals and several Dispensaries provide annually for more than 20,000 patients.

Secretary: Rev. G. Angell, Jones, P.O. Jowai Shillong, Assam.

THE ARCOT MISSION OF THE REFORMED CHURCH.—(In America). Organised in 1853 and occupies most of the North and South Arcot and Chittoor Districts in South India with a staff of 42 Missionaries, 576 Indian Workers; Churches 15. Communicants 8,251. Total Christian Community 23,683. Boarding Schools 17. Scholars 1,268. Theological Seminary 1.

Students 37. Voculces College 1. Students 224. High Schools 4. Students 1,682. Training Schools 2. Students 135. Industrial Schools 2. Students 207. Agricultural Linn 1. Students 150. Elementary Schools 149. Students 7,717. Hospitals 2. Dispensary 1. In-patients 2,782. Out-patients 47,251, excluding the Union Medical College Hospitals and Dispensaries. Vellore, staff 71.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarters of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Arogiavaram P.O., Chittoor District.

Secretary:—Rev. C. R. Wieringa, M.A., D.D., Vellore, N. Arcot.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—The American Board of Commissioners for Foreign Missions has two large missions, the American Marathi Mission and the Madura Mission. The Marathi Mission covers a considerable portion of Bombay Presidency with centres at Bombay, Ahmednagar, Rahuri, Vadala, Sirur, Sholapur, Satara and Wai. It was established in 1813. The first American Mission in India. Its activities are large and varied. The staff for 1939 included 27 missionaries and 345 Indian workers, operating in 11 stations and 151 outstations. There are 67 churches with 6,582 communicants. Besides conducting 5 secondary and training schools with 940 pupils, the mission has a large share in various union educational enterprises. There are 54 primary schools and 11 kindergartens with a total of 3,597 pupils. In the hospitals and dispensaries during the year, were treated a total of 71,088 patients. The mission has six major social service centres and four out-stations staffed by 40 workers. During 1939 these rendered various services to 565,546 persons. *Secretary*: Miss E. Loleta Wood, Rahuri, Dist. Ahmednagar.

MADURA CHURCH COUNCIL.—Of the South India United Church. This body administers all affairs connected with the Church and with elementary education in the villages. The *Secretary* is Rev. Paulraj Thomas, B.A., B.D., Tirumangalam, Madura Dist.

MADURA MISSION SANGAM.—This Sangam now carries on all the work formerly administered by the Madura Mission, except the American College. The institutions under the Sangam are:—

The Pasumalai High and Training School for Boys; The Capron Hall Training School for Girls; The O. C. P. Memorial High School for Girls, Sakkikulam, Madura. The Union Theological Seminary, Pasumalai; The Lucky Perry Noble Institute for Women; The Willis E. Pierce Memorial Hospital for Men and the Hospital for Women and Children; The Trade School, Pasumalai.

Secretary.—Rev. E. E. White, B.A., B.D., Manamadurai, Ramnad Dist.

THE AMERICAN COLLEGE, MADURA.—The American College, then located at Pasumalai, was affiliated with the University of Madras as a second Grade College in 1881. In 1904 the College Department was removed to Madura where for five years it was accommodated in what is now the Union Christian High School building. In 1909 the College was removed to its present site in Tallakulam on the north side of the Vamai river. It was affiliated as a First Grade College in 1913.

In 1934 at the time of the centenary of the Mission, the American College became organically independent under its own Governing Council. In the same year it was granted affiliation as an Honours College.

The present College site comprises about forty acres. On the College grounds are located the Main College Hall, the Ellen S. James' Hall of Science, Binghamton Hall, the Chapel, Daniel Poor Memorial Library, Main Hostel, Zumbro Memorial Hostel, Dining Halls, Principal's residence, Warden's Lodge, four additional bungalows, and athletic fields.

AMERICAN MADURA MISSION—*Secretary*. Rev. John J. Bannunga, M.A., D.D., Pasumalai, Madura Dist.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—The mission staff in Khandesh is represented by 27 missionaries and 64 Indian Workers. There are 602 Church members and 1,349 pupils in Sunday Schools. 32 Elementary Schools provide for 777 pupils.

Secretary.—Miss Olga E. Noice, Chinchpada, West Khandesh.

THE SWEDISH ALLIANCE MISSION.—Working among Bhils, Hindus and Mohammedans in West Khandesh, has 18 missionaries and 80 Indian workers. There are 8 congregations with a total membership of 1,224 of whom 624 are communicants. There are 15 Elementary Schools, 2 Training Schools and 5 School Homes. The pupils in all schools number 646.

Secretary.—Miss Elin V. Anderson, Shirpur, West Khandesh.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore State. The Mission engages in every form of Missionary activity.

UNION INSTITUTIONS.—With which the London Missionary Society is connected, and is a contributing Body. Number of Institutions: 13; Schools, 6; Scholars, 2,510; Colleges, 7; Students, 1,156.

The European Staff of the Society numbers 81, Indian Workers, 2,416. Organised Congregations, 900, Communicants, 81,860. Christian Community, 204,031. Christian Colleges, 1. Students 179; Training Institutions, 4. Students: 257; High Schools 12. Boarding Schools 25; Boarders, 1,968; Elementary Schools, 674; Elementary Scholars, 58,767. Head-Station, 22. Out-Station, 1,048. In Medical Work Head Station Hospitals number 6; Out-Station Hospitals, 13, Dispensaries 2, Number of Beds 757. In-patients, 15,156, Out-patients, 211,598; Doctors, 38 (including 8 Europeans); Assistants 33, Nurses, 76 (including 8 Europeans); Theological Institutions, 2, Students, 48.

The main centres of the Mission in N. India are at Calcutta and Murshidabad District, Bengal; L.M.S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City, or which the Rev. S. R. Holt of the W. M. S. is Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras. The S. India district and Travancore are divided into Kanares, Telugu, Tamil and Malayalam fields with 22 stations and 1,048 out stations. At Nagercoil (Travancore) is the Scott Christian College and High School with 985 students, a Church and congregation said to be the largest in India and a Printing Press, the centre of the S. Travancore Tract Society.

India—Secretary and Treasurer.—Rev. L. J. Thomas, 18, Lavelle Road, Bangalore.

Bengal Secretary.—Rev. Hilary A. Wilson, B.A., 1, C. Ashutosh Mookerji Road, P. O. Elgin Road, Calcutta.

Benares Superintendent.—Rev. S. R. Holt, Ramkatora, Benares Cantonment, U. P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work, Berar Province much earlier. Work is carried on in the Provinces of Berar, Khandesh and Gujarat. There is a staff of 50 missionaries and 80 Indian workers. The number of mission stations and pastors is 15 with 16 out stations. There is a Christian community of 2,100 adults. There are 4 Boarding Schools, 2 for boys and 2 for girls. There is one English congregation at Bhusawal.

Executive Secretary.—The Rev. E. R. Garner, Akola, Berar, C.P.

THE CHURCH OF THE BRETHREN (AMERICAN).—Opened work in 1895, and operates in Broach, Surat and Thana Districts, also in Baroda and Rajpipla States. Its staff number 42 foreign workers including missionaries' wives, and 212 Indian workers. The baptized (nursed) membership stands at 6,867. Education is carried on in 2 Boys' Boarding Schools, 2 Girls' Boardings, and in 3 Co-educational Boardings with separate hostel quarters. Village Day Schools number 112. Females under instruction number 942, males 3,465, total 4,407. There are 103 Sunday Schools having 177 teachers, and a total enrolment of 4,281. There were 44,550 calls at Mission dispensaries in 1938. The foreign medical staff consists of three doctors, and three nurses. Industrial work is carried on in 5 of the Boarding Schools. A vocational school, including teachers' training, village trades and agriculture for boys and a school of practical arts for girls are conducted at Ankleswar. Evangelistic, Temperance and Publication work receive due emphasis.

Secretary.—L. A. Bickenstaff, 82 Mahatma Gandhi Road, Bombay.

THE POONA AND INDIAN VILLAGE MISSION.—Founded in 1893. Mission Stations.—Poona City, Khed Shivapur, Poona District; Nasrapur and Bhori (Bhor State), Poona District; Lonand, M. S. M. Ry., Satara District; Phaltan, (Paltan State); Satara District; Pandharpur, Sholapur District; Nateputa, Sholapur District; Akuluz, Sholapur District; Shirwal, Poona District; Khed, District Ratnagiri; Mahod, District Sholapur.

The Staff consists of 45 European and 48 Indian workers, with a community of about 200 Indian Christians and their families. The main work is evangelising in the villages, women's zenana work, and primary education. Medical work is conducted at most station, with a hospital at Pandharpur. Mission Headquarters, 17, Napier Road, Poona.

Secretary.—Rev. S. D. Davidson.

THE AMERICAN CHURCHES OF GOD MISSION.—Has four missionaries at Bogra, two at Khanjanpur, Bogra District, Bengal and two at Ulubaria, Howrah District, Bengal.

President.—Rev. H. W. Cover, M.A., Bogra, L. B. Railway.

Secretary.—Miss Eunice Catlin, *Mission House*,—Khanjanpur, Via Jaypurhat, Bogra District.

THE INDIA CHRISTIAN MISSION.—Founded in 1897, has 41 Organised Churches, 17 Missionaries, 53 stations and out-stations, 1,759 Communicants, 30 Primary schools and also Station at Dodballapur, near Bangalore,

S. India, also Colony of Courage (Hindu and Industrial Colony for Anglo-Indians) **Champawat**, Almora, U. P., stations also in Nuwara Eliya, Mulpotha, Uva Province and Polgahawella, Ceylon; Girls' Orphanage at Nuwara Eliya; Industrial Homes for Anglo-Indian Children, Nuwara Eliya. Total Christian community 4,992. Magazines:—English *Missionary Notes*

Directors:—Rev. Arnold Paynter, Champawat, Almora, U. P. and Mrs. A. L. Paynter, Nuwara Eliya, Ceylon.

THE CHURCH OF THE NAZARENE MISSION.—Has its headquarters for India at Buldana, Berar, where it has a Boys' Boarding School. In Chikhli, 14 miles from Buldana there is a Girls' Boarding School. At Basim, Berar, 85 miles from Buldana there is a Day School, a Bible Training School and a Women's and Children's Hospital. At present there are 11 missionaries in India and a force of 46 Indian Preachers, Teachers and Bible women.

Mission Chairman: Rev. John McKay Basim, Berar, C.P.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION:—Has four missionaries in India. They are Rev. and Mrs. Arthur J. Calhoun, Adra, B. N. Rly., and Miss Emma K. Landis and Miss Grace Haven, Raghunathpur, Mandla District.

THE INDIAN MISSIONARY SOCIETY, TINTVELLY (DOERNAL MISSION)—Opened in 1903, operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Palars in the British and Travancore Hills. It is the missionary effort of the Christians living in India and overseas. There are now nearly 14,000 Telugu Christians in 154 villages and 550 Palyar Christians in the hills. The Society publishes monthly *The Missionary Intelligence* containing information about the Society's work in both the fields.

Secretary:—Rev. D. D. Rajamani, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874.

An interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untamed children, working in 20 countries but largely in India, Burma, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India and Burma alone the Mission now has 34 Asylums of its own with upwards of 7,500 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India and Burma over 10,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases, both adults and children, are now benefiting.

Most of the Mission's income is derived from voluntary contributions. Some funds are raised in India and Burma but the bulk of the money expended by the Mission in India and Burma is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which Lady Lumley, Lady Margot Laskine, Lady Hulbeck and Lady Wyke are Vice-Presidents.

Hon. Treasurer.—William McIntyre, c/o Macneil & Co., 2, Fairlie Place, Calcutta.

Hon. Treasurer, Bombay:—R. C. Lowndes, c/o Messrs. Killick, Nixon & Co., Bombay.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 7, Bloomsbury Square, London, W. C. 1. The Secretary for India is Mr. A. Donald Miller, Patna, Bihar.

THE REGIONS BEYOND MISSIONARY UNION.—An inter-denominational Society which commenced work at Motihari Bihar in 1900, and now occupies 6 stations and 9 out-stations in the Champaran and Saran Districts, with a staff of 30 European and 3 Indian Missionaries and 40 other Indian workers. The Mission maintains 1 Hospital, 1 Girls' Orphanage, 1 Women's Home, 1 Boys' Orphanage and Boarding School with a Carpentry industrial department, and 1 M. E. School with 200 pupils. Communicants number 200.

Secretary:—Rev. S. W. Law, Motihari, Champaran, Bihar.

THE RAXAUL MEDICAL MISSION, affiliated with the Regions Beyond Missionary Union, has 1 Hospital at Raxaul, Champaran District, with 1 married European Doctor, 2 European Nursing Sisters—1 European Evangelist and 1 European Lady Evangelist and 14 Nepalese and Indian workers.

Secretary:—Dr. H. C. Duncan.

THE NATIONAL MISSIONARY SOCIETY OF INDIA—Established 1905, started, financed and managed by Indian Christians; has a staff of 27 Missionaries and 163 helpers and voluntary workers; operates in Montgomery District (the Punjab), Ferozabad (U. P.), Halaaghat, Mymensingh District (Bengal), Murwahi (C. P.), North Kanara, Mirajgaon (W. India), Pargal Taluk (Nizam's Dominions) and Tirupattur Taluk (N. Arcot). Direct evangelistic work from 50 Centres in 9 language areas; Inter-denominational: Thirty-four Elementary Schools with two hostels for boys and one for girls, one High School with hostel, one First Grade College with Hostel, one printing press, three dispensaries, two Hospitals and one Child Welfare Centre. Annual expenditure Rs. 50,000 excluding self-supporting institutions. *The National Missionary Intelligence* (a monthly journal in English sold at Re. 1 per year post free), *Deepikai* (a monthly journal in Tamil) at 8 annas per year, post free.

Address:—N. M. S. House, Royapettah, Madras.

President:—The Rt. Rev. S. K. Tarafdar.

General Secretary:—Mr. Thomas David, B.A., B.L., S. T. M. Madras.

THE SEVENTH-DAY ADVENTIST MISSION.—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of 530 workers, European and Indian, including one hundred and fifty-six ordained and licensed

ministers. Evangelistic and educational work is conducted in sixteen vernaculars, beside work for English-speaking peoples in the large cities. For administrative purposes, there are five branch organizations located as follows:—

Seventh-day Adventist Mission—Western India. (Pastor N. C. Wilson, Superintendent.) *Office Address:* Salisbury Park, Poona.

Seventh-day Adventist Mission—Burma. (Pastor J. O. Wilson, Superintendent.) *Office Address:* 30, Voyle Road, Rangoon, Cantonment, Burma.

Seventh-day Adventist Mission—Northeast India. (Pastor F. H. Loasby, Superintendent.) *Office Address:* "Baragun", Ranchi.

Seventh-day Adventist Mission—Northwest India. (Pastor I. F. Blue, Superintendent.) *Office Address:* Regal Buildings, New Delhi.

Seventh-day Adventist Mission—South India. (G. G. Lowry, Superintendent.) *Office Address:* 9, Cunningham Road, Bangalore.

The general headquarters for India, Burma and Ceylon is located at Salisbury Park, Poona. N. C. Wilson, President; A. E. Nelson, Secretary and Treasurer. (*Office Address:* Post Box 15, Poona). On the same estate is an up-to-date publishing house devoted to the printing of health, temperance, evangelic and associated literature. (*Address:* Oriental Watchman Publishing House, Post Box 35, Poona).

A large number of day and boarding vernacular and Anglo-vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institution, and in many cases, to engage in some trades or other work.

Eight physicians, one maternity worker (C.M.B.) and a number of qualified nurses are employed, regular medical work being conducted at thirty-two stations.

The baptized membership (adult) is 6,302 organized into 129 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 368 Sabbath Schools are conducted with an enrolled membership of about 13,000.

The Bombay address is No. 15, Club Back Road, Byculla.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 35, Indian workers 140. Church members 1,446, children (unbaptized) 930. Industrial Training Institutions 1, Academy including High School, Normal School and Bible School—Anglo-Hindi Middle School 2, Elementary Schools 11, Orphanages 2, Women's Home 1, Hospital 1, Dispensaries 7, Lepers Home 1, Home for untainted children or Lepers 2, Lepers Clinic 4, Farm Village projects 2.

Secretary: J. D. Graber, Dhamtari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION.—Started in 1901 in the C. Provinces. Workers number 22; Leper, Medical Orphan, Zenana, Evangelistic, Educational and Industrial work carried on. *Secretary:* Rev. F. J. Isaac, Mauhadhi, via Champa, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION.—Established 1890 in the C. P. and Berar, has a mission staff of 13, Indian workers 15, Churches 5, Communicants 586; Christian Community 560; 2 Boarding Schools with 50 boarders and 2 Elementary Schools.

Secretary.—Rev. Carl Wyder, Ellichpur, Berar, C. P.

THE CEYLON AND INDIA GENERAL MISSION.—Established 1892, occupies stations in Mysore State, in the Coimbatore and Anantapur Districts, also in the United Provinces. Mission staff 45; Indian workers 61; Churches 11; Communicants 867; Christian community 2,550; Orphanages 4; Schools 4; Pupils 281.

Secretary.—W. H. W. Paget, "Mizpah," Richards Town, Bangalore.

THE BOYS' CHRISTIAN HOME MISSION.—Was founded by Rev. Albert Norton in 1899 during a time when a serious famine swept the land. The Headquarters of the Mission is Dhond.

At present the Mission staff consists of seven missionaries and 48 Indian workers. There are two elementary schools, one at Dhond, Poona District, and one at Oral, U. P. There is also a girls' school at Oral. The total strength of the schools is over 260. At Dhond there are two orphanages, one for boys and one for girls, and a small attempt is being made to start agricultural work, using improved methods.

The mission consists of two main stations, one at Dhond, Poona District, and another at Oral, United Provinces, with two out-stations in the U. P., one in Jalaun and the other in Kalpi.

The function of the mission is chiefly, the care of orphan boys and girls and evangelistic work in neglected villages.

Director.—Rev. John E. Norton.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an inter-denominational society, with headquarters, 23, Surrey Street, London, working among women and girls in 5 stations in the Bombay Presidency, 7 in United Provinces, and 4 in the Punjab. There are 57 European Missionary ladies on the staff and 50 Assistant Missionaries, 202 Indian teachers and nurses and 31 Bible women. During 1938 there were 5,818 in-patients in the three hospitals supported by the Society (Nasik, Lucknow and Patna). There were 24,033 out-patients, 108,958 attendances at the Dispensaries. In their 21 Schools were 2,013 pupils and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,181 women were regularly taught. Total expenditure in India £45,075.

Hon. Treasurer: Rev. Roland A. Smith, M.A.

Hon. Finance Secretary : Rev. E. S. Carr, M.A.
President.—The Lady Kinnaird.

Secretaries.—Rev. H. S. Gregory, M.A., and Miss N. Lampont.

WOMEN'S CHRISTIAN MEDICAL COLLEGE with which is incorporated **THE PUNJAB MEDICAL SCHOOL FOR WOMEN.** In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influence to Indian women. Doctor Edith Brown, D.B.E., M.A., M.D., M.C.O.G., etc. was its Founder and Principal. The School is Inter-denominational, and trains students for various Missionary Societies.

The Memorial Hospital in connection with the College has 279 beds and 54 cots.

In 44 years 360 medical students qualified as Doctors, besides 160 Compounders, 233 Nurses and 970 Midwives and Nurse Dais. Nurses and Compounders also do midwifery and are included in this last figure.

The College has been affiliated to the Punjab University for the first two years of the M.B.B.S. course, and it is hoped to attain full affiliation in due course.

There are in training at present 16 M.B.B.S. students, 133 Licentiates, 57 Nurses, 16 compounders, 2, Mother craft pupils and 104 Nurse Dais and Midwives, making a total of 327 women being trained, besides Indigenous Dais receiving instruction at the Health Centres run in connection with the Hospital. There are 3 City Centres, and 1 Village Dispensary.

During the year 1939 there were 4,571 In-Patients, and 63,519 Out-Patients.

The Radium and Deep X-Ray Therapy departments are meeting a great need, and show good progress, and the fight against Tuberculosis is increasing in intensity. Tuberculosis Clinics are held, and city visiting is done on a comprehensive scale, while patients are admitted to a Garden Sanatorium outside the Hospital.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organised activities for women's work in the city. The Social Training Centre for women is now an integral part of the work of the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden:—O. M. Kane, B.Sc. (London): Reynolds Road, Byculla, Bombay.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925), the well-known work of the late Pandita Ramabai, shelters about 700 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss Eunice Wells, Secretary-Treasurer.

Disciple Societies.

The India Mission Disciples of Christ, under the United Christian Missionary Society, Indianapolis, Indiana, U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 50 missionaries, including missionaries' wives, and 214 Indian workers. There are 17 organized churches with a membership of 2,721, and a Christian community of 5,000. There are 3 hospitals and 4 dispensaries, in which 2,547 in-patients and 13,663 out-patients were treated last year.

The Mission runs 3 boarding schools for girls and 1 for boys, with 2 hostels for boys, and the inmates number 410. There is one Lepet Asylum with 120 inmates. A Tuberculosis Sanatorium admitted 263 patients during the year. An Industrial School is conducted at Damoh in connection with which a 400 acre farm is used for practical work. The Mission Press at Jubbulpore printed last year about 3,000,000 pages of Christian Literature, 2 Industrial Schools, 2 High Schools, 3 Middle Schools and 12 Primary Schools, with about 1,574, under instruction.

The Australian Branch has 3 Mission Stations in the Poona District. The Great Britain and Ireland Branch have stations in Mirzapur District of the U.P. and Palawan District in Omsa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer: W. B. Alexander, Jubbulpore, C.P.

Inter-denominational Missions.

"THE CENTRAL ASIAN MISSION. Founded 1895. Head Office, 47, Victoria Street, London, S.W.1; base on the N.W. Frontier at Mardan; advance stations at Bandapur, Kargil, Shigar, and Khapalu. Protestant, Evangelical inter-denominational. 11 European Missionaries.

THE FRIENDS' SERVICE COUNCIL.—The Friends' Service Council works in five stations of the Hoshangabad District and in two stations in Central India.

The Church, which is composed of 6 Monthly Meetings united in the Mid-India Yearly Meeting, is largely organised on the lines of the Society of Friends in England.

There are 13 missionaries, 11 on the field and 2 on furlough, also 3 retired missionaries living in the district.

The principal activities are a general hospital with dispensary and nurses' training department, a Primary School and an Anglo-Vernacular Middle school at Itarsi; a Boarding school for girls with Primary and Anglo-Vernacular Middle Departments at Sohagpur; a Home for older girls in Sohagpur where toys are made for sale, a Boys' Hostel at Hoshangabad for boys attending Primary, Middle and High schools there. The Council's work also covers two villages in the Seoni Tahsil of the Hoshangabad district in one of which, Makoliya, there is a dispensary and a Primary School.

An Ashram is maintained near Hosangabad, where village problems are studied, and work of an educational and social nature is carried on. Wardens, Ranjit and Doris Chetsingh.

There is also a Weavers' Colony at Khera, Itarsi, where cloth is made on hand-looms.

The Council has 185 members and 1,460 adherents. Mission Secretary Miss M. Finch, Sohagpur, C.P.; Church Secretary: Dhan Singh, Sohagpur, C.P.

THE AMERICAN FRIENDS' MISSION.—With Missionaries working in Bundelkhand, Hospital for Women and Children at Chhatarpur, Boys' school at Harpalpur, Orphanage, evangelistic, industrial and school work at Nowgong.

Superintendent: Rev. Everett L. Cattell, Nowgong, C.I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is the only Hebrew Christian Agency in India. *Hon. Secretary:* Rev. G. F. Westcott, B.C.M.A., 11, Mission Row, Calcutta.

Lutheran Societies

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA.—Commonly known as the United Lutheran Church Mission. Now working in close co-ordination with the Andhra Evangelical Lutheran Church, which was organized in 1927. The mission and Church together carry on work in East Godavari, West Godavari, Guntur, Nellore and Kurnool Districts. Foreign staff on the field in December 1939, 64: Indian staff of all grades, 2,928. Baptised membership 181,884. Schools, 966. Pupils, 44,851. There are a First Grade College, three High Schools for boys, one High School for girls, one Normal Training School for Masters and one for Mistresses, a Theological Seminary, an Agricultural School, seven Hospitals, a school for the Blind, a Tuberculosis Sanatorium and a Printing Press.

President of the U. L. C. Mission: Rev. M. L. Dolbeer, D.D., Rajamundry.

President of Andhra Evangelical Lutheran Church: Rev. L. W. Slater, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN.—A Church of Sweden Society, founded in 1856, occupies the Districts of Sangor, Betul, and Chhindwara in the Central Provinces.

There are about 2,747 Church members constituted into an indigenous Church called the Evangelical Lutheran Church of the Central Provinces. The European and Indian staff numbers 34 and 171 respectively. There is a training school for Indian workers and 25 Primary and Anglo-Vernacular Schools with 1,613 Children in attendance; 45 Sunday Schools with 677 Christian and 1,648 non-Christian attending. 7 Dispensaries with 49,196 patients during 1939. 3 Workshops. One Women's Industrial School: One Widows' Home with 74 women; 3 orphanages with 29 boys and 77 girls; one Boys' Boarding School with 104 boys and one Girls' Boarding School with 112 girls and 3 farms where modern village uplift is attempted.

Secretary:—Rev. R. Asplund, Chhindwara, C.P.

THE BASEL EVANGELIC MISSION with its headquarters in Mangalore, South Kanara,

was founded in 1834 and is at present carrying on the work in the whole field occupied before the war with the exception of North Kanara and the Nilgiris. It has at the beginning of 1940, 28 chief stations and 84 out-stations with a total missionary staff of 36 European and about 800 Indian workers. The membership of the churches is 28,000. Educational work embraces 100 schools, among which a Theological Seminary, a second grade college and 7 high schools. The total number of scholars is 18,000. Medical work is done at Betgeri-Gadag, Southern Mahratta Country, where a hospital for men and women and at Udipi, South Kanara, where a hospital for women and children is maintained. The Mission maintains a Home Industrial Department for women's work. There is also connected with the Mission a large Publishing Department with a Book Shop and a Printing Press with about 150 workers, at Mangalore, S. Kanara, which is doing work in English and in a number of Indian languages.

President and Secretary.—Rev. A. Streckeisen, Calcutta, Malabar.

THE FEDERATION OF EVANGELICAL LUTHERAN CHURCHES IN INDIA was established in 1926 as an outward expression of the spiritual unity of the Lutheran Churches in India. It consists of 9 constituent churches and 3 co-operating Missions in India with a total membership of over 400,000. The work of the Federation is carried on by the Triennial Conference of the Federation, by its Executive Council, by a number of standing and special Committees and by its office-bearers.

The office-bearers for 1939-41 are as follows
President and Treasurer:—Rev. P. Paradesi, B.D., Luthegiri, Rajamundry.

Vice-President:—Rev. J. Roy Strock, M.A., D.D., Vegeswarani, West Godavary District.

Secretary:—Prof. J. D. Ashvadan, M.A., L.T., Madras Christian College, Tambaram, S. I. Rly. Tel. Address, Krupalaya, Tambaram, S. I.

THE CHURCH OF SWEDEN MISSION was founded in 1874. It operates in the Trichinopoly, Coimbatore, Madras and Rannad Districts. In conjunction with the Leipzig Evangelical Lutheran Mission (L.E.L.M.) it co-operates with the Tamil Evangelical Lutheran Church. The C. S. M. maintains a general and eye hospital at Tirupattur, an eye hospital at Coimbatore, High Schools for boys at Madras and Pudukotah, a High School for girls at Tanjore and various Primary Schools. European staff 39; School Teaching staff 167; Schools 32 Pupils, boys 2,732 and girls 1,112.

President:—Olof Johansson, (C.S.W.M.), Arasacah, Madras.

LIPZIG EVANGELICAL LUTHERAN MISSION.—The Lutheran Mission work in India was commenced in 1796 by German Missionaries under the Danish Tranquebar Mission. It was taken up by the L. E. L. M. (founded in 1836) in 1841. The L. E. L. M. re-entered into the work after the great war in 1927. It is located in the Madras, Chingleput, South Arcot and Tanjore Districts. The Mission co-operates with the Church of Sweden Mission and the Tamil Evangelical Lutheran Church. The L. E. L. M. maintains two High Schools for boys at Madras and

Shiyali (Tanjore Dt.), a number of Elementary Schools for boys and girls in different places, and various other institutions.

Owing to the war, the whole Mission work has been temporarily placed under the Mission Council of the Church of Sweden Mission.

TAMIL EVANGELICAL LUTHERAN CHURCH.—Organised Churches 49; Ordained Indian Ministers 35; other Indian workers 119; Baptised membership 34,894; Schools 236; Teaching staff 701; Pupils: 13,505 boys and 5,109 girls.

President.—*Rev. J. Sandegren, M.A., D.D., L.N.O., Bishop of Tranquebar, Trichinopoly.*

Floyd E. Barker, Bhagadour, *et al* Pardi, Surat District.*

The Free Methodist Mission.—North Indian workers. Organised churches 7, 1 Theological School, 1 Anglo-Vernacular Middle School, 5 Elementary Schools, 1 Dispensary and 5 centres for Clinical and village health work. **Secretary.**—*Miss E. E. Ward, Yeotmal, Berar.*

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander; and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Territory, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to

the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformatory work was commenced). A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Agricultural Colonies Soldiers, and Civilians Hostel, Delhi.

Village centres at which the S. A.

Works	2,109
Officers and Employees	618
Social Institutions	5

Territorial Headquarters—Ferozepur Road, Lahore, Punjab

Territorial Commander—Colonel W. D. Pennick.

Western Territory.—The Western Territory comprises Bombay, Gujarat, Panch Mahals and the Maharashtra.

Territorial Headquarters—The Salvation Army, Morland Road, Byculla, Bombay.

Territorial Commander—Lt. Commissioner H. B. Colledge (Prakram Singh).

Corp. 287; Outposts 485; Societies 473 Social Institutions 16.

Besides the distinctly evangelistic operations there are established a large General Hospital—Elmery Memorial, Anand—Ahmednagar Hospital, Kaira Dispensary and several Dispensaries; 220 Day Schools; 4 Boarding Schools; a Home for Juvenile Criminals; Industrial and Rescue Home for Women; conditionally Released Prisoners' Home; the management of the Bombay Helpless Beggars' Camp; Weaving Schools, Factory for the making of Weaving, Warping and Reeling Machines, and a Land Colony having a population of about 265 Salvationists. Management of the King George V Memorial Infirmary.

Madras and Telugu Territory.—This Territory comprises the city of Madras and the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency.

There are the following agencies at work, where evangelical, educational and social work is systematically done:—363 Corps and Outposts, 132 village primary Schools; 1 Criminal Tribes Settlement, 2 institutions for the training of Officers, 1 Leper Colony at Bajajith with 275 inmates, 1 Hospital for women and children at Nellore, Guntur District; a women's Industrial Home in Madras; a Boarding School for girls, and another for boys of the Salvation Army.

Territorial Headquarters—The Salvation Army, Broadway, Madras, G.P.O. Box 206.

Territorial Commander—Lt. Col. Mashin.

Chief Secretary—Brigadier Edward Walker.

Southern India Territory.—The Territorial Headquarters for this Mission field, which has the largest constituency of any Missionary Territory in the world, is Trivandrum, the capital of Travancore State.

The work of the Army had its beginning among the Tamil-speaking people of the southern part of the State nearly fifty years ago. After a few pioneer efforts of a small zealous band of Salvation Army Officers, who were seeking to establish the Kingdom of God, days of prayer were spent on the hill-side near Cape Comorin. This led to the awakening and gathering into the fold of Christ of hundreds of people, the message sweeping like a flame of fire from one village to another during those early days.

From that beginning the work developed and extended northward through the whole State of Travancore into Cochin, and during the past twenty-five years eastward into the British administered districts of the southern part of the Madras Presidency.

More than five hundred Corps and over one thousand Officer-Labour amongst these village populations who have responded and show abundant evidence of social, material and spiritual elevation.

An example of what has taken place in North Travancore in the communities amongst whom the Army works, if we were to go back thirty years a recognised custom of oppression would be seen. No woman was permitted to cover her body above the waist—a mark of degradation and slavery. At present no Christian woman submits to such indignity, but is clothed and takes her place as a respected member of civilized society.

'Up from degradation' has been the watchword of Salvation Army effort during those fifty years.

The work of this Territory is divided for administrative purposes into twelve Divisions, three amongst the Tamil-speaking people and nine amongst those who speak Malayalam.

Literacy has been another goal. The social barrier which existed for the distressed communities had made it almost impossible for the children of the poor and labouring classes to obtain the most elementary advantage in education. The Army devised methods to bring primary education to the door of these communities. A beginning was made, and now the doors of Government fostered education have been opened wide and thousands of our poor and depressed people have stepped out into a new world of enlightenment and are taking their place as leaders amongst their people.

Medical service commenced in a very humble way. A meagre stock of simple remedies in a bathroom, to which the sick and ailing found their way, has grown into the splendidly equipped Catherine Booth Hospital in Nazareth, with its network of branch hospitals throughout the Territory, treating over five thousand in-patients and over one hundred and fifty thousand out-patients each year.

A splendidly equipped Leper Colony in North Travancore, known as the Evangeline Booth Leper Colony, during the last four years has done wonderful service and now accommodates nearly two hundred patients. In Cochin State the Army on behalf of the Cochin Government looks after and manages the State Leper Colony and renders a splendid service to suffering humanity.

Workers in this territory consist of 1,065 officers and 234 employees, who manage 499 Corps, 817 outposts and Societies, 219 Schools, 16 hospitals and 11 Institutions.

Territorial Headquarters—S. A. Kuravankonnam, Trivandrum, Travancore State.

Territorial Commander—Lieut. Commissioner Chas. F. A. Macneuf.

Chief Secretary—Lieut. Colonel A. J. Hedén.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the *Gazetteer*, "A certain number of English statutes and the English code are to a limited extent still in force in the Presidency Towns as applicable to Europeans while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged in some few particulars to suit the circumstances of India. It is practically impossible to misunderstand the code." The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure

in 1893. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Transfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in British India.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee were to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. One of the law consolidation duties, and it was suggested that a Bill consolidating the existing law relating to merchant shipping, with them as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Gilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged

with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains: but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans. . . . Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted. This in some measure reduced the differences between the trials of Europeans and of Indians under the Code. Since 1836 no distinction of race has been recognised in the civil courts throughout India.

The Federal Court.

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act 1935 accordingly provides (sections 200-218) that there shall be a Federal Court consisting of a Chief Justice of India and such number of other judges as His Majesty may deem necessary; but the number of puisne judges shall not exceed six, unless and until an address is submitted by the Federal Legislature for an increase. Every judge of the Federal Court is to be appointed by His Majesty by warrant under the Royal Sign Manual. He shall hold office until he attains the age of 65 years, but is liable to be removed from office on the ground of misbehaviour or of bodily or mental infirmity, provided that the Judicial Committee of the Privy Council on a reference reports that the judge ought on any such ground to be removed. The Federal Court shall be a Court of Record, and shall sit at Delhi or such other place or places as the Chief Justice may with the approval of the Governor-General from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Federation, any of the Provinces, or any of the Federated States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends. Certain restrictions are placed upon the Court's jurisdiction over disputes to which a State is a party. In the exercise of its original jurisdiction the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment decreed or final order of a High Court in British India, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act, or any Order in Council made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave. The Federal Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court so as to extend to certain civil cases involving large stakes. An appeal also lies to the Federal Court from a High Court in a Federated State on the ground that a question of law has been wrongly decided concerning the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of the Instrument of Accession of the State or arising under Agreement made under Part VI of the Act in relation to the administration in the State of a law of the Federal Legislature.

An appeal may be brought to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of an Instrument of Accession, or under an agreement made under Part VI of the Act. An appeal may also be brought to the Privy Council where special leave is granted either by the Federal Court or the Privy Council. All authorities, civil and judicial, throughout the Federation are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court shall be in the English language, and judgment must be pronounced in open court in accordance with the opinion of the majority of the judges.

The Federal Court was established and commenced to function from 1st October 1937. The Court in the first instance consists of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000, and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C., was appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. R. Jayakar to be judges of the Federal Court.

The functions of the Federal Court are not to be affected in any way by the assumption of emergency powers by the Governor-General under section 45 of the Act in case of failure of the Constitutional machinery.

High Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the

United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown: they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in India or lawyers qualified in India. This fixed proportion of Barrister and Civilian Judges has now been abolished by Government of India Act 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N. W. P. Province and the Central Provinces and Berar the principal legal tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar and Sindh; and a High Court has since January 1936 been established at Nagpur.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails; it is accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted or sentenced and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these post-members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsifs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court; Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Bar Councils Act of 1926 aims at abolishing the

various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council. Under the Government of India Act 1935 it is proposed to appoint an Advocate-General for each of the more important provinces, and an Advocate-General of the Federal Court is also appointed, and he will be the principal law-officer of the Federal Government.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Province.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861. "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which have its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exception of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned and is not now subject to the general control of the Governor-General. The Police in minor provinces, viz., Coorg, Delhi, Ajmer-Merwara, Andaman and Nicobar Islands, and Panth Piploda, and in other centrally administered areas is administered by the Chief Commissioner or the head of the administration concerned, subject to the general control and direction of the Central Government.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District.

But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police and Inspector-General of Police. Generally speaking, the D.S.P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux. There is also a **Central Intelligence Bureau** under the Home Department of the Government of India which collects information from all provincial Criminal Investigation Departments and works for inter-provincial liaison. It has its branches at various centres throughout British India and at Quetta in Baluchistan. The Head of the Bureau known as the Director, Intelligence Bureau, also acts as Advisor to the Home Department of the Central Government in police matters.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with .410 bore muskets. At most headquarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mossy hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who

like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is a police officer. Personal inspection and supervision are the common means for the District Superintendent of Police to know whether his subordinates are doing their work properly.

Out-Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—A constable may aspire to become a Police Station Officer or higher officer. The directly recruited candidate who comes in through the Police Training School as a Thanadar is, it is understood, more often than not a graduate and may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England or from India, is sure of a Superintendentship and has chances of D.I.G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund. Members of the Police Force are eligible for the award of the King's Police Medal and the Indian Police Medal for long and meritorious services and for conspicuous acts of gallantry.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give up to six months or Rs. 200 fine summarily, i.e., without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

STATISTICS OF POLICE WORK.

The undersirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasised in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime:—

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

Since the introduction with effect from the 1st April 1937 of the Government of India Act, the administration of "Jails" is a provincial matter, and the power of legislation in respect of prison administration vests in the Provincial Governments, the Central Government exercising only concurrent legislative powers with the Provincial Governments in the matter of the transfer of prisoners and accused persons from one unit to another.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organisation and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the headquarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the Indian Medical Service. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour.

The Jails Committee.—The obvious advisability of proceeding along certain general lines of prison administration led to the appointment

of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners for employment

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline. These are but general principles which have been variously given effect to by various Provincial Governments.

The question of the treatment of "young adult" prisoners has in recent years received much attention.

Children's Acts and Borstal Schools Acts for the special treatment of juvenile offenders have been passed by several Provincial Legislatures.

The Madras Children Act, passed in 1920, is the earliest and has been largely followed in the other provinces. It classifies as "children" boys and girls under the age of 14 and as "young persons" those between the ages of 14 and 16. It enacts that a child or young person convicted of any offence, may as an alternative to the usual punishments of fine, whipping or imprisonment be discharged after due admonition, committed to the care of a parent, guardian or relative, or of a person named by the court, or sent to an Industrial School set up or certified under the Act. It further enacts that no offender under the age of 16 may be sentenced to transportation, nor under 14 to imprisonment. Offenders between the ages of 14 and 16 may be sentenced to imprisonment in very special circumstances. Provision is made for the committal to an Industrial School or to the care of a suitable person of neglected, ill-treated or uncontrollable children under the age of 14. The Act empowers the Government of the Province to establish juvenile courts consisting of a stipendiary magistrate and one or two Honorary Magistrates who shall, where possible, be women and directs that, where such courts have not been established, young offenders shall be tried in a different room or at a different time from those at which the ordinary sittings are held.

The Bengal Act provides for the committal to an Industrial School of children under 14 found begging or destitute and of children living in immoral surroundings. It further provides for the punishment of cruelty to children, of causing and abetting the seduction or prostitution of girls under 16, and of accepting articles in pawn from a child.

The Bombay and Central Provinces Acts, which are practically identical, go further and provide for the punishment of persons found drunk in a public place when in charge of a child under 7, or giving intoxicating liquor or drugs to a child under 14, or inciting a child to gamble. They also empower police officers to confiscate tobacco in possession of children.

The Bombay Act has been extended throughout the province with satisfactory results and it will not now be necessary to send any children to prison except in very exceptional cases. The

number of children under 16 admitted into the jails of the Presidency during 1936 was 6 (males 5 and female 1). There are several certified schools established under the Bombay Act and there are a number of other institutions which co-operate with different juvenile courts. A Children's Aid Society is in existence which offers active co-operation. The Bombay Children Act has been amended mainly to prohibit the publication of names, addresses or other details of children or young persons involved in offences; to provide for a system of true probation as distinct from supervision; to empower the Chief Inspector of Certified Schools to release youthful offenders on licence and to raise the minimum term of detention in the Borstal School from 2 to 3 years.

These provisions of the Bombay Act which relate to youthful offenders, the maintenance and treatment of persons sent to certified schools or committed to the care of relatives or other fit persons and the establishment of industrial schools and juvenile courts were applied to the province of Sind in March, 1936.

The operation of the Bengal Act which was passed in 1922 is at present confined to the town, port and suburbs of Calcutta, Howrah and to certain portions of the District of the 24 Parganas. A Central Children Court has been established in Calcutta, which has jurisdiction over the whole area to which the Act has been extended.

The Governments of Madras, Punjab and the Central Provinces have also enacted Probation of Offenders Act which allow of the release of young offenders on parole under specially selected Probation Officers. Similar legislation is under contemplation in Bombay, U.P. and Assam.

The provisions of the Borstal Schools Act are practically the same in the provinces where such Acts have been enacted.

In provinces where there is no Borstal Schools Act juvenile offenders are sent to the reformatory schools established under the Reformatory Schools Act, or confined in juvenile or ordinary jails, but are not allowed to mix with adult prisoners. In the Punjab a Reclamation Department has been established the main function of which is the working of the Punjab Good Conduct Prisoners Probationary Release Act, 1926. Officers of the Department visit jails for the selection of prisoners on probation release. The probationers are usually sent to special farms.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair

was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The Laws of 1939

BY

RATANLAL RANCHHODDAS, *Advocate, Bombay High Court, Editor, "Bombay Law Reporter"*

AND

MANHAR R. VAKIL, *Barrister-at-Law, Assistant Editor, "Bombay Law Reporter."*

1. The Indian Tariff (Amendment) Act—This Act imposes for a temporary period extending to March 31, 1940, a duty at the rate of Re. 1-8 per cent. on wheat and wheat flour imported into India, with a view to assisting the sale in India of wheat produced in India.

2. The Ajmer-Merwara Municipalities Regulation (Amendment) Act—This Act amends s. 30 of the Ajmer-Merwara Municipalities Regulation, 1925, and lowers the existing educational qualification entitling a person to be enrolled as an elector.

3. The Destructive Insects and Pests Act, 1914, is made applicable to Berar by this Act.

4. The Motor Vehicles Act.—The conditions brought about by the rapid growth of motor transport in the past two decades showed the inadequacy of the Indian Motor Vehicles Act, 1914, to deal with these. In the interests of the safety and convenience of the public and of the development of a co-ordinated system of transport, much closer control was required than this Act permitted and it was found necessary to take powers to regulate transport. The present Act, which supersedes the Act of 1914, incorporates the main recommendations of the Motor Vehicles Insurance Committee and of the Wedgwood Committee and is the outcome of consultations with Provincial Governments and the third Transport Advisory Council which met in December 1937. The Act came into force on July 1, 1939.

Chapter I deals with definitions of the various terms used in the Act. Some of these are as follows:—"Contract carriage" means a motor vehicle which carries a passenger or passengers for hire under a contract for the use of the vehicle as a whole at an agreed rate from one point to another without stopping to pick up or set down along the line of route passengers not included in the contract and includes a motor cab; "Fares" includes sums payable for a season ticket or in respect of the hire of a contract carriage; "Goods" includes livestock, and anything carried by a vehicle except living persons, but does not include luggage or personal effects carried in a motor car or in a trailer attached to a motor car; "Locomotive" means a motor vehicle which is itself not constructed to carry any load, the unladen weight of which exceeds 16,000 pounds avoirdupois; "Motor cab" means any motor vehicle used to carry not more than six passengers excluding the driver, for hire; "Motor Vehicle" means any mechanically propelled vehicle adapted for use upon roads whether the power propulsion is

transmitted thereto from an external or internal source but does not include a vehicle running upon fixed rails or used solely upon the premises of the owner; "Stage carriage" means a motor vehicle carrying or adapted to carry more than six persons excluding the driver which carries passengers for hire at separate fares paid by individual passengers.

Chapter II deals with licensing of drivers of motor vehicles. Under s. 3 it is necessary to hold a driving license. S. 4 prescribes the age limit in connection with the driving of motor vehicles. A person under the age of eighteen years is not permitted to drive a motor vehicle in any public place. A person under the age of twenty also cannot drive a transport vehicle in any public place. S. 5 prohibits the owner or person in charge of a motor vehicle to permit any person who contravenes the above provisions, to drive the vehicle. S. 7 deals with the grant of a license by a licensing authority on an application made to it for the purpose. Where the application is for a license to drive as a paid employee or to drive a transport vehicle, it must be accompanied by a medical certificate signed by a registered medical practitioner. If the applicant is suffering from any specified disease or disability or other disease or disability which is likely to cause the driving by him of a motor vehicle to be a source of danger to the public or to the passengers, the licensing authority must refuse to issue the license. Under s. 9 a license issued under the Act is effective throughout British India and under s. 10 it is effective without renewal for a period of twelve months only from the date of issue or last renewal. The fee payable in respect of a license is five rupees and the fee for its renewal is three rupees. Under s. 12 the licensing authority is empowered to revoke a license if it has reasonable grounds to believe that the holder of the license is, owing to any disease or disability, unfit to drive a motor vehicle. S. 13 provides for appeals from orders refusing to issue or revoke or refusing to renew a license. S. 15 empowers a licensing authority to disqualify a person for a specified period for holding or obtaining a license under certain circumstances, e.g., if he is a habitual criminal or a habitual drunkard or if he is using or has used a motor vehicle in the commission of a cognisable offence. Under s. 17 the Court by which a person is convicted of an offence under the Act is empowered to disqualify for a specified period such a person from holding any license. The Court, however, cannot order the disqualification of an offender convicted for the first or second time for the offences of driving at

excessive speed. For certain offences, e.g., driving when under the influence of drink, the section makes it imperative upon the Court to disqualify the offender for a specified period. A person who has been disqualified may, under s. 18, apply to the Court, which has disqualified him, to remove the disqualification. An application under the section may be made at any time after the expiry of six months from the date of the order. Ss. 19 and 20 deal with endorsements on a license of particulars of any order of disqualification and of any conviction of an offence in respect of which an order of disqualification is made. A person whose license has been endorsed will be entitled, on payment of a fee of five rupees, to receive a new license. If during a continuous period of three years since the last endorsement was made, no further order of endorsement has been made against him. If the endorsement was only in respect of a speed limit, he will be entitled to a license issued on the expiration of the date of the order.

Chapter III deals with the registration of motor vehicles. Under ss. 22 and 23 it is necessary to register a motor vehicle by a registering authority in the province in which the owner of the motor vehicle has the residence or place of business where the vehicle is normally kept. A motor vehicle already registered, under any enactment in force in British India, at the commencement of the Act will be deemed to be registered under this Act until the 1st day of April 1941. S. 25 provides for the temporary registration of a motor vehicle. A registration so made will be valid only for a period of one month and will not be renewable. Under s. 28 a certificate of registration issued under the Act in respect of a motor vehicle will be effective throughout British India. Subject to certain specified requirements a motor vehicle registered by a competent authority in any Indian State or in the French or Portuguese Settlements bounded by India will not require to be registered in British India. S. 29 provides for the assignment of fresh registration mark in respect of a motor vehicle which has been registered in one province but has been kept in another province for a period exceeding twelve months. Under s. 31, within thirty days of the transfer of ownership of any motor vehicle registered under the Act, the transferee must report the transfer to the registering authority where he resides and forward to that authority the certificate of registration with the prescribed fee. S. 32 requires the owner of a motor vehicle to report any alterations made in it, to the registering authority within fourteen days of the making of such alteration. It will not however be necessary to report any change in the unladen weight of the motor vehicle consequent on the addition or removal of fittings or accessories, if such change does not exceed two per cent. of the weight entered in the certificate of registration. S. 33 authorises a registering authority which has reason to believe that any motor vehicle within its jurisdiction is in such a condition that its use in a public place would constitute a danger to the public, may suspend the certificate of registration of the vehicle until the defects are remedied to its satisfaction. In the case of a suspension which has continued without interruption for a period of not less

than six months the original registering authority may cancel the registration. S. 34 requires the owner of a motor vehicle which has been destroyed or has been rendered permanently incapable of use to report the fact to the registering authority within fourteen days. The original registering authority will thereupon cancel the registration and the certificate of registration. Any registering authority may cancel the registration of a motor vehicle if it is in such a condition that its use in a public place would constitute a danger to the public and it is beyond reasonable repair. The registering authority must cancel the registration of a motor vehicle which has been permanently removed out of British India. Ss. 36-38 deal with special requirements for registration of transport vehicles.

Chapter IV deals with the control of transport. S. 41 deals with the formation and of a Provincial Transport Authority Transport Authorities. A person who has any financial interest, whether as proprietor, employee or otherwise in any transport undertaking, cannot be appointed as, or continue as a member of, any such transport authority. S. 42 requires the owner of a transport vehicle to use it in accordance with the conditions of a permit granted or countersigned by a Regional or Provincial Transport Authority. S. 43 empowers a Provincial Government by notification to control road transport by prohibiting or restricting throughout the province or in any area or on any route within the province the conveying of long distance goods traffic generally or of prescribed classes of goods by private or public carriers; or fix maximum or minimum fares or freights for stage carriages and public carriers. Provision is made for the cancellation or variation of any such notification by the Provincial Government on certain specified grounds, e.g., that the railways are not giving reasonable facilities or that the special needs of a particular industry or locality require to be considered afresh. S. 47 prescribes the procedure to be followed by a Regional Transport Authority in considering an application for a stage carriage permit, and s. 48 empowers such an authority to restrict the number of stage carriages and impose conditions on stage carriage permits. Ss. 49-51 deal with contract carriage permits and the procedure of the Regional Transport Authority in considering applications for contract carriage permits and the power of such authority to restrict the number of contract carriages and impose conditions on contract carriage permits. Ss. 53-56 deal with private and public carriers' permits, the procedure of the Regional Transport Authority in considering applications for such permits and the power of such authority to restrict the number of and attach conditions to public carriers' permits. S. 57 provides for the procedure in applying for and granting the permits referred to in this chapter. Under s. 58 a permit, other than a temporary permit, will be effective without renewal for such period, being not less than three years and not more than five years, as the Regional Transport Authority may specify in the permit. S. 59 specifies the general conditions attaching to all permits, e.g., that a permit will not be transferable from one person

to another except with the permission of the transport authority which granted the permit; that the vehicle to which the permit relates is not driven at a speed exceeding the speed lawful under the Act and that the provisions of the Act limiting the hours of work of drivers are observed in connections with the vehicle to which the permit relates. S. 60 empowers a transport authority to cancel or suspend a permit granted by it under certain specified circumstances, *e.g.*, on the breach of any condition specified in s. 59, if the holder of the permit ceases to possess the vehicle covered by the permit or if the holder of the permit has obtained it by fraud or misrepresentation. Under s. 61 where the holder of a permit dies, the person succeeding to the possession of the vehicle covered by the permit may, for a period of three months, use the permit as if it had been granted to himself provided such person has informed the transport authority of the death of the holder within thirty days of its occurrence. The transport authority may, on application made to it within three months of the death of the holder of the permit, transfer the permit to such person. S. 62 empowers a Regional Transport Authority to grant permits, to be effective for a limited period not in any case to exceed four months, to authorise the use of a transport vehicle temporarily for the conveyance of passengers on special occasions such as to and from fairs and religious gatherings or for the purposes of a seasonal business or to meet a particular temporary need. Under s. 63 a permit granted by the regional transport authority of any one region or province will not be valid in any other region or province unless the permit has been countersigned by the Regional Transport Authority of that other region or province. S. 65 restricts the hours of work of drivers of transport vehicles. Such persons must not be allowed to work for more than five hours before they have had an interval of rest of at least half an hour or for more than nine hours in one day, or for more than fifty-four hours in the week. Under s. 66 any contract for the conveyance of a passenger in a stage carriage or contract carriage in so far as it purports to negative or restrict the liability of any person in respect of any claim made against him in respect of the death of, or bodily injury to, the passenger while being carried in, entering or alighting from the vehicle, will be void.

Chapter V deals with construction, equipment and maintenance of motor vehicles. Under s. 69 every motor vehicle must be so constructed and so maintained as to be at all times under the effective control of the person driving it. S. 70 authorises the Provincial Government to make rules regulating the construction, equipment and maintenance of motor vehicles and trailers.

Chapter VI deals with the control of traffic. S. 71 prohibits a person from driving a motor vehicle at a speed exceeding the maximum speed fixed for the vehicle under the Act. S. 72 prohibits the driving in any public place of any motor vehicle which is not fitted with pneumatic tyres and empowers the Provincial Government to prohibit or restrict the use of heavy transport vehicles in any area or route within the province. Ss. 73-77 empower the Provincial Government to have a goods vehicle or trailer weighed which

contravenes the provisions of the Act relating to limitation of weight; to erect traffic signs; to restrict or prohibit the use of vehicles in the interests of public safety or convenience; to determine parking places and halting stations and to designate certain roads as main roads. S. 78 imposes a duty on drivers of motor vehicles to obey traffic signs and to comply with the directions given him by a police officer engaged in the regulation of traffic in any public place. Under s. 79 a driver is directed to make certain specified signals on specified occasions. Vehicles with left hand steering are required under s. 80 to be equipped with mechanical or electrical signalling devices of a prescribed nature. S. 81 prohibits the leaving of a motor vehicle in such a way as to cause danger, obstruction or undue inconvenience to other users of the road. Riding on the running board of a motor vehicle is prohibited under s. 82. Under s. 83 no person driving a motor vehicle must allow any person to stand or sit on anything to be placed in such a manner as to hamper him in his control of the vehicle and under s. 84 a motor vehicle must not be allowed to remain stationary unless the mechanism has been stopped and such measures are taken that the vehicle cannot accidentally be put in motion or there is on the driver's seat a person licensed to drive the vehicle. S. 85 prohibits pillion riding on two-wheeled motor cycles. S. 86 imposes the duty on the driver of a motor vehicle to produce on demand by a police officer in uniform his license for examination and empowers a re-registering authority to demand for inspection the certificate of registration of a vehicle. It will be a sufficient compliance with this section if the license or certificate is produced within ten days of the demand at any police station in British India. This latter provision however does not apply to a driver driving as a paid employee or to the driver of a transport vehicle. Under s. 87 the driver of a motor vehicle must stop the vehicle when required to do so by any police officer in uniform or when required to do so by any person in charge of an animal (horse, cattle, elephant, camel, ass, mule, sheep or goat) if such person apprehends that the animal is being alarmed by the vehicle or when the vehicle is involved in an accident whether the driving of the vehicle was or was not the cause of the accident. The driver must give his name and address and the name and address of the owner of the vehicle to any person affected by any such accident and who demands it provided such person also furnishes his name and address. Under s. 88 the owner of a motor vehicle the driver of which is accused of any offence under the Act must give, on demand made by any police officer, all information regarding the name and address of and the license held by the driver. Under s. 89 when any person is injured as a result of an accident in which a motor vehicle is involved, the driver of such vehicle must take all reasonable steps to secure medical attention for the injured person and if necessary convey him to the nearest hospital, unless the injured person desires otherwise and if no police officer is present, report the circumstances of the occurrence at the nearest police station as soon as possible and in any case within twenty-four hours of the occurrence. S. 90 authorises the removal of a vehicle, which is involved in an accident, for examination. The place to which the vehicle

is removed must be intimated to the owner and it must be returned without unnecessary delay.

Chapter VII deals with the power of the Central Government to make rules regarding motor vehicles temporarily leaving or visiting British India. Under s. 92 rules may be made for the grant of travelling passes or certificates to persons temporarily taking motor vehicles out of British India to any place outside India or to persons temporarily proceeding out of British India and desiring to drive a motor vehicle during their absence from British India. Rules may also be made prescribing the conditions subject to which motor vehicles temporarily brought into British India from outside India may be possessed and used in British India and also rules prescribing the conditions subject to which persons entering British India for a temporary stay may drive motor vehicles in British India.

Chapter VIII which deals with insurance of motor vehicles against third party risks comes into operation on July 1, 1943. S. 93 defines "authorised insurer" as an insurer in whose case the requirements of the Insurance Act, 1938, with respect to the registration of and deposits by insurers are complied with and "certificate of insurance" means a certificate issued by an authorised insurer. Under s. 94 a person must not use, except as a passenger, or allow any person to use a motor vehicle in a public place, unless there is in force in relation to the use of the vehicle by that person or that other person a policy of insurance complying with the requirements of this chapter. Under s. 95 a policy of insurance must be issued by an authorised insurer and, insure the person specified in the policy to the extent specified against any liability incurred by him in respect of the death of or bodily injury to any person caused by the use of the vehicle in a public place. A policy will not be required to cover liability in respect of the death arising out of, or bodily injury sustained in the course of, his employment, by the employee of a person insured by the policy or except where the vehicle is a vehicle in which passengers are carried for hire or by reason of a contract of employment, to cover liability in respect of the death of or bodily injury to persons carried in the vehicle at the time of the occurrence of the event out of which a claim arises, or to cover any contractual liability. A policy of insurance must cover any liability incurred in respect of any one accident up to the following limits, namely, where the vehicle is a vehicle used for the carriage of goods, a limit of Rs. 20,000; where the vehicle is a vehicle in which passengers are carried for hire or in pursuance of a contract of employment, in respect of persons other than passengers carried for hire, a limit of Rs. 20,000; and in respect of passengers a limit of Rs. 20,000 in all and Rs. 4,000 in respect of an individual passenger, if the vehicle is registered to carry not more than six passengers or Rs. 2,000 in respect of an individual passenger, if the vehicle is registered to carry more than six passengers; where the vehicle is of any other class, the amount of the liability incurred. S. 96 requires the insurer to satisfy judgments against persons insured in respect of third party risks. No sum will, however, be payable by an insurer in

respect of any judgment unless before or after the commencement of the proceedings in which the judgment is given, the insurer had notice through the Court of the bringing of the proceedings. An insurer to whom such notice is given will be entitled to defend the action on certain specified grounds, e.g., that there was a breach of a condition of the policy or that the policy was void on the ground that it was obtained by the non-disclosure of a material fact. Under s. 97 on the insolvency of a person insured against liabilities which he may incur to third parties, his rights against the insurer under the contract will be transferred to the third party to whom the liability was incurred. Under s. 98 a person against whom a claim is made in respect of any liability must on demand by the person making the claim state whether or not he was insured in respect of that liability. So also must an insolvent debtor give, at the request of any person claiming that the insolvent debtor is under a liability to him, such information as may reasonably be required by him for the purpose of ascertaining whether any rights have been transferred to him or for the purpose of enforcing such rights. Under s. 99 a settlement made by an insurer with the insured in respect of any claim made by a third party cannot be valid unless such third party is a party to the settlement. S. 101 provides that the insolvency of the insured person does not affect any liability of that person or claims by third parties against the insurer. Under s. 102 the death of a person in whose favour a certificate of insurance has been issued, if it occurs after the happening of an event which has given rise to a claim, will not be a bar to the survival of any cause of action arising out of the event against his estate or against the insurer. S. 104 makes it obligatory on the insured person to surrender the certificate of insurance to the insurer within seven days of the termination or suspension of the period of cover under the policy. Failure to so surrender the policy is made punishable with fine up to Rs. 15 for every day that the offence continues subject to a maximum of Rs. 500. S. 105 requires the insurer to notify the registering authority of the cancellation or suspension of the policy. Under s. 106 a person driving a motor vehicle in any public place must produce the certificate of insurance relating to the use of the vehicle when so required by a police officer in uniform. Under s. 108 a Provincial Government may allow, under certain circumstances and subject to specified conditions, a co-operative society of public service vehicle owners to transact the business of an insurer for the purposes of this chapter. Under s. 109 a registering authority or the officer in charge of a police station, must, if so required by a person who alleges that he is entitled to claim compensation in respect of an accident arising out of the use of a motor vehicle or if so required by an insurer against whom a claim has been made, furnish to such person or such insurer on payment of a prescribed fee any information at the disposal of such authority or police officer relating to the vehicle and the name and address of the person using the vehicle at the time of the accident.

Chapter IX deals with offences, penalties and procedure. Under s. 112 where no penalty is provided for an offence under the Act this

section generally provides for punishment of the offence with fine up to Rs. 20 and for a second offence under the Act with fine up to Rs. 100. S. 115 imposes a fine up to Rs. 100 for the offence of driving at excessive speed. A person must not be convicted under this section solely on the evidence of one witness unless such witness's opinion is shown to be based on an estimate obtained by the use of some mechanical timing device. The penalty prescribed for driving recklessly or dangerously, under s. 116, is on a first conviction for the offence imprisonment up to six months or fine up to Rs. 500 and for a subsequent offence if committed within three years of the commission of a previous similar offence imprisonment up to two years or with fine up to Rs. 1,000. Under s. 117 the penalty for driving while under the influence of drink or drugs, is, for a first offence imprisonment up to three months or fine up to Rs. 500. Driving when mentally or physically unfit to drive is made punishable with a fine up to Rs. 200 under s. 118. Under s. 120 unauthorised racing and trials of speed between motor vehicles in a public place is made punishable with imprisonment up to one month or fine up to Rs. 300. Using a vehicle which is in an unsafe condition is an offence made punishable under s. 121. Under s. 123 the offence of using a vehicle without permit is made punishable with a fine up to Rs. 500. Under s. 125 driving an uninsured vehicle is an offence punishable with imprisonment up to three months or with fine up to Rs. 500. S. 126 provides for the punishment of the offence of taking and driving away any motor vehicle without the authority of the owner. Under s. 127 a person who, without lawful authority, enters or mounts any stationary vehicle or tampers with the brake or any part of the mechanism of a motor vehicle, can be punished with fine up to Rs. 100. S. 128 empowers a police officer in uniform to arrest without warrant any person who commits in his view an offence punishable under s. 116 or s. 117 or s. 126. A person arrested under s. 117 must be subjected to medical examination within two hours of his arrest or must then be released from custody. A police officer is also empowered to arrest without warrant any person who refuses to give his name and address as required under the Act or if the police officer has reason to believe that any person concerned in an offence under the Act will abscond or avoid the service of a summons. Under s. 130 in the case of certain specified offences a Court may state upon the summons to be served on the accused that he may by a specified date prior to the hearing of the charge plead guilty to the charge by registered letter and remit to the Court a sum not exceeding Rs. 25 as the Court may specify. Under s. 132 a Court inferior to that of a Presidency Magistrate or a Magistrate of the second class cannot try any offence punishable under the Act.

Under s. 133 rules made under the Act by the Central Government or any Provincial Government must be laid for not less than fourteen days before the Central or Provincial Legislature and must be subject to modifications made by the Legislature. S. 134 repeals the Indian Motor Vehicles Act, 1914.

Eleven Schedules are annexed to the Act. The First Schedule contains Forms, e.g., form of

application for license to drive a motor vehicle; driving license; form of certificate of registration. The Second Schedule specifies the diseases and disabilities disqualifying a person from obtaining a license to drive a motor vehicle. The Third Schedule is concerned with the test of competence to drive. The Fourth Schedule names the authorities entitled to grant licenses to drive, etc. The Fifth Schedule enumerates the offences on conviction of which an endorsement must be made on the license of the person affected. The Sixth Schedule deals with the registration mark for a vehicle in the different provinces. The Seventh Schedule tabulates the maximum axle weights permissible for transport vehicles. The Eighth Schedule specifies limits of speed for motor vehicles. The Ninth Schedule deals with the various traffic signs and the Tenth Schedule with driving regulations. The last Schedule deals with signals to be made by the drivers when driving a motor vehicle.

5. The Indian Cotton Cess (Amendment) Act.—The present Act amends the original Act in such a manner as to cause the references therein to British India to embrace Berar. By another amendment the cotton growing industry in India is now entitled to nominate two representatives to the Indian Central Cotton Committee.

6. Indian Merchant Shipping (Amendment) Act.—S. 62 of the original Act provides *inter alia* that an assignment of his wages, before they accrue, made by a seaman, will not be binding upon him. The result of this provision is that assignments of a seaman's wages to a Pension or Provident Fund will not be in accordance with law and the Central Government cannot accord the requisite sanction to the inclusion of a clause in the Articles of Agreement of a seaman to provide for the necessary deduction to be made from his wages. The present Act remedies this by legalising the payment of contributions by seamen out of their wages to any fund approved by the Central Government, the main purpose of which is the provision of benefits for seamen on retirement.

7. The Indian Income-Tax (Amendment) Act.—This Act gives effect to such recommendations of the Income-tax Enquiry Report, 1936, as have been accepted and makes such amendments to the original Act as experience of the working had indicated to be necessary or desirable. In addition to a few new provisions the present Act has made many far-reaching and important amendments to the parent Act. The following are some of its salient provisions.

The Act consists of two parts. Part I takes effect from April 1, 1939, and Part II, which brings into existence the Appellate Tribunal, will take effect at a date not later than two years from the aforesaid date.

One of the methods adopted so far to avoid super-tax payable by shareholders was to distribute profits in the form of bonus shares, bonus debentures, etc., which according to law was not income in the hands of the shareholders and hence not liable to tax. The present Act gives a new definition of "dividend" and includes thereunder the distribution by a company of capitalised profits if such distribution entails the release by the company to its

shareholders of any assets of the company and debenture-issues out of the accumulated income. The definition covers the case where a company goes into liquidation and distributes the accumulated profits which arose during the six previous years preceding the date of liquidation and also includes any distribution by a company on the reduction of its capital to the extent to which the company possessed accumulated profits which arose after the end of the previous year ending next before April 1, 1933. Income in the Act includes any dividend as defined here (s. 2). S. 4 of the present Act enlarges the application of the Act. The total income of any previous year of any person resident and domiciled in British India now includes in addition to his income accruing in British India the whole of the foreign income brought into British India from April 1, 1933, and each year's foreign income accruing from April 1, 1933. Persons who are resident but not domiciled in British India have to pay tax, in addition to the tax on all income accruing in British India, on foreign income brought into or received in British India and on all income accruing out of a business controlled in or a profession or vocation set up in India (including Indian States) whether brought into British India or not. Income chargeable under head "Salaries" if payable in British India and not being pension payable outside India, will be liable to tax wherever paid, if it is earned in British India. A dividend paid outside British India is deemed income accruing in British India to the extent to which it has been paid out of profits subjected to income-tax in British India. S. 5 adds two new sections to the Act which define "residence in British India" and "not ordinarily resident". An amendment has been made in s. 8, so that sums due as salaries are liable to be assessed when they are due irrespective of whether paid or not. Advances and loans of some income are deemed to be salary due on the date when received. Section 9 has undergone alteration. The exemption given to property occupied for business purposes is restricted to property occupied for business which is assessable. Before the amendment interest on capital charge on property was allowed even though the capital was borrowed for private purposes, hereafter interest will only be allowed if it was on a charge to which the property was subject at the time of acquisition by the assessee. There is an important amendment in the provision about depreciation (s. 10). Depreciation is allowed to be carried on in accounts from year to year, but if it is written off, it will be allowed exemption only for such amount as is actually written off. Dividends received from companies as income-tax free were wholly exempted from income-tax even in those cases where part of the company's profits were taxed; but hereafter they will be on the same footing as interest on securities and credit for the appropriate amount of tax on it will be given in the assessment. Section 15 is amended so that exemption for life insurance premia, payments to provident funds and to family pension funds are limited only to one-sixth of the total income. The amended s. 17 provides that husband and wife are to be assessed separately at the rate applicable to the total income of both; but if the wife earns anything by personal exertion she is exempted for the first Rs. 500. As regards

the returns of income the law is changed. The Income-tax officer need not send the forms to assesses. The duty of submitting the returns is made compulsory on assesses. Under s. 23A power is given to Income-tax authorities to assess individual members of certain companies. The power to carry forward losses is now hedged in with notable restrictions. A partner in an unregistered firm cannot set off any part of the firm's loss to his individual income. The partners in a registered firm are entitled to such set off, if the loss cannot be set off in the firm's assessment. Such loss can be carried forward and set off only against the profits of "the same business, profession, or vocation" and only for a period of six years (s. 24). Section 25A directs that the assessment on the profits of the previous year should be made on the person who received the profits, or the disrupted Hindu undivided family. Under s. 26, where a firm has changed its constitution or where there has been a succession to a business, profession or vocation the persons who are entitled to receive the profits are to be assessed on them. When a person evades payment of tax he can be required not only to pay the tax but also a penalty of one and one-half times the assessment of the tax avoided. The law as regards incomes escaping assessment (s. 34) has undergone changes. The period for making such assessments is enlarged from one year to six years; a time limit has been put on the duration of assessment proceedings. These must be completed in six years at the maximum. Section 40 enables the assessment on a non-resident direct, instead of through his resident agent. The cordon placed round income of non-residents in British India has been tightened by taking in "income from any asset or source of income in British India or through or from any money lent at interest and brought into British India in cash or in kind".

A new chapter called chapter VA has been added, to check the avoiding of payment of income tax. Where income arises, the assets from which it arises is transferred to a company which is resident outside British India, and then the payments are received from such company in a form and in such circumstances that the amounts received from the company are never in fact repayable or repaid to it. The reason is that the real owner of the assets receives the income therefrom indirectly and in a capital form. These escape tax. The provision newly made is that wherever income which really belongs to a person liable to income-tax and super-tax becomes by means of an artificial set of transactions, the income of somebody liable to pay less tax or no tax at all, such income can for tax purposes be treated as the income of the person to whom it really belongs. The section about refunds (s. 48) is much simplified, and it is made clear that a person who has paid any sum in excess as taxes is entitled to the refund of such excess. As regards double income-tax (s. 49), the relief is now restricted to half the Indian rate. The relief granted to a company is taken into account in computing the refund admissible to the shareholder, and any excess relief granted to the company over the relief admissible to the shareholder is recoverable from him. The period for claiming refunds is extended from one year to six years. Section 66 as amended

enables a High Court in cases of appeal to the Privy Council, where a refund of the tax to the assessee who has succeeded before the High Court is inadvisable, to authorise the Commissioner to withhold the refund. In case of his success in the Privy Council the assessee is entitled to get the refund with interest.

8. The Dissolution of Muslim Marriages Act.—The Mahomedian law of marriage as administered in British India was one-sided and unjust, inasmuch as the husband can undo a marriage by pronouncing three times the magic word "talak," but the wife, howsoever great her wrongs may be, had no remedy. Now, this Act enables (s. 2) a married woman to obtain a decree for dissolution of marriage when (1) the whereabouts of the husband are not known for four years; or (2) the husband has failed to maintain his wife for two years; or (3) the husband has been sentenced to imprisonment for seven years or more; or (4) the husband has not performed his marital obligations for three years; or (5) the husband was impotent at the time of marriage; or (6) the husband is suffering from insanity or leprosy for two years; or (7) the wife has repudiated her marriage performed before she was fifteen, when she attained the age of eighteen years or (8) the husband treats her with cruelty. There is another important provision. Section 4 provides that the renunciation of Islam by a married woman or her conversion to another faith does not by itself operate to dissolve her marriage.

9. The Standards of Weights Act.—The standardisation of weights and measures throughout the length and breadth of British India has been a long-standing necessity. This Act fixes the weight of a tola at 180 standard grains, of a seer at 80 tolas, and a maund at 40 standard seers.

10. The Indian Merchant Shipping (Second Amendment) Act.—The object of this Act is to prevent over-crowding of pilgrims on ships bound for Mecca. Every passenger so carried is entitled to a space of 16 square feet. Hitherto a child under one year was not counted at all; and children between one year and twelve years were counted as half passengers. Under this Act, every person, whatever the age, is counted as one person and entitled to a sixteen square feet space.

11. The Insurance (Amendment) Act.—The Insurance Act of 1938 was enacted early in the year 1938, and before it came into operation a considerable number of technical defects was discovered. Those are sought to be remedied by this Act. It is also made clear that insurers who set up organisations outside British India and operate through agents in British India are within the scope of the Act (ss. 2A, 2B). The provisions of the Act are liberalised with a view to promote insurance in Indian States (ss. 27, 28). Section 31 has been enlarged in order to enable companies to keep their assets in the name of the official trustee as an additional protection to their policy-holders. Section 50 now clarifies what "lapse of a policy" means.

12. The Indian Patents and Designs Act.—The amendments made in the principal Act mainly refer to matters of procedure.

13. The Workmen's Compensation (Amendment) Act.—The High Courts in India

have differed from each other in their interpretation of the expression "employed on monthly wages." Section 5 of the Act has been amended to make it clear that the expression "monthly wages" means "the amount of wages deemed to be payable for a month's service (whether the wages are payable by the month or by whatever other period or at piece rates), and calculated." It is also made clear that a workman who has suffered by a contrary interpretation can apply for over compensation within six months of the passing of the Act, irrespective of the bar of limitation.

14. The Cotton Ginning and Pressing Factories (Amendment) Act.—Section 9 has been amended to make it clear that in the case of factories completed or commenced before the Act came into force, if any alterations are made such alterations should conform to the requirements of the Act. Section 14 now enacts that any bale of cotton marked in accordance with s. 4 shall be presumed, as between the purchaser and seller, to have been so marked before leaving the factory in which it was pressed.

The Indian Finance Act.—(Owing to differences of opinion between the Central Legislature and the Central Government as regards the reduction in certain rates, the Legislature threw out the bill and the Governor-General under the power reserved to him by s. 67 B (1) (b) of the Government of India Act 1935, certified the Act which became law. The Act maintains the rates of postage, income-tax and super-tax as they existed on April 1, 1938.

15. The Employment of Children (Amendment) Act.—Employment of children in manual labour at a proper age is the object of this enactment. Section 3 prohibits employment of children below 15 years in any occupation connected with the transport of passengers, goods or mails by railways, and also employment of children below 14 years in the handling of goods within the limits of any port. The penalty imposed for the breach of the rule is a fine of Rs. 500 (s. 4).

16. The Registration of Foreigners Act.—The Act was promulgated on April 8, 1939, as a pre-war measure. It provides for registration of all foreigners present in or departing from British India. It empowers the Central Government to make rules (1) for requiring any foreigner to report his presence to the prescribed authority, (2) for similarly reporting by a foreigner who moves from one place to another in British India, (3) for requiring a foreigner, who is about to leave British India, to report the date of his intended departure, (4) for requiring a foreigner to give proof of his identity, and (5) for requiring a keeper of hotel, boarding-house, etc., or the person in charge of a vessel or aircraft to report the presence of any foreigner residing with him (s. 5). Section 5 provides a penalty for breach of the rules at Rs. 1000. This Act is supplemental to the Foreigners Act of 1864.

17. The Indian Succession (Amendment) Act.—Amongst Parsis the intestate succession was governed by the Parsi Intestate Succession Act (XXI of 1865). That Act was repealed and incorporated in the Indian Succession Act of 1925. It was felt by the Parsi Community that the law as contained in ss. 50 to 56 required

testament and also stood in need of being modernised in view of the progress of the community. Section 51 makes it clear that where a male Parsi dies intestate the shares taken by his widow and sons shall be double of the shares taken by the daughters. Where a Parsi female dies intestate, her property is taken by the widower and children in equal shares (s. 52). Section 53 makes provision for division of share of pre-deceased child of intestate having lineal descendants. Where a Parsi dies leaving a widow or widower but no lineal descendant, she or he takes only a half share in the estate (s. 54). Where a Parsi dies without leaving a widow or widower or any lineal descendant the property is taken by near relatives enumerated in Schedule II, each male taking double the share of each female standing in the same degree of relationship.

18. The Indian Tariff (Second Amendment) Act.

This Act levies a protective tariff of 25 per cent. *ad valorem* on wood pulp, paper for writing or printing, paste board, and old newspapers.

19. The Coal Mines Safety (Stowage) Act.

A board for administration of funds raised under the Act is constituted under the name of the Coal Mines Stowing Board (s. 3). Section 5 levies an excise duty on coal or soft coke at the maximum rate of three annas per ton, and this levy would be counterbalanced by an equal levy of custom duty on imported coal or soft coke (s. 6). The fund so collected is to be devoted to meet expenses and to grant of stowing materials to owners, agents or managers of coal mines (s. 8).

20. The Sugar Industry (Protection) Act.

Pending a further inquiry into the sugar industry in the year 1940, the protective import duty on sugar is retained at the reduced figure of Rs. 6-12-0 per cent. in place of Rs. 7-4-0 per cent.

21. The Chittagong Port (Amendment) Act.

A slight amendment is made in the existing Chittagong Port Act, whereby the right of repaying loans to the creditor Government without its consent at any time before the time fixed for repayment is confined only to loans contracted before January 1, 1939. The Act can no longer be exercised with reference to loans contracted after the above date.

22. The Criminal Law (Amendment) Act.

Section 176 of the Indian Penal Code penalises omission to give notice or information to a public servant by person legally bound to give it and makes it punishable by simple imprisonment extending to six months or a fine which may extend to Rs. 1,000. To this section a new clause has been added, which punishes omission to give "the notice or information required by an order passed under s. 565 (1) of the Criminal Procedure Code, dealing with previously convicted offenders" by a sentence of imprisonment, rigorous or simple which may extend to six months or by a fine extending to Rs. 1,000 (s. 2).

23. The Indian Soft Coke Cess Committee Act.

The constitution of the Soft Coke Cess Committee is remodelled in view of the separation of "Orissa" as a new province and owing to coming into existence of the Indian Owners' Association, the members of which

possess a substantial interest in the soft coke industry. The new Committee is to consist of four members, three of whom are to be nominated by the Association.

The Indian Tariff (Third Amendment) Act.

Under this Act import duties are levied on a new scale. Salted or dry fish pay a duty of 15 per cent. *ad valorem*. Cardamoms, lesser cinnamon cloves, nutmegs, and pepper bear a preferential revenue of 45 per cent. *ad valorem*. Portland Cement pays revenue duty at the rate of Rs. 13-12-0 per ton. Soda Ash is assessed to duty at 25 per cent. An *ad valorem* duty of 25 per cent. is imposed on certain chemicals, viz., cadmium sulphide, cobalt oxide, liquid gold for glass-making, selenium, and uranium oxide. Unexposed cinematograph films pay a revenue impost of 25 per cent. Cotton piece-goods if of British manufacture bear a duty of 15 per cent., and if not of British manufacture, a duty of 50 per cent. Sewing and knitting machines are saddled with a duty of 30 per cent. Carriages and carts pay a duty of 25 per cent.; and cycles, 30 per cent. Even artificial teeth have to bear a preferential revenue of 25 per cent. *ad valorem*.

The Indian Naval Reserve Forces (Discipline) Act.

This was another Act promulgated during 1939 by the Governor-General under the powers reserved to him by s. 67B of the Government of India Act, 1935. It is meant to provide for the discipline of members of the Indian Naval Reserve Forces raised in British India. Section 2 gives power to the Central Government to make rules for the government, discipline, and regulation of the Indian Naval Reserve Forces. If any member fails to attend when required or called, he can be fined in a sum of Rs. 200 (s. 5). A certificate signed by an officer stating that member has failed to attend when called is evidence by itself (s. 6).

24. The Indian Census Act.

The next Census in British India is due in 1941; and this Act provides for the machinery to carry out the census. It is shaped on the model of earlier Census Acts which were passed at the end of each decade. Section 3 creates the offices of census officers, assistant census officers, and census enumerators. The next section empowers the census officers to appoint certain persons to assist them in census work; and s. 5 enforces this power; on (a) owners or occupiers of land, tenure-holders, farmers, &c. and (b) all members of district, municipal, and other local authorities and their employees to give such assistance as may be needed. Census officers are invested with the power to ask questions "of all persons", who become "legally bound to answer them" (s. 6); but there is a significant proviso that no wife or husband can be compelled to state the name of her or his spouse. All occupiers of houses, vessels, or other places are bound to allow census officers to affix letters, numbers or marks on their premises (s. 7); and they are under a duty of filling in forms given to them by census officers (s. 8).

25. The Indian Salt (Amendment) Act.

made by this Act refer to the Commission of the Salt Revenue into two offices.

- 26. The Code of Civil Procedure (Amendment) Act.**—Doubts having been expressed as to the power of the High Commissioner for India to deduct the amount attached by a Court in India from the salary payable in England to an officer of the Indian Services, Order XXI, r. 48 of the Civil Procedure Code, has been amended, so as to make it clear that the Commissioner has the power to make such deductions.
- 27. The Indian Tea Cess (Amendment) Act.**—Power has been given to the Farat Indian Planters' Association to nominate one member to the Tea Cess Committee of India.
- 28. The Medical Diplomas Act.**—This Act lays down conditions, on the lines of s. 120 (3) of the Government of India Act 1935, against excluding from practice British subjects domiciled in the United Kingdom or India who hold medical diplomas granted in the United Kingdom on the ground of inadequacy of such diplomas (s. 3), Section 4.
- 29. The Indian Land Revenue (Amendment) Act.**—The provisions of the Collection of Taxes Act, 1931, are made applicable to the Indian Tariff (Second Amendment) Act as regards duties imposed on import of wood pulp, etc.
- 30. The Commercial Documents Evidence Act.**—Certain documents have been listed in two schedules. In List I are included certificates issued by public bodies. With reference to these documents the Courts are bound to presume them to be genuine and their contents correct. The other list enumerates certain reports, registers and receipts about which the Courts may presume likewise (s. 3).
- 31. The Indian Carriage by Air (Amendment) Act.**—This is a formal amendment in the Indian Carriage by Air Act of 1934. In the Schedule to that Act, the French word "preposes" was translated as "agents"; a better translation of the term, however, is "servants or agents". The latter is now adopted in the Schedule.
- 32. The Indian Rubber Control (Amendment) Act.**—The object of this Act is to carry out the agreement entered into between the British Government, France, Netherlands and Siam as to the regulation of production and export of rubber throughout their territories. Section 27 is modelled anew to make it clear that new planting is now permitted on a considerably larger scale and for the present replanting is unrestricted.
- 33. The Indian Railways (Amendment) Act.**—In the Indian Railways Act of 1890 a new section 42B has been added. The section empowers the Federal Railway Authority to make general or special orders for fixing maximum and minimum rates for the whole or any part of a railway, other than a minor railway, and prescribing the conditions in which such rates will apply.
- 34. The Repealing and Amending Act.**—Portions in the existing Acts which have become redundant are removed, and those which require a formal change are amended.
- 35. The Defence of India Act.**—This is purely a war measure. It is drawn up on the lines of the Defence of India (Criminal Law, Inquiries (Emergency Provisions) Act, 1939, (Amendment Act of 1915, but made suitable to the present times. It replaces the Defence of India Ordinance of 1939. Section 2 empowers the Central Government to make rules on a
- variety of topics far too numerous to mention. Section 4 vests special powers in the Central Government to control civilian personnel employed in connection with His Majesty's forces. If any person contravenes any of the rules made under s. 2 with intent to wage war against His Majesty or assists any State at war with His Majesty, the offender can be punished with death, or transportation for life, or with imprisonment for 10 years and shall also be liable to fine (s. 5). Chapter III deals with the creation and powers of special tribunals for trying offences punished by the Act.
- 36. The Indian Air Force Volunteer Reserve (Discipline) Act.**—The Government have created the Indian Air Force Volunteer Reserve in order to man auxiliary Air Force units. These units will, on formation, be governed by the Indian Air Force Act 1932. The present legislation provides that members of the Indian Air Force Volunteer Reserve will be governed by the main Act when under training or called into actual service and imposes on members of the Indian Air Force Volunteer Reserve penalties for failing to join a unit or attend at any place when required so to do for undergoing training or entering actual service. It replaces the Indian Air Force Volunteer Reserve (Discipline) Ordinance of 1939. Failure to attend for purposes of training is punishable with a fine of Rs. 200; but failure to join when called into actual service can be visited with imprisonment for two years (s. 4).
- 37. The Indian Aircraft (Amendment) Act.**—The purpose of this amending Act is to empower the Central Government to require installation and maintenance of lights on private property in the neighbourhood of aerodromes or in the vicinity of air-ports, by the owners or occupiers of property on payment of expenses. It gives to Government the right of access to such property.
- 38. The Panth Piploda Courts (Amendment) Act.**—If the Central Government so desire they can appoint an Additional Judge to the Court of the Chief Commissioner.
- 39. The Indian Oaths (Amendment) Act.**—Under the law as amended the Court can dispense with the oath or affirmation to a child witness under 12 years of age, if such child understands the duty of speaking the truth but does not understand the nature of an oath or affirmation.
- 40. The Indian Motor Vehicles (Amendment) Act.**—The amendments made here are mostly departmental. Time is given to Provincial Governments to set up Transport Authorities till the time the rules made under the new Act are duly promulgated. Other minor amendments made do not call for notice.
- 41. The Insurance (Second Amendment) Act.**—This minor amendment supplies reference to the earlier Indian Companies Acts of 1866 and 1882 along with the present Companies Act of 1913.
- 42. Workmen's Compensation (Second Amendment) Act.**—The purpose of this Act is to prevent award of double claim for the same injuries to seamen, i.e., one under the Personal Injuries (Emergency Provisions) Act, 1939, from the State, and another under the Workmen's Compensation Act, 1923, from their employers. This is secured by an amendment to s. 15 of the latter Act.

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conference held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth or Nations." India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty in Great Britain. And it respects in which India's position in the Empire is not the same as that of the Self-Governing Dominions, India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article 1 of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexes may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article 1, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first

time brought into direct and formal contact with the outside world as a separate entity. She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Government managed to secure a mandate for special action for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it. "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its

existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League. In the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including

the Washington Conference on Naval Armament in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, *e.g.*, the governing body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. Sir Atul Chatterjee from 1921 onwards acted as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932. H. H. the Aga Khan was elected President of the League Assembly for the year 1936-37.

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion.

The Secretariat of the League of Nations has established a Branch Office at New Delhi in pursuance of its policy of promoting more effective liaison with India. The Branch Office is a point of contact between Geneva and India, disseminating information to all interested in the League and its activities. In addition to all League documents which can be consulted at the Branch Office, it keeps for sale all publications of the League of Nations. Established in Bombay in 1932, it was removed to New Delhi as from December 1937. The present address of the Branch Office is 8, Curzon Road, New Delhi. Officer in-charge of the Branch Office : M. V. Venkateswaran, M.A., J.P.

Labour in India.

GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty-five per cent. of her working population are dependent on the soil for their principal means of livelihood. Agriculture by itself, however, does not always afford, either to the agriculturist or to the agricultural labourer, the wherewithal for keeping body and soul together. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door; but, the migration is generally always of a temporary character, and the agriculturist's contact with his land is seldom, if ever, permanently broken.

THE EARLIER FACTORY ACTS.

Up to almost the end of the 19th century there was no State control over conditions of employment in any industry. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safeguard factory workers from injury through accidents caused by entanglement with unfenced machinery in motion. With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men, notably the late Mr. Sorabjee Shapurjee Bengali, C.I.E., however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. This Act gave a limited measure of protection to children: firstly, by prohibiting their employment in factories if they were under seven years of age and also in two separate factories on the same day; secondly, by restricting the hours of employment to nine per day; and by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection the 1881 Act became a dead letter in most provinces. Most factories worked from daybreak to sunset. Sundays were usually working days and, if they were holidays, they had to be used for cleaning. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation in most fac-

ories was extremely bad and sanitation left much to be desired. In March 1889, the Government of India, after consulting local Governments, forwarded to the Secretary of State for India, definite proposals for the modification of the 1881 Act. The main amendments suggested were (1) the reduction of the number of workers necessary to constitute a factory to 20; (2) the raising of the lower age of children to nine; and (3) the restriction in the hours of work for women to 11. At the suggestion of the Bengal Chamber of Commerce and the Indian Jute Manufacturers' Association, a Factories Commission was appointed in 1890 to enquire into factory conditions in Bengal, Bombay, the North West Provinces and Oudh. On this occasion, female operatives were strongly opposed to any limitation of their hours of work if a similar limitation were not made for the hours of male operatives. It was recommended that the power to exempt any operative from the limiting their hours to 11 daily.

THE FACTORIES ACT OF 1891.

The main features of the 1891 Act were: (1) the reduction in the number of persons necessary to constitute a factory from 100 to 50 and the grant of the power to local Governments to notify concerns employing 20 or more persons as factories; (2) a compulsory stoppage of work for half an hour between noon and 2 p.m. for all operatives except those employed in factories working on the basis of approved shifts; (3) provision for weekly holidays; (4) the fixation of the lower and upper limits of the age of "children" at nine and 14, the limitation of their daily hours of work to seven and to day light, and the prohibition of their employment in dangerous work; and (5) the limitation of the daily hours of work of women to 11, the restriction of their employment during 8 p.m. and 5 a.m., and the provision that if women were worked for the full eleven hours permitted by the Act they should be given rest intervals amounting in the aggregate to at least an hour and a half per day. Government accepted the Commission of 1890 recommendations for all women from the 11 daily hours of work. The 1891 Act was added in the 1891 Act was regarded as a landmark. The Secretary Lord Lansdowne speaking in the Legislative Council at the time said, "We believe that the effect of this measure will be to place factory labour in India on a proper footing and our Bill will be accepted here and at home not as a mere prelude to still further restrictions but a settlement as final as any settlement of such a question can be."

Apart from the mass meetings of workmen which were organised in the 'eighties by humanitarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory

labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the huge industrial organisation that was rapidly coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unlettered power which he enjoyed of replacing all men who downed tools with black-leg labour.

INTRODUCTION OF ELECTRICITY AND THE GREAT PLAGUE.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread all over the country, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength. The immediate effect of these two events was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether.

The ravages caused by the plague were, however, not entirely devoid of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers; and the inequality between the demand for and the supply of labour naturally led to a marked improvement in agricultural wages. The beginning of the twentieth century saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

There was no further advance in factory legislation in India for twenty years after 1891. The period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, en-

gineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. The cotton and the jute industries showed top figures in this expansion and the demand for labour began to get more and more acute as years rolled on.

The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive. The raising of wages was one step, the provision of houses was another... Inside the factory less was done to make industrial labour attractive. It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked."

Conditions of work in factories in India during the period were inquired into by the Frier Smith Committee which was appointed in 1906 and by the Factory Labour Commission which was appointed by the Home Government in 1907. The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children and were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr. Nair) recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hour day for women with less power to local Governments to grant exemptions. The findings of the Commission were circulated to all provincial Governments for opinions; and, in the light of criticisms received, the Government of India drew up a fresh Bill "to consolidate and amend the law regulating labour in factories." This Bill was introduced in the Governor-General's Legislative Council in July 1909. In drafting the Bill, the Government of India followed the proposals made by Dr. Nair rather than by the majority of the Commission.

THE FACTORIES ACT OF 1911.

Want of space prevents us from recounting the various stages through which the Bill had to go before it was finally passed on the 21st March 1911. It naturally evoked considerable opposition from all quarters but this was not so strong as that which met the proposals of Government in the 'eighties and the 'nineties.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those

employed in continuous process factories. A number of provisions were made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated; but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect from the 1st of July 1912.

inside the factories had worsened. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

THE AFTERMATH OF THE WAR.

THE ADVENT OF THE GREAT WAR.

Matters in connection with the administration of the Factories Act of 1911 had hardly begun to be regularised when the whole world was convulsed by the outbreak of the Great War of 1914-1918. Metaphorically, the whole world was in the melting pot and Indian labour went into it too. The large contingents of Indian troops which were sent overseas had to be supplied with clothing, rations and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and material to the various seats of war. Heavy demands were also being made by both belligerent and other countries for raw products. Here was the opportunity for which India had been waiting for generations and she was not slow in seizing it. Much of her available arable land was put under cultivation, and there was an immediate and rapid expansion in every sphere of her industrial activity. Factories began to spring up everywhere; and all available means of transport were requisitioned for the carriage of men, beasts and goods to the ports and to the seats of manufacture. Indian labour was consequently faced with a more than capacity demand for its services. Local Governments were besieged by employers with requests for relaxations of existing restrictions in hours and conditions in factories. The ranks of the factory inspectorate were thinned as a result of some inspectors having joined the fighting forces and the duties of factory inspection were entrusted to officers already overburdened with other work. All the good preparatory work which had been done during the two years following the coming into effect of the 1911 Act appeared to be going by the board—but only temporarily, because Indian labour was no longer that dumb and inarticulate part of factory plants which it used to be during the years preceding the outbreak of the war. If workers were asked to work for longer hours they demanded and secured higher rates of wages. They were also not blind to the fact that employers were making bigger profits than before. Prices of all commodities were, moreover, rising and Indian operatives, like others, began to feel that they were not able to make both ends meet on prevalent rates. There were, therefore, frequent demands for increases in wage rates—demands which were not always granted without strikes; but the few strikes which occurred were mostly of an unorganised character and were short-lived because employers rather than allow production to suffer by prolonged stoppages of work reached compromises with their workmen by doing out small increases in wage rates at frequent intervals. Excessive hours of work, however, still continued to be the feature in all branches of industry and conditions

The victorious and successful emergence of Great Britain, her dominions and her allies from the World War of 1914-1918 led the people of the British Empire, and particularly of India, to believe that the dawn of an utopia had at last arrived. Everybody expected that prices would fall, that there would be an ample scope of employment for all and that the end of the war would see the beginning of a long stretch of continuous prosperity for industry, trade and commerce. Merchants and manufacturers all over the world had made phenomenal profits during the period of the war—thirteen large jute mills in Bengal alone paid dividends of 200 per cent. and over for the year 1918—and with the gradual closing down of munitions works and factories engaged in the manufacture of war materials, these merchants and manufacturers were looking for new fields for investment. Property valuations increased fivefold and more. The huge reconstruction loans raised by the victorious nations were subscribed several times over within a few hours of the lists being opened. Prices of industrial securities rocketed and there were still large amounts of liquid funds available for further investment. Industrialists therefore got together and floated big companies for transport services by rail, road, sea and air, for the construction of new mills and factories and for the exploitation of mineral resources. Heave building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour. The Utopian hopes which most men had built upon were, however, destined to evaporate into thin air sooner than the worst pessimists could have imagined. Two entirely unforeseen factors intervened to blast these hopes. The first was the worldwide epidemic of influenza which broke out in the year following the end of the War and which was responsible for a total death toll of over eight million persons in India alone. The second was that prices instead of falling rose more sharply than ever before—due, in a large measure, to the unprecedented depreciation in the currencies of most European countries.

Similar to the chance which Indian industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily and a situation very similar to that which followed the great plague of the 'nineties was created; but on this occasion there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, fancy rates of wages were demanded and were, in many cases, paid. Wages, in the more organised industries, however, lagged far behind the rapid rise in prices and real wages began to become appallingly low. The

beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, strikes on any organised scale upto then were rare and the employers were not giving anything away unless they were absolutely forced to do so. Prices, however, were still rising and it was literally becoming almost impossible for the workers to meet even their most necessary expenditure on the existing rates of wages. Had employers then exercised greater vision and been a little more farsighted in granting adequate increases in wages without being forced to do so, the history of the labour movement in India during the last twenty years, so far at least as industrial disputes are concerned, might have been entirely different. Employers, however, were deaf to the approaching roars of thunder and they had to pay the eventual penalty for their short-sightedness in this matter.

The war had done much to educate Indian labour in the conditions of work prevalent and the methods of agitation adopted in other countries. Conditions, particularly as regards working hours, which had formerly been accepted as inevitable, were no longer regarded as tolerable; and while trade unions, as they are understood in the West, were still almost unknown, the value of concerted action was being rapidly realised. A number of strike committees were formed and many large strikes of a fairly concerted character met with almost instantaneous success in several industrial centres in India. The idea of organisation for the purpose of securing better conditions of work was now becoming a reality.

committees formed themselves into trade unions similar to those which had been formed in the previous century in most European countries. These earlier unions were formed with two main objects in view: (1) increases in wages; and (2) reductions in hours of work. The first was an imperative economic necessity. The second had received considerable support from the Indian Industrial Commission which had been set up by the Government of India in 1916 'to examine and report upon the possibilities of further industrial development in India' and to make recommendations with particular reference to new openings and to assistance by Government. In their report which was published in 1918, the Commission noted a growing opinion in India in favour of a ten-hour day and they recommended that the possibility of reducing the existing statutory maximum hours should receive further examination. There was a recurrence of the influenza epidemic in the winter of 1919-1920 and this was responsible for a total mortality in India of considerably over a million. The acute shortage which had been created in the supply of available labour by the earlier epidemic was accentuated by the later one. This gave added strength to the labour organisations that were coming into being in the matter of wage increases and reductions in hours.

The allied problems of excessive hours and the shortage of labour, were, however, to be temporarily solved by factors the operation of which nobody had foreseen. The gradual demobilisation of the armies of the war and the closing

up of the various munitions works had disbanded tens of thousands of both men and women who in anticipation of re-employment in the great industrial enterprises which were being floated everywhere had spent the savings which they had secured during the war. Pre-war industries in the belligerent countries could not moreover, be re-organised at once. It was suddenly realised that resources would have to be husbanded and there was a perceptible decline in the purchase of commodities and the demand for manufactured goods. Production had necessarily to be eased off for stocks were accumulating. The spectre of unemployment loomed large. But, employers had learnt their lesson. The difficulty of securing workmen during periods of acute shortage of labour and they were not prepared to disband large bodies of their work-people. They were, therefore, not unwilling to consider reductions in hours of work. Some employers who had already reduced hours found that production far from having fallen off had actually improved. A new angle of vision came into being and the trail was laid for reforms of a worldwide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as possible, the application of these principles. The first step in this direction which was to be

Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

THE WASHINGTON CONFERENCE.

In accordance with a provision in the Treaty of Versailles, the first International Labour Conference met at Washington on the 29th October 1919 and sat for a month. India, as an original member of the League of Nations, was among the 39 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray representing Indian employers and Mr. N. M. Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases. The Washington Conference adopted the Hours Convention, but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

The ground for a reduction in factory hours had, however, already been partially prepared by the Government of India who, acting on the recommendations made in the matter by the Industrial Commission, had circularised all local Governments in June 1919 on the subject. The subsequent endorsement of a sixty-hour week for India by the Washington Conference received further support from the workmen themselves in the winter of 1919-20 which saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages. In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

CREATION OF GOVERNMENT LABOUR DEPARTMENTS.

Prior to 1920, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or All-India enquiries into wages or conditions of employment in industrial establishments. The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected

with labour made it necessary both for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of Commissioners of Labour in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921. Further details in connection with this office and other matters dealing with Government administration of labour subjects will be found in a special section towards the end of this note.

THE FACTORIES ACT OF 1922.

A Bill to amend the Factories Act of 1911 was introduced by the Government of India in the Legislative Assembly in March 1921 and was passed into law in January 1922. The Amended Act was brought into effect from 1st July 1922. The main provisions of the new law as it now stood were as follows:—

1. The definition of the term 'factory' was extended so as to bring within its scope all concerns using power and employing not less than 20 persons. Local Governments were invested with powers to declare as factories concerns which employed not less than 10 persons.
2. No child under 12 was to be employed in a factory. The hours of work of children between 12 and 15 were restricted to six per day. A rest interval of half an hour was to be given after four hours' work and employment in two factories on the same day was prohibited.
3. Women's hours were restricted to eleven per day and to sixty per week and their employment at night was totally prohibited between the hours of 7 p.m. and 5-30 a.m. except in seasonal factories in the fish curing and canning industries.
4. Men's hours in all factories were restricted to eleven per day and to sixty per week.
5. A operatives were to be given a compulsory weekly holiday and provision was also made for the grant of a compulsory rest interval.
6. Exemptions on defined principles were to be permitted. Provision was made for controlling excessive artificial humidification when injurious to the health of the operatives. Various other provisions dealing with the health and safety of the operatives were also incorporated in the new Act.

Subsequent amending Acts passed in 1923, 1926 and 1931 made improvements of a minor character and no changes were made in any of the main principles laid down in 1922 until 1934 when a new consolidating Act was passed. The main features of the 1934 Act are dealt with lower down.

PROPOSALS FOR FURTHER LABOUR LAWS.

Indian labour was jubilant at the successes which it had gained as a result of the passing of the Factories Amendment Act of 1922. Further legislative proposals in connection with the grant of workmen's compensation in the case of accidents, for the regulation of working conditions in mines and for the registration of trade unions were under the consideration of the Government of India who were consulting local Governments on the proposals which they had formulated. Proposals to safeguard employers against strikes which were as has been seen, becoming most disturbing to industry were also under consideration and the Government of Bombay, acting on the recommendations of the Provincial Legislative Council, appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, editor-in-chief of *The Times of India* "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." In their report, the Committee, after setting down their views on various schemes of welfare which employers might adopt to improve the conditions of employment and of the life of their workpeople so as to make them more contented and less amenable to the influence of outside agitators, recommended that a statutory tribunal on the lines of the Industrial Court created by the United Kingdom Act of 1919 should be set up in the Bombay Presidency; and that all strikes which could not be settled without Government intervention should be referred to this Court. The Government of Bombay, acting on the recommendations of this Committee, drew up a Bill on the subject which was introduced in the local Legislative Council in 1923-24. In the meanwhile, however, the Government of India informed the Government of Bombay that they themselves were proceeding with similar legislation of an All-India character and they requested the local Government to abandon their own measure. The Workmen's Compensation and the Mines Acts were passed in 1923 and the Trade Unions Act was passed in 1926 but the All-India Trade Disputes Act was not passed till 1929. The main features of these several pieces of labour legislation will be described in the special sections dealing with these subjects.

THE TURNING OF THE TIDE.

Unfortunately for Indian labour, a period of acute depression set in in all industries towards the end of the year 1922. Some of the first tasks to which the Labour Office created by the Government of Bombay in 1921 had set itself were to compile a cost of living index for working classes in Bombay City, to make an enquiry into their standard of life by the collection of family budgets for representative working class families and to make an enquiry into wages and hours

of work in the cotton mill industry in the Bombay Presidency. The cost of living index compiled by that office—the first of its kind in India—showed that except for a slight fall during the earlier months of the year 1920, prices had been steadily rising after the end of the war for the next two years. The peak was reached in October 1920. The annual average of the monthly index numbers (1914=100) for that year was 183. A gradual decline, however, set in from the beginning of the following year and the annual average for the year 1921 registered a fall of ten points on the figure for 1920. A further fall of nine points was registered in the annual average for the year 1922. The year 1923 opened with a sharp decline to 156; but for the next five years—that is, up to the end of the year 1927, the optimum monthly variation was within eleven points between 150 and 161. The Report of the Family Budget Enquiry conducted by the Bombay Labour Office showed the standards of earnings and expenditure of some two thousand representative working class families and single men during the years 1921 and 1922 but no comparable figures were available for any other year. The report of the cotton mills' wages enquiry which was published early in 1923 showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent. higher in 1921 than in 1914. The Ahmedabad Millowners' Association made the first organised post-war move in India for wholesale reductions in wages. A cut of 20 per cent. was announced with effect from the 1st April 1923. The strike of the Ahmedabad cotton mill workers which followed was by far the largest and the most disastrous that has ever occurred in that city. It affected 56 out of 61 working mills, involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. It began on the 1st April and lasted till the 4th June. On that date a compromise was arrived at by the terms of which wages were to be reduced by 15½ per cent. instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

Cotton textile millowners in Bombay had met demands for higher wages between 1917 and 1920 partly by the grant of dearness of food allowances and partly by the payment of an annual bonus of one month's pay dependant on profits. In 1924, the Millowners' Association, Bombay, decided that the profits for 1923 would not justify the payment of the bonus. The workers of all mills in the city struck work. The Government of Bombay appointed a Committee of Enquiry under the Chairmanship of Sir Norman Macleod, Chief Justice of the Bombay High Court. The Committee's report was entirely against the workers. The Bonus Dispute Strike in Bombay in 1924 was by far the worst that had ever occurred in the country until that year and resulted in a time loss of nearly eight million working days.

ABOLITION OF THE EXCISE DUTY ON COTTON MANUFACTURES.

The depression which set in in 1922 continued for several years. In the year 1925, however, the Government of India came to the rescue of the Cotton textile industry and the workers

employed in it by abolishing the excise duty of 25 per cent., which had been levied on cotton manufactures in India for many years past. In that year millowners in Bombay announced a cut of 12½ per cent. in wages. This announcement was followed by a general strike which lasted for over two months and which resulted in a time loss of nearly eleven million working days. Both sides were adamant but the Millowners had given an undertaking to Government to drop the proposal for a wage cut if the excise duty was abolished. The strike, therefore, ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November 1925. This strike "was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation, they were able to take concerted action and to offer

a stubborn resistance against any attack on their wages."

It will have been noticed that so far prominence has been given only to the big industrial disputes that occurred in the textile industry in Western India. This should not be taken to mean that other industries and the other provinces in India were not troubled with industrial strife. As soon as Indian labour had realised the potential value of the strike as a weapon for securing redress of grievances, strikes began to get extremely frequent and the quinquennium 1921-1926 saw the outbreak of no less than 1,154 strikes in India involving nearly two million workpeople and causing a total loss of thirty-seven and a quarter million working days. Summary statistics for the main industries are incorporated in the following table:—

Consolidated Statement of Industrial Disputes for the Quinquennium 1921-25.

Industries.	Number of disputes.	Number of workers involved.	Man-days lost.
Cotton spinning and weaving	505	815,341	24,967,386
Jute	146	575,370	3,454,356
Engineering (excluding railway workshops) ..	65	71,590	1,031,779
Railways (including railway workshops) ..	59	135,254	3,687,504
Mines	29	30,632	261,198
Others	350	291,327	3,915,681
Total ..	1,154	1,919,714	37,317,904

A PERIOD OF QUIESCENCE.

The two years 1926 and 1927 were, as compared with the quinquennium which has just been reviewed, a period of quiet consolidation of their respective positions for both the employers and the employed and also for Government who had completed a heavy programme of labour legislation. There was a slight revival in trade and employers after the bitter experience they had had of disastrous strikes locating to industry were content sleeping dogs to lie as far as wages were concerned. Governments and employers had completed extensive industrial housing schemes, many employers had expanded their activities for the people and the cost of living was on the decline. The factory law had been improved by the 1927 Act and the avenues for evasions were so barricaded as to make breaches of the law most difficult if not impossible. Hours of work, as compared to those obtaining five years previously, were congenial and permitted of sufficient also of some relaxation and recreation. A beginning was made at the Manchester Mill of these and other factors were conducting to a decided improvement in the standard of life and

the conditions of employment of industrial labour. The chief Indian industries were, however, still showing adverse balances in their profit and loss accounts and the shareholders were getting little or no return on the capital which they had invested in industry. The shareholders were consequently becoming somewhat restive, and harangues at the annual general company meetings by the more disgruntled of them were becoming frequent enough to be taken up by the Indian Tariff Board (Cotton Enquiry) appointed in 1926 had also made a number of recommendations aiming at a more efficient conduct and management of cotton mills in India. The more progressive means

had been successively attempted and received a measure of studious consideration and three go-ahead firms of cotton mill agents in Bombay City—Messrs. E. D. Sassoon and Company, Messrs. James Finlay and Company, and Messrs. Killick Nixon and Company, were asked to try out schemes whereby would be asked to look after of spindles and more looms. A beginning was made at the Manchester Mill of these and other factors were conducting to a decided improvement in the standard of life and

the agents. The attempt was at once met by a prolonged strike in that mill.

The advent of rationalisation in Indian industries synchronised with the entry of the principles of communism into the country and the formation of the Workers and Peasants' Party on models similar to those obtaining in Soviet Russia. Many communists secured appointments on the executives of several trade unions in India and they were not long before they made their presence on these bodies felt by inciting workers to go on strike on the most flimsiest of pretexts. The immediate object of these communists was not so much to improve the condition of industrial workers as to cause prolonged stoppages of work thereby sending batches of dissatisfied and disgruntled workmen back to their native villages to preach revolutionary doctrines of class hatred, the uprooting of capitalism and the smashing of stable Governments.

THE CLIMAX OF INDUSTRIAL STRIFE IN INDIA.

The year 1928 was one in which a handful of communist agitators in India secured a large measure of control over her industries through their almost complete domination over labour. They engineered large scale strikes in most industries and brought several to the verge of an almost complete standstill.

The most disastrous of the strikes which occurred in the year 1928 was that in the cotton mills in Bombay City and which alone was responsible for the loss of over twenty-two and a half million working days out of a total of over thirty-one and a half million lost to all Indian industries in that year. The direct cause of this disastrous strike which lasted from the middle of April to the beginning of October was the fear of unemployment created by the decision of certain millowners to introduce 'rational' methods of work in their mills.

APPOINTMENT OF BOMBAY STRIKE ENQUIRY COMMITTEE.

The strike dragged on until the 4th of October when the Government of Bombay convened a conference of the representatives of both sides under the chairmanship of the Hon'ble Sir Ghulam Husain Hidayatallah. At this conference the representatives of the strikers consented to call off the strike if Government would agree to appoint an impartial committee of enquiry to examine the various questions under dispute. The strike was accordingly called off as soon as Government announced the appointment of a committee under the chairmanship of the Hon'ble the Acting Chief Justice of the High Court of Bombay, Sir Charles Fawcett.

The deliberations of the Fawcett Committee lasted for over five months and their report which was published on the 26th March 1929 still continues to be one of the standard works of reference on conditions of employment in the cotton textile mills in Bombay City. The Committee held that the proposals of the Millowners' Association for the standardization

of wage rates and for the fixation of the numbers to be employed on different types of machines were in the main fair and reasonable and that while there was justification for the Association's proposal to effect a cut of 7½ per cent. in weavers' wages there were reasonable objections to be urged against its adoption.

The Committee also held that that part of the standardisation scheme which was called the "Rational" or "Efficiency" system and which aimed at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable. The Committee further held that the Association's proposals with regard to standard standing orders for the operatives about the conditions of their employment were, in the main, fair and reasonable.

On balance, the findings and recommendations of the Fawcett Committee were more favourable to the workers than to the employers. Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore.

AN ACCUMULATION OF UNREDRESSED GRIEVANCES.

The widespread industrial strife of the years 1928 and 1929 brought out several facts in connection with Indian labour prominently to the surface. The most important of these was that the workers employed in Indian industries had a large accumulation of grievances which required early examination and redress, if possible. A very large majority of the settlements of the disputes that had occurred in the decade following the end of the Great War were hardly 'settlements' at all if the word is considered in the sense of solutions acceptable to both sides. In most cases the workers had been beaten into surrender owing to the fear of unemployment consequent on their places being filled up by black-leg labour or were forced into submission as the result of the complete exhaustion of their resources. Although the trade union movement had penetrated into most industries, it has not even yet, except perhaps in the cotton textile industry in Ahmedabad, covered the majority of the workers in any particular units or groups of units; and in no case had any union collected a sufficiency of funds to finance a strike. Very few of the existing unions had secured complete recognition by the employers concerned and in most cases the illiterate workmen had no level-headed persons to argue their cause with their employers.

LACK OF COMPREHENSIVENESS IN EXISTING LABOUR LAWS.

The Acts made of the Isolation (1) The Factories Act of 1922, (2) The Indian Mines Act, 1923, and (3) The Workmen's Compensation Act, 1923. These Acts had conferred several

benefits, privileges and advantages on Indian workmen; but as compared with similar pieces of legislation in the other industrialised countries of the world, they were of an exceedingly limited scope and character. This was due to the fact that in treading new ground, the Government of India had necessarily to proceed with circumspection and a measure of caution.

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR.

Reverting to the labour laws of 1922-1923, seven years' administration of these laws had brought several defects to light. Certain administrative defects had been rectified by Amending Acts but it was gradually felt that much of the legislation was of a very halting character and that it did not go far enough. Several trade union leaders who had attended ten successive sessions of the International Labour Conference as Labour Delegates or Advisers had availed themselves of the opportunity offered by their being sent to Geneva of making enquiries and studies of labour questions in European countries before returning to India. After their return to India, these leaders started newspaper and platform agitation for both reform and expansion of the existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on

"to enquire into and report on conditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and the employed; and to make recommendations." The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the Commission were the Rt. Hon. Shrinivasa Sastri, P.C.; Sir Alexander Murray, Kt., C.B.E.; Sir Ibrahim Rahimtoola, K.C.S.I., K.B.E., C.I.E.; Sir Victor Sassoon, Baronet; Sir Andrew Clow, Kt., C.S.I., C.I.E., I.C.S.; Dewan Chaman Lal, M.L.A.; Miss Beryl M. Le Poer Power, Deputy Chief Inspector, Trade Branch, England and Messrs. N. M. Joshi, M.L.A., Kabeeruddin Ahmed, M.L.A.; G. D. Birla, M.L.A.; and John Cliff, Assistant General Secretary, Transport and Railway Workers' Union, England, Mr. S. Lall, I.C.S., and Mr. A. Diddin from the India Office, London, were appointed Joint Secretaries, and Mr. A. H. Green, Assistant Secretary, Mr. S. K. Deshpande, Assistant Commissioner of Labour, Government of Bombay, was appointed Statistician and Lt.-Col. A. J. H. Russell, C.B.F., Medical Assessor to the Commission. The Commission arrived in India on the 10th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the railways and associations of the employees and the employed left for England on the 22nd March 1930 to collect further evidence in that country. The Commission returned to India in the month of October of the same year and after completing that part of their tour which

had been left unfinished in the previous winter, went to Delhi in November to draft their Report.

1929—A YEAR OF CROWDED EVENTS.

The year 1929 was a very momentous one in the history of the labour movement in India crowded as it was with events of prime importance. Early in the year there was extensive rioting in Bombay City which lasted for several weeks. An Enquiry Committee appointed by Government found that the immediate cause of these riots was the inflammatory speeches made by extreme left wing labour leaders. In February all the ring leaders among the ranks of the Communists were arrested and sent to Meerut for trial. References have already been made to the publication of the Report of the Bombay Strike Enquiry Committee and to the announcement of the appointment of a Royal Commission on Indian Labour. Mention has also been made of the passing of the Trade Disputes Act in that year. An Act amending the Workmen's Compensation Act was also passed by the central legislature and the Government of Bombay took the initiative in provincial labour legislation by passing a Maternity Benefits Act providing for monetary compensation by factory employers to their women workers for loss of wages during periods immediately prior to and following confinement.

The chief communist leaders had been arrested but their henchmen were not. Imbued with communist principles, these endeavoured to carry on the industrial strife of the year before. A dispute arose in the Spring Mill in the April over the question of the dismissal of one worker, this was made a *casus belli* for the declaration of another general strike in the cotton mill industry. This strike, however, did not extend to all the mills in the city and island of Bombay as that of the previous year had done but still it was of a fairly general character involving 109,232 workers in 62 mills. It lasted from the 26th April to the 18th September and was responsible for a total time loss of nearly seven million working days. The Government of Bombay took advantage of the new Trade Disputes Act and appointed a Court of Enquiry under the chairmanship of the Hon. Mr. Justice Pearson of the Calcutta High Court to make a full investigation into the causes of the strike. The Court sat continuously for over a month and in their report which was published on the 16th September they came to the unanimous conclusion that the whole of the blame for the calling and the continuation of this strike rested with the Bombay Ginn Kangar Union. The moral effect of this report was so great that the Union called off the strike unconditionally on the day following its publication.

Another important strike which occurred in India during the year 1929 was one of the employees of the B.B. & C. I. Railway's Loco. and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad

allowances and failing a restoration of the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims.

SPLIT IN THE ALL-INDIA TRADE UNION CONGRESS.

The last important event in this year of crowded events was the split which occurred in the Trade Union Congress at its tenth session which was held in Nagpur in the month of November of that year under the presidency of Pandit Jawaharlal Nehru. The Trade Union Congress was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual labour unions in India which till then remained inchoate and were unable to take concerted action; and (2) to recommend workers' delegates to the various sessions of the International Labour Conference. It remained the central organisation of the trade union movement in India for nearly a decade and most of the important unions in India were affiliated to it. The Congress met in a full-dress session once every year and discussed various leading questions connected with Indian labour. Early in 1929 the Bombay Girni Kamgar Union and the G.I.P. Railwaymen's Union—two organisations controlled almost entirely by communists—secured affiliation to the Congress. As the elections to the executive body of the Congress are conducted on the basis of the membership strength of the individual affiliated unions, the communists were able to capture a majority of the seats on the executive through the membership of these two unions and the Tenth Session was therefore entirely dominated by the communist section of the movement. Resolutions were passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League against Imperialism and for the appointment of the Workers' Welfare League, a communist organisation in England, as agents of the Congress in Great Britain. The passing of these resolutions marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by communist agents in India and brought to a head the question whether the trade union movement in India should be under the leadership of genuine trade unionists or of the votaries of communism. The moderate sections under the leadership of Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. K. Bakhale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of The Indian Trades Union Federation in order to co-ordinate the activities of non-communist trade unions in India. Further details in connection with these two All-India federations, their quarrels made for unity.

Trade Unionism and Trade Union Law.

THE CALM AFTER THE STORM.

The third decade of the twentieth century had been a most momentous period in the history of labour in India crowded as it was with almost continuous industrial strife, the appointment of committees and commissions to enquire into and make recommendations in connection with the causes of this strife and the laying of the foundation stones for a first class code of labour laws for the country. The prolonged and disastrous strikes of the years 1927 and 1929—especially of the latter year in the storm centre of India's principal industry—had completely exhausted the resources of the workers. After the end of the general strike in the cotton textile mills of Bombay of the year 1929 trade unionism, except perhaps in Ahmedabad, was thoroughly discredited. Both the workmen and such of their organisations as existed had been defeated most ignominiously and the workers began to lose faith in their leaders. There had been no wholesale reductions in wage rates in any of the larger centres of the textile industry in India since the cut of 15 per cent. in the wages of the cotton mill workers in Ahmedabad in 1923 and with each successive fall in prices, real wages naturally improved. Apart from the question of the sufficiency of the existing rates for the maintenance of a decent standard of life, the wage rates prevalent in 1930 and 1931 did permit margins for wiping out old debts and as the employers made no general move in these two years to reduce rates, this period was one of comparative industrial calm for the whole country.

The Government of the Central Provinces and Berar followed the Government of Bombay by passing a Maternity Benefits Act in 1930. In 1931, the Government of India appointed a Court of Enquiry under the Trade Disputes Act to enquire into certain questions affecting labour arising out of the large reductions which Indian railways were making in their staffs. This Court made certain recommendations regarding the absorption of the retrenched men in other industries and for their re-employment when suitable opportunities arose in the future and also for the payment of a more generous scale of retirement gratuities. The workers on this occasion, however, had to accept the inevitable and they were not slow in recognising the elementary and cardinal principle that no organisation could possibly maintain staffs which were surplus to requirements. The extreme left wing in the leftist Trade Union Congress came to the conclusion in 1931 that the Congress was not as revolutionary as what it should be and this element broke away to form the All-India Red Trade Union Congress. It thus happened that instead of there being one co-ordinating body at the apex of the trade union organisation in the country to guide and control the movement, there were four separate federations the majority of which were useless and effete bodies with little influence and trifling membership.

PUBLICATION OF THE ROYAL LABOUR COMMISSION'S REPORT.

The most notable event in the world of Indian labour during the year 1931 was the publication, in the month of June, of the report of the Royal

Commission on Indian Labour. The report is a document of first-rate importance dealing with almost every aspect of the labour problem in India and it contains many hundreds of recommendations covering a very wide field of subjects. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication; and it will continue to be the text-book for social legislation and labour welfare in India for many years to come.

A summary containing the principal recommendations of the Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India have published annually since 1932 reports on the action taken by the Central and Provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Calcutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers and Workmen's (Disputes) Act which had been passed as early as 1880 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead letter was repealed in 1932. Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Act to control the deductions which employers may make from wages in respect of fines and to secure the early payment of due wages was passed in 1936. Various other proposals for new labour legislation in connection with employers' liability (re: "common employment" and "assumed risk"), workmen's compensation to agriculturists and forestry, fixation of hours of labourers, allotment of seamen's wages, the shortening of wage periods, arrest and imprisonment of industrial workers for debt and for the prevention of the besetting of establishments by money-lenders or debtors, have been considered. In the Government of India in consultation with the various provincial Governments and some of these resulted in the introduction of Bills in the legislature. It is most unlikely, however, that all these proposals will result in legislation, because very weighty objections were raised during circulation on the various practical difficulties which would have to be contended with in the administration of any laws that may be framed to govern these matters. With the advent of Provincial Autonomy, however,

it is more than probable that the history of future Labour Legislation in India will be of a Provincial character rather than central.

BEGINNING OF A PERIOD OF LARGE WAGE-CUTS.

... of prices which in 1930 continued ... of living index for working classes in Bombay City touched par or 100 (1914=100). Wages in most industries, on the other hand, had continued almost at the same high levels of 1929-30—in many cases rates early in 1933 were double or more than double those prevalent in 1914. Following the cut of about 15 per cent. in wages which had been effected in the Ahmedabad cotton mills in 1923, the cotton mill workers in that centre had submitted a demand for a restoration of the cut in 1923. The matter was referred to arbitration. Workers on the spinning side of the industry secured an increase of eight per cent. and on the weaving side five per cent. The conciliation board appointed in connection with the Dohad dispute had decided in favour of the workers and against the administration of the B.B. & C. I. Railway. Employers, therefore, were beginning to feel that the public generally and impartial arbitrators and conciliators in particular were determined that the standard of life which Indian industrial workers had attained as a result of the hard battles which they had fought must be maintained. They were therefore very chary of initiating proposals for reductions in rates. The commencement of the year 1933, however, saw the beginning of a new wave of depression in industry. Jute mills had already resorted to short-time working and several cotton mills and other factories were being compelled to close down. One firm of managing agents who controlled ten large cotton textile mills in Bombay City crashed and as a result of this crash all the mills under their control were compelled to stop work. Several of the mills under the control of another large firm ... had to suspend work temporarily. ... mills were faced with ... to reduce wages and so to lower costs of production, or (b) to close down. The Technical Wages Sub-Committee of the Millowners' Association, Bombay, to whom the question of the necessity for a reduction had been referred earlier in the year, ... against the advisability of collection in the matter and advised that each affiliated unit should take independent

Acting on the recommendations made in the matter by the Bombay Millowners' Association the affiliated mills started adopting measures in effecting reductions in rates by announcing varying cuts in the dearness allowances. This unilateral action was considerably helped by the large volume of unemployment that had been created consequent on the closure of many units and the workers were faced with one of two alternatives: (1) acceptance of the reduced rates offered; or (2) unemployment. They chose the former. Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the

matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6½ per cent. subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days. In recounting the course of events in Ahmedabad those in Bombay have been anticipated by about a year.

INSTITUTION OF A DEPARTMENTAL ENQUIRY INTO WAGE CUTS.

The year 1934 in the labour world in Bombay opened with an insistent demand by the more moderate labour leaders, particularly Mr. R. R. Bakhale, M.L.C., for an impartial enquiry into the wage cuts and unemployment in the cotton mill industry in the Bombay Presidency. The Government of Bombay decided that a departmental enquiry into the nature and the extent of wage-cuts and the extent of unemployment in the cotton textile industry in the whole of the Bombay Presidency, should be conducted by Mr. J. F. Gennings, C.I.E., C.B.F., Commissioner of Labour. It was unfortunate that whilst the Departmental Enquiry was in progress, the cotton mills in Bombay City were again affected by a prolonged strike of a semi-general character. There was also a general strike in all the cotton mills in Sholapur which lasted for over three months. In order to trace the causes of this strike we must leave the work of the Departmental Committee *pro tem* and go back to the arrest of the thirty communist leaders early in 1929 on charges of kidnapping and organised conspiracy to deprive the King of his sovereignty of British India.

THE FAMOUS MEERUT TRIAL.

The trial of the thirty communist leaders in what is now historically known as the famous Meerut conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Yorke, the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut. Such of the communists as were acquitted and were subsequently released from jail made frantic efforts to regain their hold on trade unions, and actually succeeded in getting into some of the more important of them—notably the railway unions and the Bombay Ginni Kamgar Union. Assisted by such of the extreme leftists as had not been jailed they formed a labour committee on an All-India basis early in 1934 to call a general strike in all cotton mills in India. The partial strike in the Bombay cotton mills in April and May and the general strike in the Sholapur mills were almost entirely due to the efforts launched by this committee but with the exception of Bombay and Sholapur they did not meet with any appreciable measure of success in any other centre of the industry in the rest of India.

THE PUBLICATION OF THE REPORT OF THE DEPARTMENTAL ENQUIRY.

The report of the Departmental Enquiry conducted by the Bombay Labour Office was published on the 21st June 1934 and the strike in the Bombay mills was called off almost simultaneously. This enquiry was perhaps the most comprehensive of its kind that had yet been undertaken in India into wages and conditions of work in the textile industry and the information and conclusions which it contained were the subject of an India-wide discussion on public platforms and in the press. The Departmental findings on some of the questions referred to the Labour Office for enquiry were as follows.—

1. *Extent of Wage Reductions.*—Wages in Bombay City were lower by 21 per cent. in April 1934 as compared with July 1926 and in Sholapur by 17 per cent. Wages in Ahmedabad had risen between five to six per cent. during the same period.

2. *Question of Uniformity in the Reductions.*—The reduction in Sholapur was uniform in all mills but as the Bombay Millowners' Association permitted its members to take independent action as they pleased, the extent of the cuts varied widely between mill and mill.

3. *Extent of Fall in Cost of Living.*—The cost of living had fallen in all centres. Taking July 1926 as 100, it fell by 29 points in Bombay City in April 1934. In Ahmedabad City, the fall in December 1933 as compared with August 1926 was 31 per cent. and in Sholapur there was a fall of 28 per cent. between February 1927 and December 1933.

4. *Position re: Real Wages.*—Bombay, April 1934 eleven per cent. higher than in 1926; Ahmedabad, 54 per cent. higher; and in Sholapur 15 per cent. higher.

The publication of the report of the Departmental Enquiry was followed by the Millowners Association, Bombay, adopting a simple scheme of standard rates for unskilled occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the dearness allowance for workers had fallen to less than 40 per cent. to raise this allowance to 40 per cent. after the coming into effect of the 54-hour week on the 1st January 1935.

BOMBAY PASSES A TRADE DISPUTES CONCILIATION ACT.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an ex-

officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute. This Act was repealed with effect from the 1st August 1939 when the Bombay Industrial Disputes Act, 1938, which we describe lower down, was brought into operation for the cotton textile industry in the Province of Bombay. During the period of nearly four years for which that Act had been in force, remarkable results were achieved and there was much less industrial strife in the cotton mill industry in Bombay City than there had been prior to 1934.

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS.

By far the most notable event in the field of Government administration of matters connected with labour in India was the institution by the Government of Bombay, in 1934, of a General Wage Census to cover as many industries as possible in the Bombay Presidency. The Royal Commission on Indian Labour had recommended that before any machinery was set up for fixing minimum wages, complete surveys of wages and conditions should be undertaken for such industries in which there was a strong presumption that conditions warranted detailed investigation and that the results of these surveys should be the basis on which it should be decided whether the fixing of a minimum wage would be desirable and practicable. Until 1934 the Labour Office of the Government of Bombay had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Government of Bombay felt that before any question in connection with the creation of wage boards for fixing minimum wages could be considered, it would be necessary to have accurate and reliable information on wages and conditions of work in as many industries as possible—both organised and unorganised. They accordingly instructed the Labour Office to first make a survey of wages and conditions in factory industries the first part of which should cover all perennial factories and the second seasonal factories. This census covered nearly 750 factories in over 20 different industries spread over 80 towns and villages in the Province of Bombay. The first of the series of the General Wage Census reports covering the engineering trade was published in December 1935, the se-

cond covering the printing industry was published early in March 1936, the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937; and the fourth covering the Oils, Paints and Soap; the Match manufacturing and fourteen other miscellaneous industries was published in May 1939. These reports contain a fund of most valuable information regarding wage rates earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

THE INDIAN FACTORIES ACT, 1934.

The Royal Commission on Indian Labour made several very important recommendations for substantial amendments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of factory owners, of the requirements of the Act. The Government of India accepted most of the Royal Commission's recommendations and drew up a draft Bill for an entirely new Act and this was introduced in the Legislative Assembly on the 8th September 1933. It was passed into law at the summer session of the Assembly at Simla in 1934 and received the assent of the Governor-General on the 20th August of that year. The new Act was brought into effect from the 1st January 1935.

Full details have been given in this note of the first Factories Act of 1891 and of the subsequent amending Act of 1911, of the 1911 consolidating Act and of the Amending Act of 1922. The Amending Acts of 1923, 1926 and 1931 did not introduce any new principle of major importance and were merely intended to remove administrative difficulties. The main provisions of the Indian factory law as it stands to-day are given below with notes regarding the new principles which were introduced by the 1934 Act.

(a) *Classification of Factories.*—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton spinning, cotton or jute pressing, the decortication of ground-nuts or the manufacture of ground-nut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a local Government may, by notification in the local official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent

on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(b) *Age and Sex Groups.*—Prior to the 1934 Act, factory operatives were divided into three age and sex groups: (1) adult males, (2) adult females, and (3) children of both sexes, i.e., persons over 12 and under 15 years of age. A fourth group of 'adolescents' has now been introduced. These are defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(c) *Hours of Work.*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to ten per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(d) *Spreadover.*—The principle of "spreadover," i.e., the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory was introduced in factory legislation in 1934 for the first time. The spreadover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, e.g., in the fish curing industry, continues to be allowed.

(e) *Artificial Cooling and Humidification.*—The provisions incorporated in the 1922 Act with regard to the control of artificial humidification were expanded. A new principle was introduced whereby power was given to local Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) *Welfare.*—The new Act made provision for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous

substances; (2) for adequate shelter for rest in factories employing more than 150 persons; (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.

(g) *Rest Intervals and Holidays.*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(h) *Overtime.*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.

(i) *Certificates of Fitness for Children.*—The 1934 Act gave powers to local Governments to make rules prescribing the degree of fitness to be attained by children and laid down that whenever such a standard has been laid down, no child failing to obtain it can be certified for employment in a factory.

(j) *Security of Factory Structures.*—Another new feature of the 1934 Act is the power which has been given to factory inspectors to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Local Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(k) *Exemptions.*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limited these powers and prescribed further that no exemptions were to be granted in respect of the provisions for spreadover, prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years.

The Factories (Amendment) Act, 1940, passed by the Central Government was brought into operation from 9th April 1940. This Act applied to power factories employing from 10 to 19 persons in which children are employed and extends to them the provisions of the Factories Act, 1934, relating to health, safety, regulation of child labour and registration. It is felt that this amendment will lead to the complete non-employment of children in small factories because rather than be compelled to register under the Act, the owners concerned would prefer not to employ children at all.

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the Central Legislature early in 1936. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 edition of the Indian Year Book. The more important provisions of this Act which were brought into operation with effect from the 20th May 1937 are as follows :—

(a) *Scope of Application.*—The Act in the first instance applies to factories and railways but local Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(b) *Wages.*—‘Wages’ for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees’ contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Bonuses offer a wide loophole to employers to evade limitations in respect of fines because if the granting of bonuses were permitted there would be nothing to prevent an employer from setting apart substantial portions of wages as bonuses to be paid conditional on certain standards of conduct, efficiency and attendance being attained. If a workman failed to attain the specified standards, he would lose the bonus or in other words he would be fined to that extent. It was necessary, therefore, for the Government of India to so amplify the definition of the term ‘wage’ as to cover all bonuses. All the provincial Governments in India were, however, not quite clear whether the term ‘wages’ included ‘bonuses’ or not. The Government of Bombay took the lead in the

matter by notifying all factories and concerns to which the Act applied that in all cases where bonuses were paid for good attendance, good work, good production or matters of that kind, such bonuses became payable whether the conditions governing the earning of the bonus were fulfilled or not. Certain mills in Ahmedabad, however, continued the payment of these conditional bonuses and in June 1938 the Inspector under the Payment of Wages Act, Northern Division, filed two applications against the Manager of the Arvind Mills for making illegal deductions from the wages of some employees of the mills in the shape of good attendance and quantity bonuses. Mr. I. T. Almoula, City Magistrate of Ahmedabad, held that such bonuses were wages and decided against the Arvind Mills in both the cases and directed that the deductions should be refunded to the workers. The Manager of the Arvind Mills appealed against these decisions and the appeals were heard by Mr. I. C. Munsiff, Assistant Judge, Ahmedabad. Judgment in the cases were given on the 17th April 1939. Mr. Munsiff held that the magistrate’s interpretation was reasonable and there was no reason to interfere with it. Both the appeals were dismissed with costs. The Arvind Mills thereupon filed an appeal in the High Court. As we go to press we understand that the High Court has reversed the Ahmedabad judgments. It has held that all bonuses must be earned.

(c) *Wage Periods.*—No wage period shall exceed one month. (Amendments moved by labour members to reduce this to a week and a fortnight were defeated), and all wages are required to be paid in coin and/or currency notes.

(d) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions.*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a local Government may, by general or special order, authorise. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deduct-

ed annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

(f) *Fines*.—No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines may be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the local Government or of an authority which a local Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period shall not exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Local Governments have been empowered to make rules in connection with most of these matters.

(g) *Deductions for Absence from Duty*.—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the local Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may be any such contract or terms be due to the employer in lieu of due notice." By an amending Act passed early in 1937 an explanation has been added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(h) *Deductions for Recovery of Advances*.—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses; and recovery of advances of wages not already earned are to be subject to rules to be made by local Governments.

(i) *Contracting-Out*.—No contracting-out is permitted.

(j) *Procedure*.—Local Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure

has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the courts ignore the fact that even in such cases delay in making payments had occurred.

(k) *Administration*.—Inspectors of factories are to be responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to local Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

C. P. UNREGULATED FACTORIES ACT, 1937.

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act seeks to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act, 1934, does not apply. "Unregulated factory" has been defined as "any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on:—(i) bidi making, (ii) shellac manufacture, and (iii) leather tanning." A "child" has been defined as a person who has not completed his fourteenth year. The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

LABOUR UNDER THE NEW AUTONOMOUS PROVINCIAL GOVERNMENTS.

With the advent of the new reforms under the Government of India Act, 1935, full provincial autonomy was established in all Provinces in India with effect from the 1st April 1937. The Indian National Congress which is the largest, the most influential and the most well organised political party in India contested most and won the majority of the seats for the Legislative Assemblies in the Provinces of Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa. The Labour Policy of the Indian National Congress, as set out in its election manifesto is "to secure to the industrial workers a decent standard of living, hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards; suitable machinery for the settlement of disputes between employers and workmen; protection against the economic consequences of old age, sickness and unemployment; and the right of workers to form unions and to strike for the protection of their interests." The earlier resolution of Congress on fundamental rights generally states in addition, that "the state shall safeguard the interests of industrial workers" and makes special reference to women workers and children. Congress Ministries, for reasons set out elsewhere in this volume, accepted office in July 1937 but resigned in all Provinces in November 1939 owing to the alleged failure of the British Government in defining clearly the war aims of Great Britain with special reference to India. Whilst in power, the Labour Policy of the Congress was amplified by responsible Ministers in various Provinces either by the issue of Press Notices or by statements made in public speeches. For example, in addressing a meeting of the representatives of the workers on the 19th February 1938, the Honorable the Minister for Finance in the Central Provinces declared that "the Congress Policy in regard to labour will be uniform in all Congress Provinces and it will be the aim of the Congress to secure you your rights without any struggle as far as possible." The most comprehensive statement with regard to this policy is contained in a press note issued by the Government of Bombay in August 1937 from which the following important passages are reproduced below:—

"Government are aware that they are in a special sense responsible for the welfare of the industrial worker. The process of industrialisation, which has gone furthest in this Presidency as far as India is concerned, takes away the independence of the worker, places him in a difficult environment and creates social and political problems of a peculiar and complicated character. . . . This Government has therefore accepted it as its duty to endeavour to work out this programme (as set out in the Election Manifesto) using all the means at its disposal. Government will try to adjust the social and economic mechanism in such a way as to assure to the worker the satisfaction of at least his minimum human needs, security of service, provision of alternative occupations in periods of inevitable unemployment and maintenance during periods of unavoidable incapacity for

work. It is also an acknowledged obligation of Government to secure working and living conditions which are favourable to the worker's physical and moral health and to ensure for him opportunities for the advancement of his status and a full measure of freedom of action consistently with his obligations to industry and society. The pace at which a programme to achieve these ends can be prosecuted will depend upon various factors foremost among them being the co-operation of the working classes and of the employers, the state of the industries concerned and economic conditions generally.

"Government are examining the possibility of devising measures for setting up minimum wage fixing machinery to meet special requirements, for promoting the provision of better housing conditions, for control of house rent in cities and for the relief and avoidance of working class indebtedness. With regard to industries and industrial centres which fail to provide a living wage to the employees, Government have decided to institute exhaustive enquiries with a view to determining how far wages in these cases fall short of the minimum budgetary needs of the workers, to discover what circumstances are responsible for the inadequacy and to ascertain the ways and means of improving wages to a satisfactory level.

"For the protection of the industrial population, Government visualize the development of a comprehensive system of social insurance. . . . Government have under their consideration the feasibility of legislation for leave with pay during periods of sickness. It is hoped that the action taken in this direction would pave the way for a scheme of sickness insurance.

"Government contemplate an immediate extension and improvement of the Factories Act in several directions. Provisions of the Act relating to the weekly holiday, the interval of rest and spreadover of the hours need amendment. Satisfactory dining accommodation and adequate medical aid will be made a legal obligation. The position regarding the maximum hours of work will be reviewed. Government find that some regulation of night-shift work in general will have soon to be considered.

"With regard to trade disputes, Government are determined to pursue an active policy with a view to maintaining industrial peace in the Presidency, endeavouring all the time to see that the workers obtain a fair deal. It is the intention of Government to promote legislation aiming at the prevention of strikes and lockouts as far as possible. The basis of this legislation would be the requirement that no reduction in wages or other change in conditions of employment to the disadvantage of the worker should take effect till they have had sufficient time and opportunity for having the facts and merits of the proposed change examined and all avenues of peaceful settlement of the dispute explored either through the channel of voluntary negotiation, conciliation, or arbitration or by the machinery of the law. A corresponding obligation would rest on the workers in respect of demands on their behalf.

"While Government propose to do all that is practicable for the amelioration of the conditions of the working classes, they are convinced that no legislative programme can be a substitute for the organised strength of the working class and till organisations of workers, run on genuine trade union lines grow up in the various fields of employment, no lasting good can accrue. Government are therefore anxious to assist in removing real hindrances in the way of the growth of labour organisations and to promote collective bargaining between the employers and the employees. Means will be devised to discourage victimization of workers for connection with a labour organisation and participation in legitimate trade union activity.

"In the sphere of realise that the working and that illiteracy in it serious handicap to itself and a grave danger to society. The educational policy of Government will therefore be designed to meet these special requirements. Government's policy of prohibition has also a special bearing on the well-being of the industrial community and it is Government's intention to select important industrial towns for the early application of this policy.

"Government have in mind the need and utility of statistical and other information for the proper discharge of their functions in these and other matters. The Government Labour Office is well equipped for the purpose. are considering the advisability of scope of the work of the Labour facilitating the work of collection of statistics by suitable legislation."

In Bengal, where a popular Ministry was formed with representatives from the Proja, the Muslim League, the Independent Hindu and the Independent Muslim parties, the policy of the Government with regard to labour was contained in a statement made by the Honourable Minister in charge of the Department of Commerce and Labour to representatives of the Press in September 1937. He stated that some of the important items which the Government of Bengal were considering for the amelioration of labour were the establishment of industrial tribunals, employment exchanges, declassification of labour schemes for health insurance, adequate employment in shops, of illegal gratification, enquiries into conditions of living by means of collecting family budgets with a view to ascertaining whether it would be possible to introduce minimum wage fixing machinery and schemes of unemployment insurance. With regard to the policy of the Government of Bengal towards trade unions and the question of their recognition by employers, the Commerce and Labour Minister passed some very cogent and apposite remarks. He said:—

"It has been suggested that my policy of encouraging trade unions and giving recognition to them is merely a subterfuge to destroy the trade unions of the red flag. The question of subterfuge does not arise. I do not consider the so-called trade unions of the red flag to be genuine trade unions at all. I would welcome the flag of the labourers whether it is red, white

or blue so long as it is the flag of a genuine labour movement, but when the red flag is invariably coupled with revolutionary slogans, and by a ferocity and a hatred which is undermining the very foundations of the social structure, when it is almost invariably coupled with incitement to violence either overtly or covertly, it is impossible for me to consider it as the flag of a genuine labour movement until its sponsors enter the field as responsible labour leaders and not as politicians exploiting labour for personal political or revolutionary motives. Hitherto the trade unionism of that flag has been nothing else but the creation of a conglomeration of workers for fighting employers on the basis of class warfare and disseminating class hatred. I wish to make it clear that I will under no

..... give the slightest encouragement or to any communist organisation, with anti-religious campaign and its appeal to hatred, violence and insurrection on a mass scale and I am sure that in this pronouncement I have the support of the vast majority of the thinking public. A trade union that advises lightning strikes or does not formulate its demands or acts in an immoderate manner, or makes obviously extravagant or stupid claims, that makes no attempts to settle disputes, that discards offers of mediation and conciliation, is obviously not a genuine trade union. While therefore encouraging the establishment of sound trade unions and giving them recognition in

with the principles I have outlined list on fair-play on either side. Re- will confer on the unions valuable rights. I will expect the trade unions to act in a responsible manner; if they do not do so, I shall be under the painful necessity of withdrawing recognition. I would expect employers to give the representations of the trade union proper consideration and to do everything in their power to encourage them and save them from destructive forces. If they do not do so, I shall appeal to the legislature for powers and to public opinion for support."

AUGUST 1937 TO AUGUST 1939.

We have during the course of this brief survey of the growth of the Labour Problem in India made an endeavour to mark the outstanding milestones in the development of the growing consciousness of their rights among the toiling masses of the country. This development was never so rapid as that which took place during the two years after the advent of Provincial Autonomy. The Governments of Bombay, Bihar, the Central Provinces and Berar and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment and to make recommendations. In the case of Bombay and the C. P. these enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar, labour in all industries was covered. The Government of Madras, following a prolonged strike of cotton mill workers in Coimbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries in India were, after a fairly prolonged period

of depression, showing signs of revival owing mainly to the Sino-Japanese war. Prices of raw products had fallen during the latter half of 1937. The margins between costs of production and selling prices had widened to the advantage of industry and it was consequently possible for employers to accept the recommendations made by various Committees and Courts of Inquiry and Boards of Conciliation for increases in wages and the improvement of conditions of work. These acceptances were, however, not made entirely by employers of their own free will. In all cases the Governments concerned issued resolutions and notifications accepting such of the recommendations made by the Committees which they concurred in and recommending the adoption of these recommendations by the employers. It was obvious that non-acceptance of the recommendations made would be followed by legislative coercion if necessary.

During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly after a record debate of nearly 150 hours going over 33 days, their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unions of their workers; for the grant of holidays with pay during periods of sickness, and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, hotels, theatres, cinemas, etc. As far as the last is concerned, the Bombay Shops and Commercial Establishments Bill of 1939 was introduced in the Bombay Legislative Assembly by the Hon'ble the Prime Minister on the 17th April 1939 and received support from all sections of the House. This Bill was referred to a Select Committee of the House and was finally passed into law under the title of "The Bombay Shops and Establishments Act, 1939," on the 31st October 1939. Legislative proposals for the establishment of Employment Exchanges in the more important industrial centres of the Province were also under the consideration of Government.

There was a spate of activity for legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and Bengal enacted legislation during the year 1938 for the payment of maternity benefits and the Sind Legislative Assembly passed an Act in June 1939 to amend the Bombay Maternity Benefit Act, 1929, in its application to the Province of Sind. In the Central Provinces and Berar bills were published (1) for the collection of statistics, (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government; and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. The Government of the United Provinces published, on the 21st October 1939, the draft of a Bill to regulate the hours of employment and certain conditions of employment in shops and commercial establishments. A similar Bill has been referred to a Select Committee of the Legislative Assembly in Sind. The Government of Assam have drafted a Bill for the freedom of move-

ment of tea garden labourers in that Province. The Government of the United Provinces introduced a Trade Disputes Bill in the local Legislative Assembly but withdrew it later on with a view to the introduction of a fresh Bill on the lines of the Bombay Industrial Disputes Act, 1938. Private members' Bills introduced in the different Provincial Legislative Assemblies during the period immediately under review covered minimum wage fixing machinery and further regulation of conditions in unregulated factories in the Central Provinces and for the compulsory recognition by employers of unions of their workers in Bombay, Madras and in the United Provinces. As far as Madras is concerned, the Minister for Labour was successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which had been registered under the Indian Trade Unions Act. It is clearly impossible for us even to attempt to give brief summaries of all these various pieces of enacted or proposed Labour legislation but in view of their importance as models on which further legislation is likely to be passed, we shall give below brief descriptive notes of the Bombay Industrial Disputes Act, 1938, and of the Bombay Shops and Establishments Act, 1939.

It is of interest to observe that no piece of legislation enacted in India has had a more stormy passage through the Legislature than that which was witnessed in the Bombay Legislative Assembly during the discussion of The Bombay Industrial Disputes Act, 1938. The Labour Members on the Opposition Benches opposed the measure tooth and nail. The main ground on which this opposition was based was that a popular Congress Government sought to deprive the workers of their fundamental right to strike. Several members on the Government Benches repeatedly asserted that this was not the intention of the Bill, that the right to strike was not being taken away and that all the Bill intended to do was to postpone or defer the right to strike until such time as all the avenues provided for in the Bill to bring about an amicable settlement of a dispute had been exhausted. The representatives of Labour both in and outside the Assembly made every effort to misrepresent the intentions of Government to the workers. Mass meetings were held in Bombay, Sholapur and other centres to oppose the measure, and when these failed to move Government, the Bombay Provincial Trade Union Congress and the Independent Labour Party decided to organise a one-day protest strike in all industries in all centres in the Province on the 7th November 1938.

In spite of very elaborate preparations, the strike was a complete failure in all centres except Bombay and Sholapur. In Bombay city only 54,000 out of a total of 1,16,000 day shift workers in cotton textile mills did not turn up for work in the morning. The promoters of the strike thereupon resorted to mass intimidation, to stone throwing, to the stopping of vehicular traffic, to attempting forcible closure of retail shops and to rowdy demonstrations. As the day wore on, mob rule prevailed in various parts of the city and a few loyal women workers were even stripped of their clothing in open streets. The

police had to resort to firing on two occasions, and some persons were injured. The Government of Bombay decided that a full enquiry should be held by a Committee into all the facts relating to the said disturbances and the precautionary measures and the action taken by the authorities. Government accordingly appointed a Committee consisting of the Hon'ble Mr. Justice H. J. Kania as Chairman and Messrs V.F. Taraporewala and M. C. Chagla, Barristers-at-Law as Members and Mr. H. K. Chainani, I.C.S., Deputy Secretary, Legal Department, as Secretary. The Committee published their Report early in February 1939. The report is an illuminating document illustrative of the mob passions that can be excited by irresponsible labour leaders.

Responsible spokes-men of industrial interests in the country have given expression from time to time, to their sense of perturbation at the lack of uniformity and consistency in the labour policies which were being pursued by Provincial Governments. It had become increasingly apparent, since the introduction of Provincial Autonomy, that the impetus towards enacting measures to improve the lot of the working classes differed in intensity from one province to another and that there were wide gaps between labour amenities in different parts of India. These disparities, it was recognised, must inevitably tend to weaken the competing power of the more advanced provinces, especially when they are, in addition, faced with increased Central and Provincial taxation. The Government of India took due notice of these apprehensions and arranged to convene a Conference of Labour Ministers to discuss various questions connected with Labour Legislation in India, both Central and Provincial, in November 1939. Owing, however, to the resignation of the Congress Ministries in many Provinces in that month the proposed Conference was postponed to January 1940. We deal with this Conference in a separate note lower down.

Notwithstanding the extensive reforms which had been carried out both by the Central and the Provincial Legislatures in India during the period 1923 to 1939, a rate discontent was becoming increasingly manifest in most industrial centres. Strikes continued to be frequent, most of them short and sporadic, but some bitter and prolonged. The All-India Statistics of Industrial Disputes for the years 1937 and 1938 show that as against an annual average of 147 strikes during the thirteen years between 1924 and 1936, the number of strikes during these two years amounted to 379 and 399 respectively—the last being the highest since these statistics began to be compiled. The number of workers affected by these strikes was 6,47,801 in 1937 as against 1,14,217 in 1935. The next highest figure is 6,00,351 for 1921. Working days lost amounted to 8.98 millions in 1937 and 9.20 millions in 1938 as compared with less than a million in 1935. In both these years the principal scenes of industrial conflict in India were staged in the jute industry in Bengal and in the cotton textile industry in Calcutta. It is of interest, however, to observe that the Province of Bombay, with the exception of Gokak, was singularly free from large scale industrial disputes during the five years 1935

to 1939 and that there was not a single strike in any of the cotton textile mills in Amedabad during the whole of the year 1938. The statistics given prove conclusively that the problem of industrial relations is the chief problem confronting Indian Industry and that further industrial development in India must depend upon a proper solution of it. In this connection it is of interest to observe that a Conference of the Prime Ministers of all the Provinces in India which was held in Poona in August 1939 decided on uniformity in Trade Disputes legislation and on the establishment of Industrial Courts in all the Provinces. Employers in Bengal have been awakened to a realisation of this and at a meeting of the Calcutta members of the Employers' Federation of India held in August 1938 it was decided to form an Eastern India Committee for the purpose "of giving continuous consideration to the improvement of the well being and the efficiency of the workers in the establishments controlled by its members."

Among the more important events that occurred in the field of Indian Labour during the two years June 1937 to August 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in an exceedingly well written and interesting report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29, which should be read by everybody interested in Labour.

A Committee composed of trade union representatives, both inside and outside Parliament with Mr. John Jagger, M.P., as Chairman and Messrs C. C. Poole and Krishna Menon as Joint Secretaries, was established in London in June 1939 with the object of furthering the interests of Indian Labour both in India and elsewhere.

EMPLOYMENT OF CHILDREN'S ACT, 1938.

The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their thirteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable. By an Amending Act passed in 1939 the employment of any child who has not completed his twelfth year is prohibited in any workshop connected with *bidi* making; carpet weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fireworks; mica-cutting and splitting; shellac manufacture, tanning and wool cleaning. The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or

recognition from a Provincial Government. Provincial Governments are empowered by the Amending Act to add any description or process to the industries already scheduled in which the employment of children under twelve years of age should be prohibited.

BOMBAY INDUSTRIAL DISPUTES ACT, 1938.

This Act is perhaps the most advanced and outstanding piece of Labour legislation ever attempted in India. Put in a nutshell, the object of the Act is to make all strikes and lock-outs illegal until such time as the procedure provided for in the Act for conciliation and arbitration is exhausted. All industrial matters relating to wages; conditions of employment; privileges, rights or duties of employers or employees, or the mode, terms and conditions of employment or non-employment are divided into two schedules. All matters which regulate the relations between employers and employees such as rules of conduct or standing orders for operatives are listed under Schedule I. Matters connected with wages, hours of work and conditions of employment are listed under Schedule II. Government have power to modify these schedules (Section 72).

Standing Orders: Every employer in an industry to which the Act is made applicable is required to submit, within a period of two months from the date of the application of the Act to that industry, a draft of the Standing Orders which he proposes to adopt for governing the relations between him and his employees. The Commissioner of Labour is to "settle" these Standing Orders after consulting all the interests concerned in the industry. Any person aggrieved by any of the Standing Orders so "settled" has the right of appeal to the Industrial Court (Sections 26 & 27).

Changes: No employer is to be permitted to make any change in any of the Standing Orders settled by the Commissioner of Labour or by the Industrial Court on appeal or in respect of any industrial matter included under Schedule II unless notice of such intended change is given to the representative of employees. Any employee who desires a change in any industrial matter is also required to give notice of such intended change to his employer. Copies of all such notices are required to be forwarded to the Commissioner of Labour, the Chief Conciliator, the Registrar, the Labour Officer and to any other person as may be prescribed (Section 28).

Representatives of Employees:—The Act contemplates the creation of three distinct types of unions. In the first place no union which has not been registered under the Indian Trade Unions Act, 1926, will have any place in the scheme of things under this Act. Unions may be either *occupational unions* or *industrial unions*. Any union which has a membership of five per cent. of the total number employed in any occupation or industry in any local area and which has been recognised by the employers concerned or any union which has not been so recognised but which has a membership of twenty-five per cent. of the total number employed may apply for registration for the purposes of the Act (Sections 7 & 8). Any registered union which has a membership of twenty-five

per cent. of the total number employed in the occupation or industry concerned may apply to the Registrar for declaration as a *representative union*. (Section 12). Unions which have a membership of five per cent. or more but less than twenty-five per cent. and which have not been recognised by the employers concerned may apply to the Registrar for being declared as *qualified unions*. (Section 11.) The three types of unions, therefore, are: (1) Registered Unions; (2) Representative Unions; and (3) Qualified Unions. "Representative of Employees" means (i) where the majority of employees directly affected by a change are members of a registered union, such registered union; or (ii) where some of the employees directly affected by the change belong to a representative union, that representative union; or (iii) in other cases such representatives not being more than five as may be elected in the manner prescribed by employees directly affected by the change from among themselves; or (iv) in cases where representatives are not elected under (iii) and in all other cases not falling under any of these clauses, the Labour Officer. (Section 3(29)). The Rules made under the Act make provision for the determination of the union which is a representative of employees; and, failing unions, for the election of the workers' own representatives.

Preliminary Procedure:—On the receipt of a notice of change, the employer and the representative of the employees concerned are to discuss the proposed change. A period of fifteen days has been allowed for these discussions. If an agreement is reached between the parties, the memorandum of such agreement is to be sent to the Registrar for registration (Section 30). In cases where the Labour Officer is one of the parties, the Labour Officer is required to put the terms of the proposed agreement before a meeting of the employees concerned and he is empowered to enter into an agreement only if the majority of such employees concur (Section 32).

When dispute deemed to commence:—If the preliminary proceedings fail to produce an agreement, the party giving the notice is required, if he still desires that the proposed change should be effected, to send a full statement of the case to the Conciliator, the Chief Conciliator and the Registrar (Section 34). On receipt of the statement of the case, the Conciliator is required to enter the industrial dispute in a register (Section 35).

Conciliation:—The Act makes provision for the appointment of Conciliators and Special Conciliators. The Commissioner of Labour is to be the ex-officio Chief Conciliator for the purposes of the Act. (Section 21.) Provision has also been made for the appointment of Boards of Conciliation consisting of independent chairmen and members representing employers and employees to be selected by Government from panels formed for the purpose (Section 23). On making an entry of an industrial dispute, the Conciliator concerned has to try and bring about a settlement of the dispute (section 36) but power is reserved to the Chief Conciliator to intervene at any stage in any conciliation proceedings held by another Conciliator (Section 37). The Chief Conciliator or the Conciliator

as to send a report of the whole case to Government on the conclusion of the conciliation proceedings, and in all cases where agreements are reached copies of the agreements are to be forwarded to the Registrar. (Section 38.) During the pendency of any proceedings before the Conciliator the Government may, and if both the parties agree either prior to the commencement of such proceedings or after the failure of the Conciliator to bring about a settlement shall, refer the dispute to a Board of Conciliation. (Section 39.) Government is empowered to lay down time limits for different stages of conciliation proceedings (Section 41) and the Act gives various powers to Conciliators and to Boards for summoning of witnesses, production of documents, etc. (Section 40.)

Industrial Court:—The Act makes provision for the appointment of an Industrial Court for determining industrial disputes and for dealing with other matters under the provisions of the Act. The Court is to consist of two or more members to be selected from persons who are, have been or are eligible, for being appointed as Judges of a High Court. (Section 24.) The Government of Bombay have appointed the Hon'ble Mr. Justice H. V. Divatia as the President of the Industrial Court and the District Judges of Ahmedabad (Mr. G. S. Rajadhyaksha I.C.S.) and Sholapur (Mr. B. K. Dalvi) as Members. The Industrial Court, *inter alia*, is to decide all matters referred to it under Chapter II of the Act connected with the registration of unions and it has also to decide appeals from decisions of the Commissioner of Labour in connection with the Standing orders (Section 53).

Arbitration:—Any employer and a registered union may by a written agreement (called a submission) agree to submit any present or future industrial dispute or any classes of such disputes to arbitration of any person whether such arbitrator is named in the agreement or not or to the Industrial Court. All submissions are to be registered with the Registrar. (Section 43.) In the absence of an agreement to the contrary, submissions are irrevocable but are terminable by giving six months' notice. (Section 44.) The conciliation proceedings provided for under the Act are barred in cases where the representative of employees is a registered union which is a party to a submission. (Section 46.) The Act contains various provisions with regard to the duties of the Industrial Court, procedure before the Court, execution of orders as to costs and the parties on whom orders or awards of the Industrial Court will be binding.

Illegal strikes and lock-outs:—A strike or a lock-out will be illegal if it is declared, commenced or continued (a) in cases where it relates to any industrial matter mentioned in Schedule I before the Standing Orders relating to such matter and submitted to the Commissioner of Labour are settled by him or by the Industrial Court, as the case may be, or before the expiry of six months from the date on which such Standing Orders come into operation; (b) without giving notice in accordance with the provisions of Section 28; (c) only for the reason that the employer has not carried out the provisions of any Standing Order or has made an illegal change; (d) in cases where notice of change has been given and where no agreement in regard

to such change is arrived at before the statement of the case is received by the Registrar; (e) in cases where conciliation proceedings in regard to the industrial dispute to which the strike relates have commenced, before the completion of such proceedings; (f) in cases where a submission is registered until such submission is lawfully revoked; or in contravention of the terms of a registered agreement, settlement or award. In cases where conciliation proceedings in regard to any industrial dispute have been completed, a strike or lock-out relating to such dispute will be illegal if it is commenced at any time after the expiry of two months after the completion of such proceedings. (Sections 62 & 63.) The determination of the question of whether any strike or lock-out is illegal rests with the Industrial Court.

Illegal Changes:—No employer can make any change in any industrial matter in regard to which a standing order has been settled under Section 26 or which is mentioned in Schedule II before a notice in respect of such change has been given and the procedure laid down under the Act has been gone through. No employer can also make any change in contravention of the terms of a registered agreement, a settlement or an award. Any change made in contravention of these provisions will be illegal. Applications for the declaration of any changes as illegal are to be made to the Industrial Court. (Section 73).

Penalties:—Various penalties are provided for breaches of the Act (Sections 65 & 66) and for instigating or inciting others to take part in an illegal strike or lock-out. (Section 67.) Penalties are also provided for the making of illegal changes. (Section 69); for disclosing confidential information (Section 68); for obstructing persons from carrying out duties imposed by the Act (Section 70); and for victimisation of employees for trade union activities or for participating in any of the proceedings under the Act (Section 64).

Miscellaneous:—Important provisions of a miscellaneous character relate to the binding character of and the periods for which agreements are to remain in force (Sections 76 and 77), jurisdiction of Courts (Section 79), etc. In cases in which a representative union is a party to any agreement, settlement, submission or award, the Provincial Government is empowered, after consulting the Industrial Court if it deems it necessary to do so, to extend the agreement, etc., to all employees in the industry concerned [Section 76 (2)].

Officers and Areas:—In addition to the Conciliators and the Industrial Court, the Act makes provision for the appointment of a Registrar of Unions for the whole Province (Section 4) and for the appointment of Labour Officers (Section 22). The powers and duties of the Labour Officer are defined in Section 25. "Local area" means any area notified as such by the Local Government.

Application of the Act.—The Government of Bombay decided to apply the Act, in the first instance, to the Cotton Textile Industry in the whole of the Province of Bombay. It was applied to this industry in three stages: (1) Those parts of the Act relating to the settlement of the Standing Orders and the appointment of the

various administrative officers were brought into operation with effect from 1st June 1939: (2) The sections relating to conciliation and arbitration were applied from 1st August 1939; and (3) The provisions relating to illegal strikes and lockouts and the penalties connected therewith were brought into operation from 20th August 1939. The term "cotton textile industry" was so defined as to include all factories notified under section 2 (j) of the Indian Factories Act, 1934, which are engaged in cotton spinning, cotton weaving with or without an admixture of silk, rayon or artificial silk, cotton knitting and hosiery, and all cotton dyeing, bleaching and printing departments, and mechanics' shops attached to such concerns. Every town and village in the Province of Bombay which has one or more cotton textile units according to the definition given has been declared as a "Local Area." The whole of the Act was applied to the Silk Textile Industry in the local area of Bombay City with effect from 1st October 1939 and to the Woollen Textile Industry in the local areas of Bombay and Thana with effect from 15th January 1940. Mr. N. A. Mehran, M.B.E., F.S.S., Assistant Commissioner of Labour, Government of Bombay, was appointed as the first Registrar of Unions under the Act. Mr. A. S. Iyengar, Assistant Commissioner of Labour at Ahmedabad, was appointed Conciliator for the local areas of Ahmedabad, Viramgam, Nadiad, Broach, Surat and Gohna and Messrs. S. R. Deshpande, M.B.E., and S. V. Joshi, Assistant Commissioners of Labour, were appointed Conciliators for Bombay City and the remaining 17 local areas in the Province. Mr. M. P. Lalbouchardiere, I.P., is the Labour Officer for Bombay City. Mr. A. S. Banavalikar with his headquarters at Ahmedabad is the Labour Officer for the local areas of Ahmedabad, Viramgam, Nadiad, Broach, Surat and Gohna; Mr. M. S. Warty with his headquarters at Jalgaon is the Labour Officer for the local areas of Jalgaon, Chalisgaon, Dhuha, Amaher and Malegaon; and Mr. S. S. Rege with his headquarters at Sholapur is the Labour Officer for the local areas of Sholapur, Poona, Belgaum, Hubli, Gokak, Gadag, Barsi, Karad and Tikekarwadi.

Repeal:—The Bombay Trade Disputes Conciliation Act, 1934, was repealed with effect from the 1st August 1939.

THE BOMBAY SHOPS AND ESTABLISHMENT ACT, 1939.

A Bill to make provision for the regulation of hours of work in shops, commercial establishments, restaurants, theatres and other establishments and for certain other purposes was introduced in the Bombay Legislative Assembly on the 17th April, 1939, and received support from all sections of the House. It was referred to a Select Committee and was finally passed into an Act on the 30th October 1939. That legislation of this kind is necessary was shown by the results of an inquiry conducted by the Labour Office of the Government of Bombay in 1938 into the wages, hours of work and conditions of employment in the retail trade of some towns in the Province of Bombay. This inquiry showed that in Bombay city, employees in retail shops and restaurants had, on an average, to work for more than 12 hours a day, with very little provision for

holidays or rest intervals. Nearly 65 per cent. of the 10,212 employees covered by the inquiry had to work for 11 hours or more, over 13 per cent. having to work not less than 15 hours a day. The object of this Act was to put an end to this state of affairs, while not overlooking the requirements of commerce and the consumer.

The Act deals with three main types of establishments: shops; commercial establishments; and restaurants, eating houses, theatres and other places of amusement or entertainment.

As far as shops are concerned, Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. This is half an hour longer than the ordinary factory day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five hours in any day unless he has had an interval of rest for at least half an hour. The Act makes it compulsory that every shop shall be closed not later than 9 p.m., provided, however, that any customer who was being served or was waiting to be served at 9 p.m. at any shop may be served in such shop during the quarter of an hour immediately following such hour. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists and druggists' shops, etc. In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on after 9 p.m. in or adjacent to a street or public place the sale of any goods. This will not, however, apply to the sale of newspapers. The maximum spread-over has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision has been made for the extension of the spread-over to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

As far as commercial establishments are concerned, there are days in a week or a month or a quarter, when longer hours are worked than usual, and the same applies to the various exchanges where settlement days often give rise to abnormal working hours. It was, therefore, considered that it would not be advisable to fix the daily limit of hours in the case of such establishments and the Act, therefore, provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops, but in commercial establishments over time to the extent of 120 hours per year will be permitted so as to enable banks and other large establishments to deal with the pressure of work involved in the preparation of balance sheets, stock-taking, etc. The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are to be so arranged that they shall not together be spread over more than 12 hours in a day. The Provincial Government is, however, empowered to grant exemptions from this

requirement for not more than six days in every calendar year for each person who may be required to work on account of stock-taking, making of accounts, settlements or on other prescribed occasions.

In the case of restaurants, eating houses, theatres and similar establishments, a ten hour day has been prescribed with a spread-over of 14 hours. These establishments have necessarily to keep open for long hours, but the intensity of the trade done varies and the spread-over of 14 hours will give the employers an opportunity of regulating the hours of work of their employees in accordance with the requirements of the trade. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But no child who has not completed his twelfth year will be allowed to work at all in the establishments covered by the Act. The hours of work in the case of young persons between the ages of thirteen and seventeen years will be restricted to 42 per week and to 8 per day and no young person will be permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning. All overtime work is to be paid for at the rate of a time and a quarter. Enforcement of the Act will be in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act will be liable, on conviction, to a fine which may extend to Rs. 25 for the first offence and upto Rs. 250 for every subsequent offence.

The Act in the first instance has been made applicable to the City of Bombay, the Ahmedabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment and the Sholapur and Hubli Municipal Boroughs. At the moment we went to Press, the Government of Bombay were considering the replies received from interested bodies and persons on the Draft Rules made under the Act which were published in the issue of the *Bombay Government Gazette* dated 23rd April 1940. It is expected that the Act will be brought into operation before the end of the year 1940.

The Punjab Trade Employees' Bill which was published in the *Punjab Government Gazette* dated 7th August 1939 goes even beyond the Bombay Act in many respects. Its principal features are: (1) Employment of children under 14 to be prohibited in all the establishments to be covered by the Act; (2) Maximum hours of work to be 60 per week and 11 per day; (3) All shops and commercial houses with a few exceptions to be closed on Sundays and public holidays; (4) Wages to be paid for holidays if an employee has continuous service for a period of 15 days or more; (5) All employees with one year's continuous service to be entitled to leave for fourteen days with full pay; and (6) Fines not to exceed three pias in the case of earnings in any one month and all collections from fines to go to a Welfare Fund.

BOMBAY TEXTILE LABOUR INQUIRY COMMITTEE.

In October 1937, the Government of Bombay appointed a Committee with Mr. Jairamdas Boudlatram as Chairman to investigate into the question of the adequacy of wages and kindred matters in connexion with the textile industry in the Province of Bombay. The other members of the Committee were Messrs. Vaikunth L. Mehta, D. R. Gadgil and S. A. Brelvi. Messrs. Sakarlal Balabhai, M.L.A. and S. D. Saklatvala, M.L.A., representing the employers' interests and Messrs. Khandubhai K. Desai, M.L.A. and R. A. Khedgkar, M.L.A., representing the workers' interests were appointed Associate Members of the Committee to assist them in the proper presentation of the cases of their respective sides but with no power to partake in the final deliberations or to vote with regard to the decisions or recommendations which the Committee might make. Mr. S. R. Deshpande, B.Litt. (Oxon.), M.B.E., was appointed Secretary. The terms of reference which the Committee were asked to consider were as follows:—

- (1) To examine the wages paid to workers having regard to the hours, efficiency and conditions of work in the various centres of the textile industry in the Province and to enquire, in this regard, into the adequacy or inadequacy of the wages earned in relation to a living wage standard and, if they are found in any occupation, centre or unit of the industry to be inadequate, to enquire into and report upon the reasons therefor, and to make recommendations regarding:—
 - (a) the establishment of a minimum wage;
 - (b) the measures which the employers, the employees and the Government should take to improve the wage level;
 - (c) the remuneration of workers engaged on night-shift, and the regulation of night-shift work;
 - (d) standardisation of wages and musters; and
 - (e) the methods of automatic adjustment of wages in future.
- (2) To report whether in view of the present condition of the industry an immediate increase in wages can be given in any occupation, centre or unit of the industry, pending the conclusion of its Report and to make recommendations in this behalf.
- (3) To report on any matters germane to the above.

In accordance with para (2) of the terms of reference the Committee published an interim report in February 1938. After making a careful survey of existing conditions in the cotton textile mills in the Cities of Bombay, Ahmedabad and Sholapur, especially with regard to the prices of raw cotton and the manufactured article, the Committee reached the conclusion that the depression which had been adduced as the principal justification for the wage cuts which had been effected in the textile mills in the Province of Bombay mainly during the years 1933 and 1934 had lifted and that the capacity of the industry to earn profits was distinctly better

than it was when the cuts were imposed. They were of the opinion, therefore, that it was not inappropriate for labour to entertain the hope of being able to participate in the relative prosperity which the industry now enjoyed. It was because of the reassuring position of the industry that the Committee held that the cotton textile industry could well face the future in a

spirit of confidence and that it could meet, out of the substantial betterment that had already accrued and which would continue to accrue for the greater part of the year 1938, additional charges of a reasonable magnitude for raising the wage level. They accordingly recommended that the increases set out in the following schedule should be given:—

SCHEDULE.

Category of earnings.	Rate of increase.	REMARKS.
1	2	3
Below Rs. 13-8-0	3 Annas in the Rupee ..	Provided that no person falling in this category shall receive more than Rs. 15-8 as a result of the increase.
Rs. 13-8-0 and below Rs. 25 ..	2½ Annas in the Rupee ..	Provided that no person falling in this category shall receive more than Rs. 28 as a result of the increase.
Rs. 25 and below Rs. 35 ..	2 Annas in the Rupee ..	Provided that no person falling in this category shall receive more than Rs. 39-4 as a result of the increase.
Rs. 35 and below Rs. 40 ..	1½ Annas in the Rupee ..	Provided that no person falling in this category shall receive more than Rs. 43 as a result of the increase.
Rs. 40 and below Rs. 75 ..	1 Anna in the Rupee ..	Provided that no person falling in this category shall receive an increase in earnings of less than Rs. 3.
Rs. 75 and over	NIL

(1) The basis on which the increase will be calculated shall be the net earnings of each individual worker for each pay-period.

(2) (a) In the case of time workers, the rate of increase for an individual worker in any occupation is indicated by the rate shown in the Schedule against the category of earnings within which may fall the wages to which a worker in that occupation working for the full pay-period is entitled.

(b) In the case of piece workers, the rate of increase to which an individual worker will be entitled is indicated in the Schedule by the rate shown against the category of earnings within which may fall his net earnings during the pay-period.

(3) The earnings shown in the Schedule above relate to a pay-period of 26 working days.

(4) In pay-periods containing less or more than 26 working days, the categories of earnings shown in the Schedule should be adjusted in the proportion which the number of working days in the pay-period bears to 26. The maximum and the minimum limits shown in column 3 of the Schedule should also be adjusted in the same proportion.

(5) These recommendations apply to the entire body of workers (as defined in the Indian Factories Act but excluding all persons employed in a clerical capacity) employed in the cotton textile industry in the Bombay Province.

The Committee calculated that, on the basis of the figures given in the above Schedule, the percentage increase in the wages bill would amount to 9.0 for Ahmedabad, 11.9 for Bombay and 14.3 for Sholapur. It was calculated that

the Committee's interim recommendations would increase the wages bill of all cotton textile mill workers in the Province of Bombay by about a crore of rupees per annum. In recommending the above increases, the Committee had taken into consideration one contingent factor which was brought to their notice by Government, viz., the provision that might have to be made for paying sickness benefits to workers as a result of social legislation which Government proposed shortly to undertake. The Government of Bombay published the interim report with a resolution which stated that the conclusions and recommendations of the Committee, in the view of Government, were entitled to the weight and authority which should be attached to the award of an Industrial Court or a Court of Arbitration; and as such should be carried out and accepted both by employers and labour. Government further recommended that the increases in wages suggested by the Committee should be given commencing from the date of the disbursement of the wages due for the month of February 1938 or for the last pay period in that month. Except for a few small concerns, all cotton textile mills in the Province accepted the Committee's interim findings and gave their workers the increases in wages recommended by them.

The Committee dispersed in February 1938 after submitting their Interim Report to Government. Owing to ill health, Mr. Jairamdas Dhanatram, Chairman of the Committee resigned in the month of June and the Government of Bombay appointed The Honourable Mr. Justice H. V. Divatia, a Puisne Judge of the Bombay High Court, Chairman of the Committee in the month of September. Mr. N. A. Mehrian, M.B.E., F.S.S., Assistant Commissioner of Labour

succeeded Mr. S. R. Deshpande as Secretary to the Committee when the latter went on leave in December 1938. The reconstituted Committee under the Chairmanship of Mr. Justice Divatia commenced its public sittings in Bombay, on the 7th December with an extensive examination of the representatives of various employers' and workers' organizations, Government officers, economists, nutrition specialists, welfare bodies, representative workers, etc. The Committee recorded evidence in Bombay and Ahmedabad and, in addition to inspecting many cotton mills in these two centres, visited every cotton textile mill and factory in each of fifteen other centres visited by it. Representative cotton mill workers were examined at each of the centres visited. It also spent some time in visiting many large factories in other industries, welfare institutions, offices of trade unions and institutions directly connected with the cotton textile industry and the labour employed in it. Between May and December 1939, the Committee was mainly engaged in a series of confidential discussions with various Millowners' Associations and representative unions of workers in connection with the several schemes of standardization of wages submitted to it for consideration and with the Associate Members who submitted their respective cases on the many questions which the Committee was appointed to inquire into. We understand that the Committee submitted its Report to Government in July 1940.

THE CAWNPORE LABOUR INQUIRY COMMITTEE.

Few cities in India have expanded industrially so rapidly as Cawnpore. In 1901 its population was 172,694. In 1931 this had increased by over a quarter to 219,819. Today it is variously estimated at being somewhere between 285 to 310 thousand. Besides having a large number of cotton spinning and weaving mills, Cawnpore is also an important centre of the tanning industry and it has a large number of engineering and other factories as well. The total factory population of the city in 1937 was over 75,000. Since the advent of the Reforms, Cawnpore has been a storm centre of conflict between capital and labour. When Congress took up the reins of Government in July 1937 industrial strife culminated in a complete stoppage of work in almost all cotton textile mills and several units in many other industries were also affected. The main demands centred round an immediate and an all-round increase in wages. Several deputations representing the interests of both the employers and the workers waited on the Hon'ble the Prime Minister, Pandit Govind Ballabh Pant and as a result of his eventual intervention in the dispute an agreement was concluded between the parties in the month of August 1937 by virtue of one of the terms of which Government agreed to appoint a Committee to examine and report on the conditions of life and work of labourers employed in factories in Cawnpore. The Committee as originally appointed in November 1937 consisted of Sriyut Rajendra Prasad Sahab (Chairman) and Sir Tracy Gavin Jones, Mr. Haribar Nath Shastri

Mr. Gulzarilal Nanda and Professor S. K. Rudra. Sir Tracy Gavin Jones and Mr. Shastri who represented the employers' and the workers' interests respectively mutually agreed to withdraw from the Committee in December. The services of Mr. Gulzarilal Nanda could not be spared by the Government of Bombay and Mr. B. Shiva Rao was appointed in his place on the 13th January 1938.

The terms of reference to the Committee ranged over a very wide field and covered questions connected with wages, night shift working, rationalization, recruitment and supervision of labour, leave and holidays, housing and welfare, the collection of labour statistics, etc. The Committee submitted their report to the U. P. Government early in April 1938. Government released the report for publication towards the end of that month with a Press Note expressing the hope that the suggestions and recommendations made by the Committee would lead to an amicable settlement of the pending differences between employers and workers, failing which Government would proceed to take the report into consideration and reach their own decisions. It was also announced that all representations in the matter should be submitted to Government by the 10th May. The report covers a very wide field of subjects and includes a host of recommendations among the more important of which are the following:—

(1) Wage increases estimated to increase the wages bill by 10 to 12 per cent. The method to be followed in giving the increases was the same as that recommended by the Bombay Committee, viz., to divide the workers into different wage groups and to increase their monthly earnings on a sliding scale which ranged from 2½ annas in the rupee for those earning between Rs. 13 and Rs. 19 per mensem to half an anna in the rupee in the case of workers getting between Rs. 40 and Rs. 50.

(2) Consolidation of bonuses with wages.

(3) The establishment of a wage fixation board to function on the lines of the British Trade Boards for the adjustment of wages from time to time.

(4) A minimum wage of Rs. 15 per month of 26 working days.

(5) Standardisation of wages in cotton textile mills.

(6) The adoption of two straight shifts and the abolition of overlapping and multiple shifts.

(7) Complete dissociation of jobbers in connexion with recruitment.

(8) Abolition of methods of punishments such as suspension, the fixing of different piece rates for different qualities of production, etc.

(9) The payment to discharged workers of compensation either at the rate of 15 days' wages for every year of service or a lump amount not exceeding six months' wages.

(10) Fifteen days leave with full pay for workers with not less than two years' continuous service to their credit, and, in addition, 15 days' sick leave with half pay and 60 holidays per year.

(11) Establishment of a welfare council and organisation of maternity and child welfare.

(12) Provision of a sickness insurance scheme on a contributory basis.

(13) Provision of contributory Provident Fund schemes on the basis of equal contributions of half an anna in the rupee of earnings for both employers and workers; and

(14) The creation of a Labour Office on the lines of the Bombay Labour Office.

The Committee estimated that the financial effect of the various recommendations and suggestions which they made, if accepted *in toto*, would be to raise the wages bill by about 21 per cent. per annum.

The Employers' Association of Northern India in the course of a lengthy statement which they submitted to Government and which they also released to the Press about the middle of May 1938 stated that the recommendations of the Committee were unacceptable to employers in Cawnpore because their findings were based, firstly on various inaccuracies and discrepancies, and, secondly, were heavily biased in favour of the workers. They stated that the recommendations were based on many wrong facts. They stated that the recommendations were accepted, the city of Cawnpore would be saddled with a dead loss of over three lakhs of rupees per annum and that it would have to close down forthwith. The workers' representatives and unions on the other hand stated that the Committee's recommendations fell far short of the workers' demands but that their acceptance *in toto* by the employers would be the minimum acceptable.

As soon as the statement of the Employers' Association was published, 25,000 workers in textile mills in Cawnpore downed tools and by the beginning of June 1938, over 40,000 workers in both textile and other factories were affected by the strike. The Government of the United Provinces were faced with a very critical situation and they appointed Mr. P. M. Kharezhat, C.I.E., I.C.S., as Commissioner of Labour in addition to his own duties as Secretary to Government in the Department of Industries. Various conferences were held between the Hon. The Prime Minister of the U.P. and the Commissioner of Labour on the one hand and the representatives of the employers and the workers on the other and it was only after the strike had lasted for fifty days that an agreement was reached which was accepted by both sides. The Government of the United Provinces issued a special communique on the 6th July 1938 embodying the terms of the agreement and giving their own views on the different points contained therein. The following are some of the more important matters on which agreement was reached:—

(1) The constitution of a wage fixation Board with an equal number of representatives of employers and workers with an independent Chairman to be selected by mutual consent failing which Government to appoint a Chairman from the ranks of Judges of the High Court or Senior District Judges. The Board would deal only with wage disputes of a general character and matters concerning individual Mills were to be dealt with by the Labour Commissioner.

(2) Schemes of standardisation of wages and Rationalisation to be facilitated.

(3) Government to set up a Labour Exchange.

(4) The Labour Commissioner to be the final authority in the matter of disputes.

(5) Government accepted the view of the employers that as regards social benefits such as leave with pay, sickness insurance, provident funds, etc., these were matters of a general character affecting all industries and should not be effected on a Provincial basis as all-India considerations were involved.

(6) The Mazdoor Sabha to be reconstituted on a sound basis with the assistance of the Labour Commissioner, that it should foster discipline in the Mills and be fully competent to prevent any strike being declared except after due deliberation and with the full consent of the workmen.

(7) Standardisation of conditions of employment and fifteen days' notice to be given of any proposed change.

(8) Acceptance by the workers of the increases in wages offered by the individual mills.

THE CENTRAL PROVINCES TEXTILE LABOUR INQUIRY COMMITTEE.

Following the example of Bombay and the United Provinces, the Government of the Central Provinces and Berar also appointed a Committee in February 1938 to examine and report on the wages question of the workers in the cotton textile mills in that Province. The terms of reference of the C.P. and Berar Committee were, however, restricted to an examination of the interim report of the Bombay Textile Labour Inquiry Committee with a view to reporting on (1) the extent to which the conditions in the cotton mills in the Central Provinces and Berar differed from those which formed the basis of the Bombay Committee's recommendations; (2) the changes that would, as a consequence, be necessary in these recommendations in their application to conditions in the Central Provinces; and (3) the date from which the modified recommendations should take effect. The Committee was composed of Mr. N. J. Roughton, I.C.S. (Financial Commissioner), as Chairman and Messrs. A. C. Seu Gupta (Principal, Morris College, Nagpur), V. R. Kalappa, M.L.A. and C. C. Desai, I.C.S. (Director of Industries), who was also to be Secretary to the Committee. The Committee was to be advised on technical matters by Mr. S. H. Bathwala, Manager of the Empress Mills, Nagpur and Mr. R. S. Ruikar, General Secretary, Nagpur Textile Union. The Committee submitted their report to Government at the end of April and the report was published in the middle of May 1938.

The Committee found that the condition of the textile industry in the Central Provinces and Berar was more like that of the mills in Bombay City rather than of either Ahmedabad or Sholapur and the proposals for wage increases should accordingly be based on those adopted for Bombay City. Owing, however, to the lack of uniformity in the wage cuts, the Committee were of the opinion that it would not be equitable to adopt a scheme of graduated rates of increases similar to that recommended by the Bombay Committee. The objection to the Bombay

method, the Committee found, was that it gave an advantage to those mills which succeeded in introducing the largest wage cuts and which were now paying the lowest wages. Conditions in the Central Provinces were not the same as in Bombay in such important matters as the cost of living, the level of wages and efficiency of textile labour and therefore the Bombay schedule could not be adopted bodily for the mills in that Province and would have to be so modified as to suit local conditions. It was for these reasons that, in spite of the attractiveness of the Bombay method in that it gave greater relief to the lower-paid workers, the Committee preferred the system of restoring a fixed percentage of the wage cuts and they accordingly recommended that in all cases where wage cuts had been effected, 60 per cent. of the actual wage cut should be restored; and that, in addition, where new rates had, since the cut of 1933, been adopted for new employees, 60 per cent. of the difference between the new rates and the old rates should be added to the new rates. The Committee recommended that the restoration in the wage cuts proposed should be given with effect from the 1st May 1938. The recommendations of the Committee, with slight modifications made by Government were given effect to by all the mills and accepted by almost all the workers.

THE BIHAR LABOUR INQUIRY COMMITTEE.

Early in March 1938, the Government of Bihar appointed a Committee of Inquiry to enquire into the conditions of labour prevailing in the industrial centres as well as in the industries of the Province with particular reference to each important industry. Mr. Rajendra Prasad, who was also appointed Chairman of the Cawnpore Labour Inquiry Committee, was Chairman of this Committee as well. The other members of the Bihar Committee were Mr. M. P. Gandhi, Professor Abdul Bari, Mr. Jagat Narain Lal De, Mukherjee, Mr. B. B. Chatterjee, and Mr. B. B. Chatterjee.

The Committee had powers to co-opt one or more representatives of capital and labour. Owing to the continued ill health of Mr. Rajendra Prasad, Mr. R. R. Bakhale, a member of the Servants of India Society, Bombay, was appointed Deputy Chairman of the Committee in November 1938. The Committee was further strengthened by the appointment of Mr. G. M. Hayman, as a member. The report of the Bihar Committee is expected to be published by the end of July 1940.

BOMBAY MUNICIPALITY ADOPTS MINIMUM WAGE.

A notable event during the year 1938-39 was a resolution passed by the Standing Committee of the Bombay Municipal Corporation on the 26th January 1938 to pay a minimum salary of Rs. 25 per month exclusive of benefits such as House Rent allowance or the value of free quarters wherever provided to all permanent male Municipal employees from the year 1938-39. It was also resolved that women, boys and men on daily wages should be excluded from the scope of the resolution. In this connection it is of

interest to observe that under the Sugar Factories Control Act which has been passed in the United Provinces, Government have power to prescribe conditions of employment in crushing licenses granted to sugar factories. The Government of the United Provinces issued a communiqué on 22nd January 1940 recommending a minimum daily wage of five annas for labour employed in sugar factories and hoping that they would not have to enforce it under the provisions of the Act.

THE OUTBREAK OF WAR.

Within twenty two years of the signing of the Treaty of Versailles Europe is again in the throes of a War in which most of the Great Powers of Europe are involved, and it has naturally affected the principal industries of India and Indian labour to a great extent. Immediately prior to the outbreak of the War the main Indian industries—especially the Textiles—were beginning to feel the effects of an oncoming slump. Stocks on the hands of the manufacturers were accumulating, night shifts were closing down and the Millowners' Associations of Bombay and Ahmedabad were engaged in a nation-wide campaign to resort to organised short time working. Industrialists all over India were again considering ways and means of reducing costs or production. The outbreak of War however, stemmed the tide. There was a big world wide demand for jute textiles in consequence of the widespread use of sand bags for the protection of public and other buildings against the effects of aerial bombardment. Cotton textiles and especially cotton yarns were finding more expanded markets outside the country. Night shift working was again resorted to in an increasing measure. The engineering and allied trades whose prosperity is closely linked up with that of the textiles began to look up. There was a wide expansion in many other industries consequent on the playing by the Government, or large orders for war

The employment situation improved and manufacturing costs began to soar up as a result of the increase in the prices of all products and commodities. One of the immediate effects of the outbreak of War was the simultaneous outbreak of rampant profiteering. The measures adopted by the Central and the Provincial Governments for the control of prices are dealt with below.

CONTROL OF PRICES.

One of the earliest repercussions of the War was the panic it caused in the commodity markets in the first few days. Prices showed a sharp tendency to rise and all food-stuffs and other commodities were immediately affected. Merchants raised prices to exorbitant levels and there was clear evidence of profiteering on an extensive scale. Between the profiteer on the one hand and the hoarder on the other the honest consumer was exploited. The government of India had foreseen the likely trend of events in the event of an outbreak of war and as soon as England declared war on Germany, the Central Government promulgated The Defence of India Ordinance, 1939, and the Defence of India Rules drawn up thereunder. Sub-rule (2) of Rule 81

of these Rules empowers the Central Government, by order, to make provision "for controlling the prices at which articles or things of any description whatsoever may be sold." Sub-section (4) of Section 2 of the Ordinance empowers the Central Government to delegate their powers both under the Ordinance and the Rules on any Provincial Government. In accordance with these powers, the Government of India issued a Notification (Commerce Department, No 20) dated 8th September 1939 empowering Provincial Governments to take measures for controlling prices subject to certain conditions which were defined both in this and in subsequent notifications. These conditions were as follows :—

"(a) The power shall only be exercised in respect of necessaries such as medical supplies, food-stuffs, salt, kerosene oil and cotton cloth woven from yarn not exceeding 20s in warp or weft.

"(b) Imported commodities, other than medical supplies, salt and kerosene oil shall not be brought within the scope of the orders without the previous sanction of the Central Government.

"(c) The orders shall be applicable to each of the following stages : sale by producer or importer, each stage of wholesale trade and the point of retail sale.

"(d) (i) In the case of goods produced in British India.—

The maximum price fixed for sales by the producer shall be so calculated from time to time as to allow for all factors, such as a rise in the cost of raw materials or millstones, which may have increased the cost of production and shall in any case not be less than a figure 10 per cent. above the ruling price charged by producers on 1st September 1939.

The maximum price fixed for sales at the wholesale and retail stages shall not be less than a figure exceeding the ruling price at the same stage on 1st September 1939, by the amount by which the price charged by the producer is allowed by the Provincial Government in whose jurisdiction the producer carries on his business to exceed the ruling price charged by producers on the said date and shall in any case not be less than a figure 10 per cent. above the ruling price at the same stage of distribution on the said date.

"(ii) In the case of imported goods :—

The maximum price fixed for sales by the importer shall be so calculated from time to time as not to be less than the sum of (a) the current cost to the importer of similar goods, and (b) the amount by which the importer's selling rate on 1st September 1939 exceeded the cost to importers prevailing on that date, and shall in any case not be less than a figure 10 per cent. above the ruling price charged by importers on that date :

The maximum price fixed for sales at the wholesale and retail stages shall not be less than a figure exceeding the ruling price at the same stage on 1st September 1939 by the amount by which the price charged by the importer is allowed by the Provincial Government in whose

jurisdiction the importer carries on his business to exceed the ruling price charged by importers on the said date at the same stage of distribution on the said date."

All the Provincial Governments in India took immediate action on the basis of the above orders. The major lines of action are similar in all cases although minor details of procedure and administration have varied as between individual Provinces.

Almost all Provinces appointed Controllers of Prices at Headquarters and empowered Deputy Commissioners and Collectors in charge of Districts to act as local controllers in respect of the areas within their jurisdiction. Both the Provincial and the District Controllers were to be assisted by Advisory Boards or Price Control Committees whose composition varied according to whether it was a Provincial or a District body. For the Provincial Committees, persons representing the interests of the agriculturists and industrial workers were also included. The function of these Committees was to advise the Controllers on price control, to keep Government in touch with the trend of trade and the difficulties experienced by traders and manufacturers and generally to keep Government in touch with the situation as it developed locally. In some Provinces, Special Committees and in others Sub-Committees of the main Committees were appointed to deal with matters connected with medicines and drugs. Such Committees in the Districts are presided over by the Civil Surgeons. They deal mainly with the prices at which imported drugs, especially of German manufacture, are to be sold. Both prior to and after the appointment of these various Committees, comprehensive press notes were issued noting the commodities the prices of which were to be controlled and warning dealers that anybody charging higher prices would be prosecuted. Hoarding or refusing to sell was also to be punished. Purchasers were advised to demand bills for all articles bought and in cases where it was felt that excessive prices were being charged, to report the same to the Police. In the Punjab where, in flagrant cases, there was proof of unreasonable profiteering, instructions were issued to the Deputy Commissioners to initiate criminal proceedings against the offenders by getting a police officer to lodge information as required by Rule 130 of the Defence of India Rules. Generally speaking, however, the initiative in the matter was left to members of the public who were requested to send complaints supported by copies of bills to the Deputy Commissioners or other officers nominated by them in this behalf.

It was realised at an early stage that world prices of food-stuffs would rise rapidly and that this would have its repercussions everywhere. In many cases prices rose from 15 to 100 per cent. Whilst some of this might very well have been due to panic, most of it must be attributed to the deliberate act of the traders to take advantage of the situation to earn quick profits. At the same time it was realised that the difficulties of keeping prices within control were enormous and not easy of solution. While the necessity of an effective control of prices was recognised, it was also felt that it would be inadvisable to deprive the cultivator of an

increase in prices which would bring some relief to his door. All things considered, the first measure of control to be introduced was to permit increases from 10 to 20 per cent. on the prices ruling on 1st September 1939. District Officers were empowered to fix maximum prices for essential commodities and to take such other steps as might be necessary to check profiteering. All District and Provincial Controllers were asked to submit to their respective Governments, every week and in prescribed forms, the prices of certain essential commodities ruling in the markets. On receipt of these weekly prices each Provincial Government published a consolidated statement showing the comparative prices of these commodities in the important markets of the Province. Special Marketing Intelligence Services were organised to assist the Controllers in this work. The *modus operandi* was to take the closing rates for ready stocks at the major source of supply of each particular commodity listed.

There were distinct cycles in the tendency for prices to rise and fall during the period September, 1939, to June, 1940. The first setback was experienced in November, 1939. Most Provinces at this time abandoned the policy of fixing maxima and an experimental measure of issuing lists of fair prices instead was adopted. Simultaneously with this, reports of relevant wholesale prices in other Provinces were ascertained and these were communicated to all the District Controllers in the Province. The month of December recorded slight increases in prices all round but a definite downward tendency set in January, which continued up to about the end of April, since when an upward trend has again been noticed.

The North-West Frontier Province placed an embargo on the export of wheat from Peshawar District to the Punjab on 7th December, 1939. On the 16th December this was extended to the whole Province. On 19th January, 1940, the Government of India called a Wheat Conference at Lahore at which representatives of the various Provinces mainly interested, viz., N.-W. Frontier Province, Sind, the United Provinces, Punjab and the Central Provinces were invited to discuss the question of the control of wheat prices. The decision reached was that the time had not yet arrived for Government to control wheat prices. Following this Conference, the N.-W. Frontier Province lifted the embargo it had imposed on the export of wheat on 2nd February, 1940.

The only Province in India which had established cheap grain shops by the time we went to Press was Bombay. The details regarding these shops have been dealt with elsewhere in this Chapter.

The Government of India convened two Conferences of the representatives of all Provincial Governments and Administrations in India to discuss questions connected with Price Control. At the first of these Conferences held in Delhi in October, 1939, the view was largely held that, so far as agricultural produce was concerned, it was undesirable to check the rise in prices, at any rate, at that time. At the second Conference which was held in January, 1940, one of the conclusions reached was that in all places where effective control had been

established there had been a tendency for supplies to dry up or to go underground and for normal business to be dislocated, and it was decided that it would be unfair, when the agriculturist was making some little profit, to put the screw on him and fix an upper limit for the prices of commodities. This Conference agreed to the desirability of the Central Government taking in hand the work of co-ordinating price control policy in the Provinces. It was decided that at the stage of production and with reference to the wholesale markets of some of the principal commodities, the Government of India should be the proper authority for limiting, should occasion arise, the prices of such commodities and that at the retail stage, the Provincial and State units should have complete freedom to fix maximum prices, such maxima being fixed on the basis of the wholesale prices fixed by the Government of India.

The following officers have been appointed Controllers of Prices in the chief Provinces in India:

Bengal: K. G. Morshed, I.C.S.; Bombay: F. J. Karaka; Madras: The Secretary to the Government of Madras Development Department, United Provinces: M. H. B. Nethersole, D.S.O., I.C.S.; Central Provinces and Berar: D. V. Rege, I.C.S.; Bihar: R. A. E. William, I.C.S.; N.-W. Frontier Province: The Revenue and Divisional Commissioner; Sind: D. R. C. Halford.

DEMANDS FOR DEARNESS ALLOWANCES.

Unlike 1914, industrial workers in India in 1939 were not slow in demanding, from their employers, increases in wages in the form of Dearness of Food or War Allowances to neutralise the rise in the cost of living. Provincial federations of unions affiliated to the All-India Trade Union Congress and individual unions forwarded petitions both to the Provincial Governments and to Associations of Employers, Railway Administrations and Large Labour Employing Organizations like the Port Trusts, Municipalities, etc., for the grant to industrial employees of dearness allowances ranging from 25 to 40 per cent over existing levels of wages. The Bombay Provincial Trade Union Congress appointed a Council of Action consisting of prominent Labour leaders in the Province to carry on intensive propaganda to secure these allowances in all industries but mainly in cotton textile mills in the City of Bombay. During the World War of 1914-18 and immediately after, Provincial Governments in India mostly followed a policy of non-intervention in disputes between Capital and Labour. Conditions then were, however, vastly different to what they are now. Trade unionism, then, was practically unknown in the country but in September, 1939, there were nearly 900 unions in India, of which nearly 700 were registered under the Indian Trade Unions Act. The majority of these Unions are under the control of communist or extreme left wing bodies, which, it was obvious, would not be slow in endeavouring to capture the imagination of the masses through propaganda ostensibly directed at securing wage concessions but in reality aimed at the undermining

of authority. It is, and always has been, the policy of Government to do everything possible to foster and encourage the growth of *bona fide* trade unionism in India. At the same time, however, Government do not desire that Indian labour should fall a prey to subversive propaganda dictated and directed by communist organisations in foreign countries. India had had bitter experiences in the years 1928-29 when a handful of communist leaders successfully dislocated almost all industries in the country by organising and carrying on large scale strikes for prolonged periods. It was vitally necessary, therefore, that subversive propaganda under the garb of trade union activities should be prevented, especially during a period when the whole country with Great Britain and the rest of the British Empire was engaged in a life and death struggle with a formidable adversary. At the same time, however, it was felt that the situation created by continuously rising prices was such that it was necessary that a certain measure of relief should be afforded to the workers and particularly to those on low rates of wages who were finding it difficult to make both ends meet.

With these objects in view, Ministers of Labour, Advisers to the Governors and other high Government officials in all the industrial Provinces of India soon established contacts and began a series of discussions with responsible representatives of the employers and the employed with the object of securing agreement on the extent of relief to be granted. In cases where no agreement was possible, employers were persuaded to grant concessions which, under existing conditions, were considered reasonable. The adoption of this policy met with considerable success in Bengal, the United Provinces, the Punjab and the Province of Madras. In the Central Provinces, Government failed to secure any concessions from employers in the Cotton Textile Industry and were impelled first to appoint a Court of Inquiry under the Indian Trade Disputes Act and then to constitute the Nagpur Textile Inquiry Committee to examine the question whether any dearness allowance should be granted to cotton mill operatives in Nagpur and if so to recommend the amount of such allowance and the date from which it should be given. The Court of Inquiry consisted of Mr. M. N. Clarke, I.C.S., District and Sessions Judge, Nagpur. The Court's Report was published in an Extraordinary Issue of the Central Provinces and Berar Gazette dated 28th March, 1940. The conclusion reached by the Court, for the reasons stated in its Report, was that no dearness allowance should be given having regard to the "present cost of living and the existing conditions in the industry." The Nagpur Textile Labour Union announced its intention to call a general strike from 8th April. A stay-in strike commenced in the Empress Mills from that date and the workers of the Model Mills struck work on the 15th April. As a result of protracted negotiations between Government on the one hand and the representatives of the Employers and the Union on the other, the strike was eventually called off on Government undertaking to appoint another Committee. This Committee was constituted by a Notification dated 1st May, 1940. Professor P. C. Mahalanobis, I.E.S. was

appointed Chairman and Mr. K. D. Guha, Director of Industries, Nagpur, a Member. Mr. S. H. Batiwalla, Manager, Empress Mills and Mr. R. S. Ruikar, President, Nagpur Textile Union, were appointed associate members to help the Committee on technical matters. The report of this Committee was published in another Extraordinary Issue of the C. P. Gazette dated 25th May, 1940. This Committee recommended that a dearness allowance at a basic rate of six pies per day per worker would be appropriate against an average rise of about six per cent. in the index number of the cost of living for Nagpur since the commencement of the war and that this should be increased by one pie for every change of one per cent. in the three monthly moving average of the index number with August, 1939, as the base month. At the moment of writing (25th June) the Nagpur Textile Mills had decided to increase but not to accept the fluctuations and then that the Management of the Model Mills would do likewise. As we go to Press, we understand that the Nagpur Textile Labour Union have refused to accept the Committee's recommendations in the matter and have decided to call a general strike with effect from 3rd July 1940.

In the Province of Bombay, the discussions on the question of dearness allowances, as far as the Textile Industries were concerned, had to be taken through the procedure laid down in the Bombay Industrial Disputes Act, 1938. According to the provisions of that Act, both employers and workers are required to serve formal notices of change in respect of any intended changes in wage rates or other conditions of employment. If the parties fail to reach an agreement, the matter goes to conciliation. As far as the workers are concerned, such notices are to be served to or through "representatives of employees." In local areas, where Unions having a membership of 25 per cent. or more of the total number of workers employed in any industry to which the Act has been applied are registered as representative Unions, such Unions are the "representative of employees." The only two Unions which have so far been registered as representative Unions in the Province of Bombay are the Textile Labour Association, Ahmedabad, and the Amalner Ginni Kamgar Union, Amalner. A registered Union and an employer can, under the provisions of the Act enter into an agreement or 'submission' to refer any dispute to the arbitration of the Industrial Court or to any third party.

In Ahmedabad, the Textile Labour Association served notices on all employers in the cotton textile industry on 15th December, 1939, demanding dearness allowances both in cash and in kind. On the parties failing to reach an agreement the matter was taken into conciliation before Mr. A. S. Iyengar, the local Conciliator. The Government of Bombay, however, considered it desirable, in view of the importance of this dispute, to refer it to a Special Conciliator and Mr. G. S. Rajadhyaksha, I.C.S., District and Sessions Judge, Ahmedabad, was appointed a Special Conciliator for this dispute on 20th January, 1940. For the reasons stated in his Report, which was published in an Extraordinary Issue of the Bombay Government Gazette dated

10th February, 1940, the Special Conciliator was not able to secure any agreement between the parties. Thereafter, several conferences, some of them presided over by Sir Gilbert Wiles, K.C.I.E., C.S.I., I.C.S., Adviser to His Excellency the Governor of Bombay, and Mr. D. S. Bakhle, I.C.S., Commissioner of Labour, were held between the parties but no agreement appeared possible and the Textile Labour Association called a general strike in the Ahmedabad cotton mills with effect from 26th February, 1940. As the result of a last minute intervention by His Excellency the Governor of Bombay, the parties agreed, by entering into a submission, to refer the dispute to the arbitration of the Industrial Court. The Court gave its award in the matter on 26th April, 1940, and this was published in an Extraordinary Issue of the Bombay Government Gazette dated 29th April, 1940. The Industrial Court awarded a cash dearness allowance of Rs. 3-8-0 for a difference of every 11 points between the official cost of living index figure for Ahmedabad for August, 1939, and the month two months prior to the one for which the allowance is to be paid. For those months for which the difference was higher or lower than 11 points, the allowance would be worked out proportionately. Thus, if the difference was 7 points, the allowance would be 7/11 of Rs. 3-8-0, if it was 18 points it would be 18/11 of Rs. 3-8-0 and so on. In addition to this, the Court ordered that cost price grain shops, to be run by a Joint Committee consisting of two representatives each of the Millowners' Association and the Association and presided over by Chairman, should be opened for cotton mill workers in that centre. By the middle of June ten such shops had been opened.

In Bombay, five elected representatives of the New China Mills served a notice on 3rd February, 1940, on the Management of the Mill demanding a dearness allowance of 40 per cent. and on their failing to secure an agreement, took the matter into conciliation. The Millowners' Association, Bombay, on the same day, made the issue a general one under section 29 of the Bombay Industrial Disputes Act and notified all mills which were affiliated to the Association that they would be covered in the ensuing proceedings. The Government of Bombay, thereupon, on 4th February, 1940, appointed a Board of Conciliation, under section 23 of the Act, consisting of Sir Sayajirao Rangnekar, an Ex-Judge of the High Court, Bombay, as Chairman, and Messrs. J. C. Setalvad, A. S. Trollop, Jannadas M. Melita and S. C. Joshi as Members, to promote a settlement of this dispute. The Conciliation Board failed to secure an agreement between the parties for the reasons stated in their Report which was published in an Extraordinary Issue of the Bombay Government Gazette dated 26th February, 1940. The Board, however, arrived at the conclusion that a dearness allowance at a flat rate of two annas per day be given during the war as an addition to the wages of cotton mill workers in Bombay to cover variations in the official cost of living index number for Bombay between 105 and 123, that this allowance should be given to all employees drawing under Rs. 150 per month, with retrospective effect from 1st December, 1939, and that in the event of the index number falling outside the limits of 105

and 123 for any three consecutive months, an adjustment of the proposed allowance would be necessary. Almost immediately after the publication of the Board's Report, the Millowners' Association, Bombay, issued a press *communique* accepting the Board's conclusions and agreeing to pay the allowances recommended. The Bombay Girni Kamgar Union and the Council of Action, however, refused to accept the Millowners' offer and they called a general strike which lasted from 3rd March to 13th April, 1940, and which involved a time loss of four and a half million working days. The progress of this strike has been fully described in the issues of the *Labour Gazette* published by the Labour Office of the Government of Bombay, for the months of April and May, 1940. The Millowners' Association carried on an intensive counter propaganda to that conducted by the Union and by the 12th April they had succeeded in securing an attendance of nearly 50,000 workers in more than half the number of mills in the City. On that day the Council of Action called a monster meeting of mill workers in the City and the meeting concurred in the decision of the Council to call off the strike.

The Government of Bombay appointed a Special Conciliator in a similar dispute between the Pratap Mills and the Girni Mills and in this case also was not successful in securing an agreement on account of the opposition of the employers to give similar disputes in the cotton textile Sholapur and in the woollen and the silk textile industries in Bombay were settled by the Chief Conciliator (Mr. S. R. Deshpande, M.B.E.) by the parties agreeing to the grant of dearness allowances ranging from one anna per day in Sholapur to one anna nine pies per day to silk textile workers and two annas per day to woollen textile workers in Bombay City. As far as the employees of the Bombay Electric Supply and Tramways Company Ltd. were concerned, the Government of Bombay on 14th March, 1940, appointed a Board of Conciliation consisting of Sir Govind Madgaokar, an ex-Judge of the Bombay High Court, as sole Member, under Section 3 of the Trade Disputes Act, 1920. This Board was also not successful in securing an agreement between the parties but it recommended that dearness allowances at flat rates of Rs. 4 per month and two annas six pies per day should be paid with retrospective effect from 1st December, 1939, to all employees of the Company drawing up to Rs. 100 per month and to daily wage earners. The Company refused to accept and announced their rates of Rs. 2 and one anna six pies per day respectively. The four Unions of this company's employees refused to accept this offer and ballots were taken on the question of calling a general strike. On the intervention of Sir Gilbert Wiles, the Board of Directors of the Company decided, on 13th June, 1940, to raise these allowances to Rs. 3 and one anna nine pies per day respectively. It is understood that the Unions concerned decided to accept this offer.

We have so far given brief accounts of the official action taken in the matter of dearness allowances in the more important industries in

the Province of Bombay and the Central Provinces and Berar. Whilst it is obviously impossible to give here similar accounts of the hundreds of other disputes that have occurred on this question both in Bombay and in the other Provinces of India since the beginning of the War, we give below the scales of dearness allowances or increases in wages granted in some of the major industries both in Bombay and in other Provinces.—

Bengal—

Jute Industry: The Indian Jute Mills Association, after consultation with the Hon'ble the Labour Minister, announced on 16th November, 1939, a general increment of 10 per cent., which was strictly to be regarded not as a war allowance but as a restoration of wage cuts made in the slump period about three years ago.

Calcutta Public Utility Companies: To workers drawing under Rs. 30 per month, Rs. 2, with the exception of the Oriental Gas Company which gave Rs. 2 to workers earning under Rs. 20 and Rs. 3 to workers earning between Rs. 20 and Rs. 30; Rs. 30 to Rs. 35—Rs. 3, the Calcutta Tramways gave Rs. 4 to workers earning between Rs. 51 and Rs. 74 and the Calcutta Electric Supply Corporation Rs. 4 to those earning between Rs. 50 and Rs. 96. In the former case earnings between Rs. 51 and Rs. 53 were to be made up to Rs. 53 and in the latter, earnings between Rs. 96 and Rs. 100 to Rs. 100.

Calcutta Municipal Sweepers: Sweepers getting less than Rs. 30—Re. 1.

Calcutta Shipping Companies: On 14th September, 1939, Calcutta Shipping Companies gave a 25 per cent. increase in wages to Indian seamen employed on 12 months' foreign agreements, and later a further 25 per cent., as a War Bonus to compensate them for the increased risk to life and property when sailing outside Eastern local waters.

United Provinces—

Textile Mills: The local Mazdoor Sabha at Cawnpore convened a Dear Food Allowance Conference on 21st January, 1940, to formulate the demands of the workers. On the eve of this Conference, the Employers' Association of Northern India notified their intention to grant dear food allowances on a graduated scale: worker in Jute Mills earning under Rs. 14 per month were to get two annas in the rupee; Rs. 14 to Rs. 18—1 anna six pies in the rupee; Rs. 18 to Rs. 24—one anna in the rupee; Rs. 24 and under Rs. 30—nine pies in the rupee; and over Rs. 30 to Rs. 75—half an anna in the rupee. Similar allowances but with a different grading of monthly earnings were to be given to workers in cotton and woollen mills in the Province.

Madras—

Cotton Mills: One anna per day to male workers and half an anna per day to women and children.

Match Making Concerns: 6½ per cent. to those earning less than Rs. 50

Municipal Scavengers: Re. 1 per month.

Punjab—

On 5th January, 1940, Government invited leading industrialists of the Province to a Conference presided over by the Hon. The Minister for Development to discuss the wage situation created by the rapid rise in prices. It was considered that it was for industrialists to take action themselves before being compelled to do so by strikes and other manifestations of labour discontent. The meeting decided that it was as yet premature to take any steps to increase the wages of the workers. Since then several individual units have granted dearness allowances ranging from 6½ to 12½ per cent. of wages.

Delhi—

Cotton Mills: For workers earning up to Rs. 20 per month—a lump sum payment of Rs. 2-8-0, Rs. 20 to Rs. 40 (in one mill and Rs. 50 in another)—12½ per cent; Rs. 40 to Rs. 75 in one mill—Rs. 5 lump sum; Rs. 50 to Rs. 70 in another mill—7½ per cent.

Bombay—

Cotton, Silk and Woollen Textile Mills: Full details have been given above.

Bombay Municipality: Rs. 2 to those drawing Rs. 50 per month or less and one anna three pies per day to daily wage earners.

Thana Municipality: Rs. 4 to those drawing under Rs. 75 per month.

Ahmedabad Municipality: Rs. 2 per month under Rs. 30. Rs. 30 and over—one anna per day.

Poona District Board: Rs. 3 per month.

Bombay Port Trust: Same as Bombay Municipality but subject to sanction of the Government of India.

Oil Storage Plants: Rs. 3 per month in some concerns and two annas per day in some others.

Soap Factories: Two annas per day.

Times of India Press: Five per cent. for those getting Rs. 100 per month or less

Aerated Water Manufacturers: Rs. 2 per month (in some concerns)

Engineering Firms: Mostly round about 10 per cent. of pay.

Bihar—

Several strikes occurred during the year in the Jharia Coalfield in which the workers demanded an increase of wages, a dearness allowance, or a war bonus amounting to 30 to 40 per cent. above the pre-war level of wages. In view of the prevailing agitation for increased wages on the ground that the cost of living had increased, the Government of India with the concurrence of the Provincial Government and the coal industry appointed Mr. A. Hughes, I.C.S., late Commissioner of Labour, Bengal, as a Special Officer to make an inquiry into the changes in the cost of living due to war conditions in the Bihar Coalfields. This inquiry had not concluded when we went to press.

Other Provinces—

Similar details to those given above are not available.

The general tendency in the grant of these dearness of food allowances has been to give a lump sum figure per month or per day in preference to a general percentage increase. The object of this is to benefit the more poorly paid workers and at the same time to give the necessary measure of relief to the better paid categories.

FIRST CONFERENCE OF LABOUR MINISTERS.

The Government of India Act, 1935, one part of which came into operation on the 1st April, 1937, had brought about a certain change in the conditions regarding labour legislation. Many of the Provincial Governments had initiated widespread schemes for further legislation and all Associations of Employers in the country had suggested to the Government of India the desirability of some action to ensure co-ordinated action in respect of labour laws. The Government of India felt that unco-ordinated labour laws and unequal labour conditions in different Provinces of India tend to depress conditions of labour all over, rather than to advance them, and that the unfortunate results of such unco-ordinated labour laws and conditions have been the migration of industry from one area to another and the development of industries in areas which are not normally suited for them but which attract such development merely because of absence of labour laws. They decided, therefore, that both from the point of view of labour as much as from the point of view of the capitalist it was necessary to co-ordinate labour legislation and with this end in view the Government of India convened a Conference of Labour Ministers from the Provincial and the State Administrations to be held in New Delhi in November, 1939. Owing, however, to the resignation of the Congress Ministries early in that month, the Conference could not be held then and had to be postponed to January, 1940. This was the first Conference of its kind and was attended by representatives with advisers from the Government of India, all the industrial Provinces in India and the Baroda and Gwalior States. The Hon'ble Sir Ramaswami Mudaliar, Member for Commerce and Labour, presided and the Hon'ble Sir Andrew Clow, C.S.I., C.I.F., I.C.S., Member for Communications and Railways, was also present. Dr P. P. Pillai, Director of the International Labour Office, Indian Branch, and Mr. M. G. Srinivasan, Government Director of Industrial Concerns, Mysore, attended as observers. The Agenda for the Conference consisted of the following items:

Prevention and Settlement of Industrial Disputes.

2. Industrial Housing.
3. Holidays with Pay.
4. Collection of Statistics concerning Labour and Industry.
5. Extension of legislation to labour employed in commercial establishments and shops.

6. Hours of night shift work.

7. Sickness Insurance.

8. Amendment of the Payment of Wages Act in the light of its working during the past few years.

9. Amendment of section 5 of the Factories Act, 1934.

10. Delegation of powers to Provincial Governments regarding Trade Unions whose objects are not confined to one Province.

The following items were not included in the Agenda but were left to be discussed after the items in the Agenda were concluded, if the Conference so desired.—

1. Unemployment Insurance.
2. Madras Weekly Payment of Wages Bill, 1939.
3. Legislation to relieve indebtedness among industrial workers.
4. Recognition of Trade Unions.

The first three items in the Supplementary Agenda were not discussed by the Conference. The Conference decided that the Central Government should draft legislation on four important subjects in the light of the discussions held on them and send the drafts to the Provincial Governments who would examine them and express their views thereon so that the next Conference of Labour Ministers to be called in January 1941 would have before it definite data to decide whether the Government of India should proceed with legislation or not. The four draft Bills would relate to industrial disputes, holidays with pay, collection of industrial and labour statistics and an amendment of the Payment of Wages Act. The Conference also agreed that Provincial and State Governments should examine other subjects like sickness insurance and extension of legislation to workers in commercial establishments and shops and to make definite suggestions regarding the line of future action on these. The Conference further agreed that Central Government undertakings in the Provinces such as Railways should be excluded from the scope of Provincial legislation but that in such undertakings the control of conditions of labour and the execution of power conferred by legislation should vest in the Centre. Regarding paid holidays it was felt that paid holidays should be given to workers deprived of weekly holidays particularly in organized industries. The proceedings of the Conference have been published by the Government of India in Bulletin No. 70 of the Bulletins of Indian Industries and Labour, copies of which are obtainable at Rs 1-4-0 each from the Manager of Publications, Delhi.

This concludes our historical survey of the growth of the Labour Problem in India. In this survey factory legislation and legislation in connection with payment of wages has been dealt with as exhaustively as space permitted. We now deal more briefly with other important phases connected with labour in India.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial countries of the world. As such she is entitled to a permanent seat on the Governing Body of the International Labour Organisation. In the memorandum prepared by the India Office of the British Government for the substantiation of India's claims as such the following figures were given to illustrate the industrial importance of the country.—

"Twenty-eight million agricultural workers excluding peasant proprietors; 141,000 maritime workers, lascars, etc., a figure second only to that of the United Kingdom; over twenty million workers in industry, including cottage industries, mines and transport; railway mileage in excess of that in every country in the world except the United States of America."

The figures for the 1931 population census which revealed a total population of nearly 353 millions show that the number of agricultural workers had increased to nearly thirty-one and a half millions. This figure excludes cultivating owners (27 millions), cultivating tenants (34 millions), landlords (over three millions) and 'others' (six and a half millions). The number of earners plus working dependants in industry, trade, transport and mines amounts to twenty-six millions. Domestic servants number eleven millions. These figures, at the best, must be considered as estimates, because even to-day no reliable statistics are available in India to show approximately correct figures of the numbers employed in each branch of industry in India. There has been no famine or epidemic

of any importance in India since 1931 and the growth in population is estimated at three to four millions per annum. It is confidently anticipated that unless this rate of growth is checked the census of 1941 will reveal a total population of nearly 400 millions. The statistics contained in the annual administration reports for factories and mines show the numbers of persons employed in factories and mines which are subject to the control of the Factories and the Mines Acts. As far as factories are concerned, it is known that there are thousands of small factories in India which are not subject to any control and no statistics are therefore available to show the numbers employed in such concerns. All that the annual factory statistics show are the numbers of factories which are controlled by the Indian Factories Act in any particular year and the numbers employed in such factories. With each expansion in the definition of the term 'factory' more existing factories come under control and are therefore included in the statistics. Such expansions mainly occurred in the years immediately following the passing of the 1891, 1911, 1922 and 1934 Acts, but since 1937 most Provincial Governments have made a wider use of the powers conferred on them by Section 5 of the Indian Factories Act, 1934, and have notified many small concerns as "factories," for example, nearly 700 small handloom concerns, printing presses and engineering workshops were notified as factories in the Province of Bombay during the year 1938. The following figures show the growth of the factory population in India during the last forty-four years.

Factory Statistics, 1894-1938.

Year.	Number of factories.	Average daily number employed.			
		Men.	Women.	Children.	Total.
1894 ..	815	275,806	53,127	20,877	349,810
1898 ..	1,098	334,594	60,603	27,532	422,729
1902 ..	1,533	424,375	85,882	31,377	541,634
1906 ..	1,855	546,693	102,796	41,223	690,712
1910 ..	2,359	624,945	115,540	52,026	792,511
1914 ..	2,936	746,773	144,157	60,043	950,973
1918 ..	3,436	897,469	161,343	64,110	1,122,922
1922 ..	5,144	1,086,457	206,887	67,628	1,361,002
1926 ..	7,251	1,208,628	249,669	60,094	1,518,391
1930 ..	8,148	1,235,425	254,905	37,972	1,528,302
1934 ..	8,658	1,248,009	220,860	18,362	1,487,231
1935 ..	8,831	1,360,131	235,344	15,457	1,610,932
1936 ..	9,323	1,400,210	239,875	12,062	1,652,147
1937* ..	8,930	1,427,103	237,933	10,833	1,675,869
1938* ..	9,743	1,481,914	245,099	10,742	1,737,755

* The figures for 1937 and 1938 are exclusive of Burma.

"Adolescents" are a new class created by the Indian Factories Act, 1934, to cover persons between the ages of 15 and 17 who have not secured certificates of fitness for employment as adults and who must continue to be employed as children. In the above table, however, the figures for male and female adolescents which have been shown separately in the Factory Statistics for the years 1935 to 1937 have been included in the figures for adult males and adult women.

The average daily number of children employed in factories shows a steady fall since 1922. This is due to stricter administration and better inspection and certification after the passing of the Amending Act of 1922. As against 67,628 children employed in 5,144 factories, in that year, the number employed in 9,743 factories in 1938 fell to 10,742. It is noteworthy

that the Millowners' Association, Bombay, reached a decision in 1922 that no children should be employed in any textile mill in Bombay City after that year. The following table gives the detailed factory statistics for the year 1938 by provinces and age and sex groups —

Detailed Factory Statistics for 1938.

Province.	Number of Factories.	Average daily number of Workers employed.				
		Adult Males.	Adult Women.	Adolescents.	Children.	Total.
Madras	1,818	128,796	50,974	9,468	5,097	194,335
Bombay .. .	2,495	402,449	71,591	4,120	948	479,103
Sind .. .	322	24,600	4,955	203	117	29,875
Bengal	1,735	495,183	59,859	6,275	1,474	562,791
United Provinces	530	148,400	5,119	1,154	412	155,085
Punjab	780	61,486	8,494	1,453	835	72,268
Bihar	311	86,137	6,384	326	187	93,034
Orissa	80	3,108	1,368	53	16	4,545
Central Provinces & Beiar	737	41,631	19,641	515	187	61,974
Assam	765	35,540	10,681	3,394	1,062	50,677
North West Frontier Province	30	1,144	30	2	5	1,181
Baluchistan .. .	14	1,985	14	..	47	2,046
Ajmer Merwara	35	12,619	1,048	11	268	13,886
Delhi	78	14,929	267	74	128	15,398
Bangalore and Coorg	13	1,012	507	14	24	1,557
Total	9,743	1,459,019	240,932	27,962	10,742	1,737,755

The annual All-India reports give detailed figures of numbers employed, by age and sex groups, only for cotton spinning and weaving mills and for jute mills and not for the other industries. It is not possible, therefore, to give a table similar to the one above by industries. It is interesting, however, to observe that of the total numbers employed as given in the above table, 431,497 men, 66,818 women, 10,565 adolescents and 3,348 children were employed in cotton spinning and weaving mills and 255,969 men, 37,773 women, 1,405 adolescents and 15 children were employed in jute mills. Out of the total number of 512,228 persons employed in cotton mills in British Provinces in India, 328,056 or 64 per cent. were employed in mills in the Province of Bombay and out of the total number of 295,162 persons employed in jute

mills in British India, 279,034 or over 94 per cent. were employed in jute mills in Bengal. The next most important factory industry is that of "engineering." This group covers engineering concerns proper, railway workshops, dockyards, metal ware factories, fine woodwork factories and saw mills, etc., and it covers between 25 to 30 per cent. of the total number employed in all factories.

MINING STATISTICS.

The collection of full statistics with regard to the number of persons employed in mines in India dates from 1924, that is to say, after the passing of the Indian Mines Act, 1923. The following table contains the statistics for the period 1924-1928 —

Mining Statistics, 1924-1938.

Year.	Total number of mines which came under the Act.	Number of persons employed.		
		Underground and open workings.	Above ground.	Total.
1924	1,804	167,779	90,498	258,277
1925	2,011	168,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,992	196,541	72,949	269,290
1928	1,948	197,398	70,273	267,671
1929	1,732	199,908	69,783	269,701
1930	1,669	191,915	69,752	261,667
1931	1,471	170,638	60,144	230,782
1932	1,281	151,924	52,734	204,658
1933	1,424	153,942	52,565	206,507
1934	1,675	170,820	58,561	229,381
1935	1,813	189,263	64,707	253,970
1936	1,973	199,917	69,676	269,593
1937	1,925	195,554	72,304	267,858
1938	1,953	223,984	82,276	306,260

MIGRATION.

The principal industry of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small territorial units. Thus, Delhi has 41 per cent. of immigrants and Ajmere Merwara 19 per cent. while Ajmere City itself has as many immigrants as natives. Immigration influences the population of India very little. The 1931 Census shows only 730,562 persons as born outside the country as against 603,526 in 1921. The total emigration from the country is estimated at a million during the decade 1921-1931. The most important inter-provincial streams of migration are those between Assam and the other provinces in India, particularly Madras and Bihar and Orissa. At the last Census, Assam showed a net gain of nearly a million and a quarter due largely to the influx of immigrant labour on plantations. The greatest loss was shown by Bihar and Orissa which suffered to the extent of 1,291,567 persons. As between British India and the Native States, the tendency prior to 1921 was for migration into British India but the position during the decade 1921-1931 was reversed. The most striking example of this in 1931 was Bikaner State which showed a net gain of 161,303. As far as labour is concerned, the greatest fluidity is to be found in Assam and the greatest immobility in Bihar and Orissa where 959 out of every 1,000 persons in the province in 1931 were born therein. Emigration of Labour from India is mainly to Malaya, Ceylon and Natal. Problems connected with the immigration of Indians into Ceylon have recently become very acute and we therefore deal with this in a separate section below.

In January 1940, the Government of India promulgated new rules designed to prevent illicit emigration of skilled workers from India

and to protect the emigrants from malpractices. The rules apply for the present only to Bombay and provide for the compulsory licensing of passage brokers whose general business is to assist the emigrant to depart from India by booking passages. Recovery of the cost of recruitment from the prospective emigrant by the licensed broker is strictly prohibited.

METHODS OF RECRUITMENT.

One of the most difficult problems connected with industrial labour in India is the method followed for its recruitment. Minor variations in the method may be found as between industry and industry but the cardinal principle is the same in all industries and that is, recruitment through the medium of a recruiting agent, a *sardar*, a *mukkadum* or a jobber.

The methods by which the jobber or recruiting agent is remunerated by the employer vary. It is reported that in the Central Provinces labourers are purchased from private contractors at so much per head. In Bengal the recruiting agent receives a lump sum payment from which he pays his men and retains the balance himself. In the textile mills in the Bombay Presidency the jobbers receive fixed salaries and perquisites both in cash and in kind from the workers whom they recruit at the time of placement and also during employment. Recruitment through contractors is most prevalent in Burma owing to the scarcity of labour in that province.

The system of recruitment followed in the case of the better paid and the more skilled jobs—especially in the engineering industry and on railways—is different. Here also, recommendation by a foreman or a headman is an important factor but in most cases the recruitment is direct because the type of man required is generally available on the spot. On railways,

a contract for a period of apprenticeship is almost always entered into. The terms of these contracts vary according to the types of apprenticeship. The periods of apprenticeship vary from two to five years according to the jobs for which the apprentices are trained.

As far as recruitment of the ordinary unskilled worker is concerned, the rapid industrialisation of many towns is creating a nucleus of permanent town dwellers and such of these as are not in employment have got into the habit of invading mill and factory gates in the mornings in the hope of securing substitute employment or of getting into a permanent vacancy. This labour is somewhat independent of the jobber but not entirely because they must keep in his good graces in order to continue in the employment which they are able to secure.

Existing methods of recruitment in Indian industries have received general approval on all sides and the Royal Commission of Enquiry into the Labour Problem have devoted much space to report to this question. For the guidance of employers, the Commission made the following recommendations:—

- (a) Jobbers should be excluded from the engagement and dismissal of labour;
- (b) Whenever the scale of a factory permits it a labour officer should be appointed directly under the general manager. His main functions should be in regard to engagements, dismissal and discharge;
- (c) Where it is not possible to appoint a full-time labour officer, the most responsible officer should retain control over engagements and dismissals;
- (d) Employers' associations in co-operation with trade unions should adopt a common policy to stamp out bribery;
- (e) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision;
- (f) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to get back their old jobs on their return. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

In pursuance of the Royal Commission's recommendations in the matter, several large organisations in India have appointed special labour officers to recruit and to look after the welfare of the labour force and from such reports as are available it is gathered that the system wherever introduced has been an unqualified success. It may therefore be anticipated that appointments of labour officers will be more widely resorted to in the near future. The Bombay Millowners' Association, in anticipation of the Commission's recommendations in the matter instructed their affiliated mills in January 1930 to introduce wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. They also recommended the introduction of a system of granting discharge certificates to contain a complete record of a worker's service and to demand the production of such certificates

before engaging new men. Messrs. E. D. Sassoon and Company, Limited, in 1933, introduced a system of decasualisation in connection with their substitute labour for the eleven mills which they control in Bombay City. Each mill makes a monthly estimate of the number of temporary men which it is likely to engage during the month and issues employment cards to the required number. These men present themselves at the gates of their respective mills every morning and substitutes are engaged only from such men as have had these employment cards issued to them. This system which is now known as the *Badli Control System* has been officially adopted by the Bombay Millowners' Association and is universally followed by all cotton mills in Bombay City under the supervision of the Association's Labour Officer.

The Government of Bombay have had, for some time, under consideration the question of labour exchanges on the lines of those existing in Japan and other industrial countries, to begin with for the cotton textile industry in the more important textile centres such as Bombay, Ahmedabad and Sholapur and to be extended, in time, to other industries and centres. Progress in this direction has not materialised owing to the opposition of cotton mill managements in Bombay who state that the *Badli Control System* is working so satisfactorily that it would not be wise to disturb it. The Government of Bombay, thereupon, decided to give this system a more extended trial and they have decided to extend the *Badli Control System* to all cotton mills in the Province. The Government of this system. In the meantime, labour exchanges have been kept in abeyance.

RECRUITMENT OF PLANTATION LABOUR FOR ASSAM.

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the provincial Governments in 1923-28 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the local Government; (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes in Assam and for the maintenance of depots at necessary intervals; (c) that

the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other provinces; (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (f) that in the event of the recrudescence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act which was passed in September 1932 and brought into effect from the 1st April 1933.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). Employers are prevented from recruiting otherwise than by means of certificated *garden-sirdars* or licensed recruiters. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband. Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15). Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Governor-General may determine for each year of levy. The

cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of cess was reduced by the Government of India from Rs. 5 to Rs. 3 from 1st October 1938. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on tea plantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and on the working of the Tea Districts Emigrant Labour Act after 1934.

A good state of affairs is shown to exist in Indian tea plantations in Assam according to the Annual Report on the working of the Tea District Emigrants Labour Act for the year 1938. The Province of Bombay continued to be an uncontrolled emigration area but notwithstanding this, 715 souls were recruited from this area during 1938. The total number of souls recruited during the year amounted to 31,193 as against 26,083 during 1937. By far the greater majority of these came from the two Provinces of Bihar and Orissa, *i.e.*, 16,198 from Bihar and 9,176 from Orissa and of these, 13,464 souls were recruited at Ranchi and 4,254 at Sambalpur. Recruiting costs for the year were, on an average, Rs. 74-15-6 per adult and Rs. 57-15-9 per soul.

The total population of adult labourers working and not working on tea estates in Assam was 604,585 at the end of 1938 and of children 548,516 making a total population of 1,153,101 as against 1,133,634 in the previous year. The average monthly earnings of men, women and children settled on the gardens amounted to Rs. 7-1-9, Rs. 5-13-4 and Rs. 4-3-4 respectively in the Assam Valley and to Rs. 6-2-5, Rs. 4-4-1 and Rs. 2-15-2 respectively in the Surnia Valley. In addition to cash wages, all estate labourers have the usual concessions of free housing, free medical treatment, maternity benefits and the right of free grazing for their cattle. Rice is supplied at concession rates in some gardens. The birth rate was 33.74 against 23.11 deaths per mille as compared with 36.58 and 22.92 respectively in the previous year.

The tea garden population consists mostly of Hindus, Christians and Animists. The number of Muslims is insignificant. Proper facilities are given to the labourers for the observance of their respective rites and religious festivals in all gardens. Facilities for playing football, hockey and other outdoor games are also afforded by several gardens.

The Government of Assam, in May 1939, appointed a Tea Garden Labour Inquiry Committee with Mr S. K. Ghosh, I.C.S., Controller of

Emigrant Labour as (Chairman and Messrs. F. W. Hockenbush (representing the Indian Tea Association), Baidyanath Mukherjee (representing Indian Planting Interests), Arunkumar Chanda and Debeshwar Sarma as Members to gather and sift all possible information regarding the frequency of strikes and disturbances in the tea gardens of Assam. The Committee functioned for only one week. Owing to the irregularities in the proceedings, the Indian Tea Association found itself unable to co-operate until certain questions referred to the Provincial Government had been authoritatively settled. In consequence, the Inquiry Committee was suspended. It is understood that the Government of India are contemplating the appointment of a Committee to enquire into wages and conditions of employment of Indian Labour employed in tea gardens in Assam.

IMMIGRATION OF INDIAN LABOUR INTO CEYLON.

The estimated total population of Ceylon at the end of 1938 was 5,864,500. Of these about 800,000 or nearly 14 per cent. were Indians. The principal industries of Ceylon are tea and rubber and of a total cultivated acreage of 3,536,437 acres, 605,200 acres are under rubber and 559,237 acres are under tea. The number of Indian labourers and their dependants on estates on the 31st December 1938 was 682,570 comprising 463,473 workers and 219,097 non-workers. The total number of estates employing 5 or more Indian labourers and paying acreage fees to the Indian Immigration Fund on the same date was 1,325.

The arrangements connected with the recruitment of labourers in India for estates in Ceylon are in the hands of the Ceylon Emigration Commissioner appointed by the Ceylon Government under Rule 3 of the Indian Emigration Rules, 1923, with his headquarters at Trichinopoly which is the centre for the recruiting areas in South India. He is also the head of the Ceylon Labour Commission of the Planters' Association of Ceylon. His assistants have their headquarters at Madurai, Salem, Trichinopoly, Vellore and Mandapalam. Other officials connected with emigration to Ceylon are the Protector of Emigrants at Mandapalam appointed by the Government of Madras and the Superintendent of Mandapalam Camp who is the representative of the Ceylon Emigration Commissioner and is also the Quarantine Medical Officer.

The Ceylon Labour Commission representative receives and checks the labourers arriving from the various Labour Depots; supplies *cumblers* free of cost to labourers in cases where he is authorised to do so by the estate concerned, and clothes, if any, ordered by the Protector of Emigrants, at the cost of the Indian Immigration Fund; and generally looks after them during their stay in the Camp. The Ceylon Government Quarantine Department enforces the provisions regarding detention, medical examination, vaccination, disinfection, etc. The Ceylon Government Labour Department registers the labourers as required by the Ceylon Labour Ordinances and arranges for their feeding and despatch to Ceylon accompanied by Labour Department Escort Peons. The Ceylon Govern-

ment Medical Department treats the labourers for ankylostomiasis. The Madras Government Protector of Emigrants with his Medical Inspector examines the labourers to see whether the Indian Emigration Rules are being observed, and whether labourers may be passed for despatch to the estates in Ceylon or rejected to be returned to the villages from where they had been recruited. The Protector also orders the supply of clothes to such of the labourers as are ill-clad.

In October, 1936, a Commission was appointed with Sir Edward Jackson as Sole Commissioner to enquire into the question of restriction of immigration into Ceylon with particular reference to whether such immigration had caused or was likely to cause unemployment or other economic injury to the permanent position of the Island and whether any restriction or control beyond that already existing should be imposed on such immigration and, if so, what form such restriction or control should take. The report of the Commission was published in April 1938. The Commission's main conclusions were: (1) As long as it is necessary for Ceylon to rely on immigrant workers and as long as she can get them from India, the rise and fall of immigration will follow the same rule, however the total numbers may be affected by increased employment of Ceylonese; (2) So far from causing economic injury to the permanent population, immigrant workers made possible an economic and general advance which could not have taken place without them and in the benefits of which the great majority of the population, directly or indirectly, share to-day; (3) There is no evidence to show that there is undercutting on the part of Indians in wages. Even if such undercutting exists at all, it is no considerable factor influencing employment; (4) In the case of estate workers the existing means of control of immigration are fully adequate to enable the numbers entering the Island to be restricted to any extent desired; (5) In the case of non-estate workers any attempt to restrict the immigration of workers from India would be attended with grave risk to the economic prosperity of the Island until there is adequate proof—and there is none at present—that there is sufficient indigenous labour adequate and efficient enough to take up work which has so far been done by the immigrants; (6) Having regard to the fact that the causes of such unemployment as there is among indigenous labourers are mainly to be found in long established racial tradition, social habits and deep-seated prejudices and disabilities growing from the same roots, restriction of Indian Immigration will not help the employment of Ceylonese. The weapon of restriction used too soon will merely deprive the Island of labour essential to its needs; (7) Restriction by means of quotas or the compulsory employment of Ceylonese workers without sufficient proof that an adequate number of Ceylonese labour is available for work which Indians do at present will only cause grave risk to the sources of employment; (8) The main problem is very definitely not one of preventing the immigrant workers from driving the Ceylonese out of work, but a problem of how to enable the Ceylonese workers to do the work which the immigrant has so far made his own.

The Executive Committee of Labour, Industry and Commerce of Ceylon decided in June 1938 to recommend to Government the prohibition of

immigration into Ceylon as a measure to relieve local unemployment. This decision ignored the Jackson Report which advised against this prohibition. In June 1939 the Government of Ceylon issued orders for the repatriation of non-Ceylonese daily paid labour who entered Government service prior to 1st April 1939. The first lot of workers to be dismissed under these orders were those who arrived in Ceylon after 1st April 1934. These orders and the action taken thereon were the subject of universal condemnation in the Indian Press and the Government of India took retaliatory measures by placing a ban on the emigration of Indian Labour to Ceylon in July 1939. Several groups of Indian workers in Ceylon itself decided on retaliatory action and it was reported that Indian daily paid labourers employed at the salt works threatened to resign en bloc as a protest against the Government's repatriation scheme. In August 1939, the Government of Ceylon proposed to introduce in the State Council a Bill to restrict and control immigration. All immigration was to be controlled by Government by means of permits and no immigrant would be permitted to enter the island in search of employment without a permit from Government.

Full information regarding the economic position of Indians employed in tea and rubber estates in Ceylon together with statistics of migration into Ceylon are contained in the Annual Reports of the Agent of the Government of India in Ceylon. These reports are obtainable from the Manager, Government of India Press, New Delhi.

LABOUR IN INDIAN MINES AND THE MINES ACTS.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Act of 1935. The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground mines and 48 hours per week for surface mines. These limits were prescribed for mining managements preferred to have longer week ends off and others to work their mines by shifts, the maximum weekly hours were crowded into as few days as possible and excessive daily hours continued to be worked. There were consequently insistent demands from the representatives of the miners for the fixation of a daily limit and the Government of India therefore introduced a Bill in the Legislative Assembly in March 1927 to fix a maximum limit of daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select Committee appointed to examine the Bill. The majority of the Committee, however, adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be gradually worked up to and they recommended a re-examination of the whole

question after the new provisions had been in operation for a period of three years. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 which was brought into effect from 1st April 1930.

The Royal Commission on Indian Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated an 8-hour day while the majority favoured a 12-hour day but they suggested that weekly hours above-ground should be reduced to 54. In the meanwhile, the Fifteenth Session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries, and this Convention prescribed that the hours of work should be limited to 7½ per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 22nd March 1932 and resolutions were adopted by both chambers to the effect that Government should re-examine the whole position. The Government of India accordingly referred the matter to all local Governments and on receipt of their replies introduced a Bill in the Legislative Assembly on the 22nd January 1933 for a further limitation in mining hours. It was passed in the same session and was brought into effect from the 1st October 1935. The main provisions of the 1935 Amending Act are as follows:—

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than eleven hours.

(c) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited.

(e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

PROHIBITION OF THE EMPLOYMENT OF WOMEN IN MINES.

The Government of India promulgated regulations under section 29(f) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1939 and in all other mines with effect from the 1st July 1929. As the summary exclusion of women in the main coal fields would have resulted in a very serious dislocation in the industry, a principle of gradualness was

laid down and it was prescribed that in mines in certain provinces women might still be employed underground up to 1939 provided that the total number of women so employed at any time in any mine did not exceed a gradually decreasing percentage of the total number of both men and women employed underground. The annual decrease was to be 3 per cent. in coal and 4 per cent. in salt mines. The number of female employed underground in mines from 1929 up to 1939 when they were totally excluded was as follows:—

1929- 24,089;	1930- 18,684;	1931- 16,841
1932- 14,711;	1933- 12,799;	1934- 11,193
1935- 9,551;	1936- 7,301;	1937- 3,887

HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

Although certain associations of employers like the Indian Jute Mills Association and the Millowners, Association, Bombay, have made efforts during the last few years to secure a certain measure of standardization in conditions in the concerns controlled by their members, conditions of work and employment in Indian industry vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries annually compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all-India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series of four admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perennial factories of the Province of Bombay in 1934. These four reports cover (1) the engineering, (2) the printing, (3) the textile (cotton, silk, wool and hosiery) and (4) all the remaining perennial factory industries. It is true that these reports are of a somewhat limited character in so far as territory is concerned, but owing to the existence of innumerable variations, the reports are fully indicative of conditions in the whole of India.

HOURS OF WORK.

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. Speaking broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The cotton textile industry in almost all centres works a uniform 9 hour day except in a few concerns which work a 9½ or 10 hour day from Mondays to Fridays and a 5½ hours or 4 hour day on Saturdays. A recent development

in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being. Messrs. E. D. Sassoon & Co., Ltd., in certain of their cotton Mills in Bombay City, have been working three shifts of seven hours each for the last four or five years; but conditions in these Mills are highly rationalised; that is to say, more machines are allotted to each worker, spindles being asked to mind two sides and weavers six looms as against the normal of one side and two looms. As far as the Jute Mill industry is concerned, the Indian Jute Mills Association entered into an agreement intended to protect and defend the trade of the Indian Jute Mills which came into force on the 15th March 1939 for a period of five years in the first instance. The hours of work are to be ordinarily limited to forty-five per week. If 75 per cent. of the signatories vote for reduction, the hours of work may be reduced to a minimum limit of 40 hours per week and if 51 per cent. of the signatories vote for an increase the hours may be raised to a maximum limit of 54 which may be exceeded only under extraordinary circumstances such as a cycle of prosperity or war. Under such conditions Mills with 270 looms are entitled to work up to 72 hours per week. If one unit in a "group of mills," i.e., under the same management, does not work the full complement of hours allowable, it may transfer the unutilised number of hours of work to the other unit under the same management.

As a result of the outbreak of War, large orders were placed with jute mills in India for gunny bags for the purpose of being used as sand bags. All jute mills in India, consequently, started working a full 54 hour week and when even this proved insufficient, jute mill managements requested Provincial Governments to grant them exemptions from the provisions of the Factories Act relating to weekly and daily hours of work. Such exemptions have been granted to all jute mills in the Provinces of Bengal, Bihar and the United Provinces. Similar exemptions have been granted to many concerns connected with the manufacture of ammunition and other munitions of war. Hours of work in jute mills in Bengal have varied as follows during the last four years:

6th April 1936 to 28th July 1936, 50 hours a week; 29th July 1936 to 25th September 1938, 54 hours a week; 26th September 1938 to 19th February 1939, 45 hours a week (under Bengal Jute Ordinance); 20th February 1939 to 31st July 1939, 45 hours a week (under Agreement); 1st August 1939 to 16th September 1939, 40 hours a week (under Agreement); 18th September 1939 to 4th November 1939, 54 hours a week (under Agreement); 6th November 1939 to 6th April 1940, 60 hours a week (under Agreement); 8th April 1940 onwards, 54 hours a week.

All the dock-yards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic

shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills. Almost all seasonal factories work a uniform 10 hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible, to close on the local bazaar day. The "Statistics of Factories" compiled by the Government of India for the year ending 31st December 1938 for all factories subject to the Factories Act, 1934, gives the following summary table regarding hours of work in all factories in India:—

Percentage of factories in which normal

weekly hours are:—

	Not above 42	Between 42 & 48	Above 48		Not above 48	Between 48 & 54	Above 54
<i>Perennial.</i>				<i>Seasonal.</i>			
For Men ..	5	24	71	For Men ..	25	11	64
For Women ..	12	19	69	For Women ..	34	9	57

In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, work is arranged on a system of three shifts—the different shifts changing over

every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week.

The hours of work in Indian Mines vary widely and range from 38 to 51 hours per week. The following table sets out the average hours worked per week in underground workings in some of the more important mining fields in India during the year 1938.

Mineral Field.	Over-seers.	Miners.	Loaders.	Skilled Labour.	Un-skilled Labour.
Jharia Coalfield (Bihar) ..	48	45	45	47	47
Raniganj Coalfield (Bengal) ..	50	46	46	48	48
Girdih Coalfield (Bihar) ..	44	43	42	46	46
Assam Coalfields ..	47	46	48	46	48
Punjab Coalfields ..	45	42	43	43	44
Baluchistan Coalfields ..	38	38	38	40	..
Pench Valley Coalfields (C.P.) ..	50	48	49	50	50
Central Provinces Manganese ..	40	48	..	49	49

In open workings and on surface the weekly hours are slightly higher.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of twelve hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours. As far as the hours of work of other classes of Railway servants are concerned, the Indian Railways Act, 1890, was so amended in 1929 as to empower the Governor-General in Council to make rules for the limitation of hours of work of and of grants

of periodical rests to certain classes of railway servants. Under the new powers, the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These provide a 60-hour week for persons engaged in continuous work and an 84-hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other Acts such as in railway workshops, running staffs and watchmen, watermen, sweepers and gatekeepers whose work is both intermittent and of a specially light character are excluded from the operation of the rules. The Report of the Supervisor of Railway Labour for the year

1938-39 states that all the Railways on which the Regulations in connection with Hours of Employment are now in force generally maintained a satisfactory standard in their application and took prompt measures to rectify the irregularities that were brought to their notice. The most important matter in which there were frequent differences of opinion between the Supervisor of Railway Labour and the Railway administrations was the classification of staff. In their natural desire to keep the expenditure low, Railway administrations are sometimes inclined to take a less liberal view and classify the staff as "essentially intermittent" when they should be "continuous," or exclude them altogether from the scope of the Regulations which should not be the case.

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33½ per cent. over ordinary rates. On circulation of these proposals by the Government of India, most of the provincial Governments affected were of opinion that under the existing organisation of dock labour in India, legislation for the control of hours was not practicable owing to the insurmountable difficulties which would be experienced in enforcement. The authority of the Karachi Port were thereupon advised to try out an improvised method of declassification which would involve registration of all dock workers. Stevedore labourers have however, as a result of considerable agitation by their unions, succeeded in securing a reduction in their hours of work from 12 to 14 hours per day to nine to eleven hours per day.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India has had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns.

HOLIDAYS WITH PAY.

The question of allowing industrial workers the right of having annual holidays with pay has recently become of international interest owing to the twentieth session of the International Labour Conference held in June 1936 having adopted a draft Convention on the subject of annual holidays with pay. The application of this Convention is of an exceedingly wide character and it is intended to cover almost every class and type of industrial and commercial worker. By virtue of Article 2 of the Convention, "every person to whom this Convention applies shall be entitled after one year of continuous service to an annual holiday with pay of at least six working days." The Indian Legislative Assembly by a resolution adopted on the 26th January 1937 decided that India should not ratify this Convention.

In India, holidays with pay are enjoyed only by a very small percentage of the population; but, owing to the preponderance, in numbers employed, of the workmen in Government and railway factories and in the factories owned by public and local bodies and public utility companies, the engineering industry in India easily outstrips all other industries in the leave with pay privileges which are enjoyed by its workers. The leave rules of different administrations vary widely, and different sets of rules are adopted not only for different classes of employees of the same administration but also for the same or similar types of employees, according to the dates when they first joined service.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the local Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece-rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus ten to twenty days casual leave in every calendar year. To cite an example of special leave rules for certain categories, reference may be made to daily rated workmen and piece workers in all ordnance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty years' service.

The leave rules for railway workshopen who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. One big company-owned railway grants fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all work-shop employees irrespective of a qualifying minimum period of service.

The information collected on the question of leave with pay by the Government of Bombay for the purposes of its General Wage Census in perennial factories in the Bombay Presidency showed that out of 221 engineering concerns in the Presidency, 72 employing 28,502 workers or nearly 60 per cent. of the total number employed grant leave with pay to most of their workers and that another 16 employing 6,800 workers or 14.09 per cent. employed in the industry grant leave with pay to certain categories only.

In cotton textile and jute mills certain categories of workmen on the mechanical and subordinate supervisory establishments are granted varying periods of leave in most units. Leave with pay to workmen is granted by a few large corporations such as the Burma-Shell Corporation, General Motors (India), Ltd., and the Tata Hydro-Electric and Power Companies, etc. Taking all Indian industrial workers as a whole, it would perhaps not be incorrect to say that barely five per cent. enjoy leave with pay privileges.

The question of "Holidays with Pay" for industrial workers in India was one of the items discussed at the First Conference of Labour Ministers held at New Delhi in January 1940. The general opinion of the conference on this subject was that paid holidays should be given to workers deprived of weekly holidays and that some amount of paid holidays should be given to workers in organised industries. It was decided that the details as to what industries should be selected for the purpose, how holidays should be distributed over a period and whether they should be given at various times according to the needs of workmen could be looked into when the Bill on the subject was drafted. It was held that the need of co-ordination as between the various Provinces was obvious and the general consensus of opinion was in favour of Central rather than Provincial Legislation on the subject.

PRINCIPLES OF WAGE FIXATION.

Wage rates in the industrial countries of the West are mostly based upon union rates—accepted both by employers and employees—trade agreements, awards by arbitration or conciliation boards or, in countries which have Trade Boards Acts for the fixation of wages in unorganised industries where association of workmen is weak, upon the decisions of Trade Boards. In India, the bargaining power of the workman, owing mainly to his illiteracy, is very weak, and the employer is more or less free to fix any wages which he likes or, at the most, to bargain with his prospective workman. The labour costs in all Government and railway concerns and in the establishments run by local or public bodies, however, have to be accurately budgeted for and in such concerns wage rates are fixed. Each occupation is divided into a number of grades or classes and the number of posts in each grade is carefully determined; but the basis of grading varies widely between the different administrations. Promotion from a lower grade to a higher usually depends both upon merit and the passing of trade tests and is not automatic. The rates for the different grades are determined by "professional officers" as in the case of His Majesty's Indian Naval Dockyard or on information published by Government departments of industries and labour. In privately owned concerns, the governing factors in wage fixation are the demand for and the supply of the type of labour required, personal efficiency and current rates in the locality where a concern is situated, but once a worker's rate has been determined, it is not varied unless a general increase or cut is applied to a whole establishment or a department of the establishment.

TYPES OF RATES AND ALLOWANCES.

Wage rates in the West are generally either consolidated hourly time rates or piece rates and the calculation of earnings from such rates is both simple and easy. Some progress has been made in India during recent years in the direction of payment of wages on the basis of hourly rates in a few large engineering concerns but this form of payment is very rare. The most common types of payment of time rates are daily rates or monthly rates; and, in some cases, where wages are paid weekly or fortnightly, weekly or fortnightly rates. The calculation of earnings from hourly or daily rates does not offer any difficulty except in the case of daily rates in concerns which work a short Saturday. Here, some concerns pay half the daily rate or *pro rata* the daily rate for number of hours worked or the full daily rate provided that all the days from Mondays to Fridays or the Thursday and the Friday have been put in. Calculation of earnings from monthly rates, on the other hand, used to be so devised as, generally, to deprive the monthly paid worker of a part of his dues. Some concerns calculated earnings from monthly rates on the basis of all the days in the month and deducted pay for the weekly holiday. Others made payment for the weekly holiday conditional on the Saturday or Monday or both having been put in. Still others paid wages for one, two or three Sundays (but not for all) on the condition that certain specified numbers of working days in the month concerned were put in. A few calculated earnings *pro rata* the number of working days in the month. Thus a worker on Rs. 27 per month would receive Rs. 24 for 24 days work in a 27-day month. The Payment of Wages Act makes the last method obligatory on all concerns which pay on monthly rates of wages. In certain cases monthly rates are for the Hindu calendar month or a month of 30 many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours, or for a 'book month' of 30 many complete weeks.

Calculations of earnings from piece rates offer no difficulty in cases where they are based on number of articles produced but they are exceedingly complicated in cotton weaving. Some mills pay on the basis of weight, others on length. The rates vary according to reed space and picks to an inch and are further complicated by allowances for different types of borders and dobby designs. Certain units, especially in the printing industry have task rates which are a combination of time and piece rates. Certain engineering concerns in India have introduced the Halsey Weir or the Bedaux point systems of payment.

The International Bedaux Company of New York and Amsterdam which is the largest organization of industrial consultants in the world extended its activities to India in 1936 with the founding of the Eastern Bedaux Company located at Construction House, Ballard Estate, Bombay. Comprising a staff of trained industrial engineers, the company provides an expert consultant service for all industrial problems of organization, costing

and labour and equipment rationalization. Studies, by the Company, are at present in progress in 20 per cent. of the jute mills in Bengal as well as in 25 per cent. of the number of the cotton mills in Bombay City. Other fields of investigation include the Oil, Chemical, Cement and engineering industries, and in the present emergency Government have engaged the services of the Bedaux Company as advisers in the manufacture of armaments and munitions.

Allowances.—Very few industries in India today pay a consolidated wage. Wages are usually made up of two components: (1) a basic wage; and (2) a dearness of food or war allowance. The term "basic wage" should not be taken to indicate that a certain wage has been fixed or standardized by collective agreement or has any relation to a particular period of time. Apart from the cotton textile industry in Ahmedabad where the wages of spinners and doers in ring spinning were standardized in 1920 and the piece rates of weavers were standardized in 1937 and in Bombay where the Millowners Association introduced a Schedule of Minimum Time Rates of wages for unrationalized occupations in 1934, there is very little standardization of rates in any centre of any industry in India. Wage rates vary widely between unit and unit and centre and centre in every industry. The "basic wage" is, therefore, some hypothetical rate fixed for an occupation by an individual unit in relation to some period of time of its own choosing. The amounts paid as *moghari* or dearness allowances also vary widely between industry and industry but a certain measure of uniformity for the units of a particular industry in a particular centre are to be found in the cotton textile industry. For example between 1920 and 1933, cotton mill workers in Bombay City were paid a dearness allowance of 80 per cent. on basic rates for men on piece rates of wages and of 70 per cent. for men on time rates of wages and for all women. In 1933, the Millowners Association, Bombay, permitted its members to take individual and unilateral action in the matter of wage reductions. Certain mills reduced basic rates, others reduced the allowances and still others effected reductions in both basic rates and allowances. In 1934, however, basic rates and dearness allowances were consolidated for the purposes of the Schedule of Minimum Rates of Wages for the time rated occupations referred to above. It was also decided that when the New Factories Act came into operation from January 1935, no mill should pay a dearness allowance of less than 45 per cent. on the wages of piece rated workers. The 'basic rates' however, except in the cases cited, continued to vary between unit and unit. The general tendency during the years 1935 to 1939 was to consolidate the basic rates and the legacy of the dearness allowances which had been paid during the world war of 1914-18 and for many years after the end of that war, but with the advent of the present war in September 1939, dearness allowances have again been reintroduced in almost all industries in India as a separate item.

Bonuses.—The system of paying good attendance bonuses was widely prevalent in several industries in India up to a few years ago but

they were tending to disappear during the last few years. In November 1937, the Government of Bombay held that the effect of the definition of "wages" in the Payment of Wages Act is to incorporate into wages any bonus that may be offered by the employer for good attendance, good work, good production or matters of that kind and that such bonuses become payable whether the conditions governing the earning of the bonus are fulfilled or not. This point was tested in a court of law in Ahmedabad and went to appeal. A brief description of the case has been given in the section dealing with the Payment of Wages Act, Bulletin No. 70 of The Bulletins of Indian Industries and Labour which contains the Proceedings of the First Conference of Labour Ministers held at New Delhi in January 1940 contains, at pages 63 to 71, the copies of the memoranda prepared by the Governments of India and Bombay together with the record of the discussion which took place on the subject of The Payment of Wages Act with special reference to the definition of the term "wages" and the relation of 'bonuses' thereto. The Conference held that a radical revision of the whole of that Act would be necessary.

Overtime.—The term "overtime," in general parlance, is applied to all extra time put in by a worker outside his normal specified daily hours of work, and in England and many other industrial countries all overtime is remunerated at higher rates which vary according to whether the overtime was worked immediately prior to normal starting or after normal closing, during the luncheon hour, at night, on a Saturday afternoon or on a Sunday or a holiday; and overtime rates often go up to more than double ordinary rates. In India, the Factories Act, 1934, requires that the overtime rate for hours in excess of the statutory weekly hours shall be a time-and-a-quarter for hours in excess of 5½ and a time-and-a-half for hours in excess of 60. These provisions apply only to those cases where the statutory hours have been allowed. Legally, as long as the daily or weekly statutory hours are not exceeded, an employer need pay nothing extra for overtime work outside normal hours, and in practice very few employers do so. On certain railways where monthly rates are for a month of 208 hours, all time—both ordinary and overtime—is credited to the normal hours' account and payment at overtime rates does not come into consideration until such time as the monthly hours are exceeded. Where overtime rates outside the requirements of the Act obtain, these are generally a time-and-a-quarter the ordinary rates, but very few concerns indeed pay enhanced overtime rates for extra time beyond normal daily hours. In many cases workers are called upon to put in compensatory time after normal hours for time lost owing to late attendance or absence and in others workers who put in overtime are asked to take compensatory time off during specified working hours on the day following that on which overtime was worked. These methods mean that the same rate is given for both normal and overtime work. In many other cases, no additional remuneration whatever is paid for overtime outside normal hours.

PAY PERIODS AND WAITING PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district; and within the same establishment different classes of workers are paid for different periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *haptas* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Solapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly bases in sugar mills and in the Tata Iron and Steel Works at Jamshedpur where nearly 50,000 workers are employed. In these concerns wages are paid weekly to men on daily rates and monthly to those on monthly rates. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the provincial Governments and interested persons and bodies, on three different occasions within the last sixteen years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

Periods elapsing before Payment.—The 'waiting period' or the time which elapses between the end of the period for which wages are earned and the date of payment varied considerably as between industry and industry and between establishments in the same industry. The longer the period, the more the wages which were earned but not received, and the more the date on which wages fell due. The Payment of Wages Act prescribes that wages in all factories employing 1,000 or more persons must be paid

within ten days and in factories employing less than 1,000 persons within seven days of the end of the period for which wages fall due.

SUPERANNUATION BENEFITS AND FINANCIAL AID.

The subjects which we deal with under this section are pensions, gratuities, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. Where permanent monthly paid workers on piece rates are admitted, the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

Gratuities.—All railway employees and the employees of local and public bodies and a few public companies receive gratuities. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than nine years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. Certain Government servants who by the terms of their contracts are not eligible for pensions are compulsorily required to subscribe to the contributory section of the General Government Provident Fund. In such cases both Government and the Government servant concerned subscribe one month's pay each per year to the fund. All pensionable Government servants except certain classes of industrial workers and menials have the option of subscribing to the non-contributory section of the fund, subscriptions to which vary from 12 to 30 pice to the rupee of income at the option of the subscriber. Very few industrial workers of Government, however, take advantage of this section of the fund mainly because, apart from the compound interest which his subscriptions earn, the worker does not stand to gain anything on his outlay.

In cases where large bodies of non-pensionable Government servants are brought under the operation of contributory provident fund schemes special funds such as the State Railways Provident Fund and the Indian Ordnance Factories' Workmen's Provident Fund, which are governed by special rules, are formed. Company owned railways have schemes similar to that for State railways. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma-Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

Co-operative Societies.—The co-operative movement has made very rapid progress in industrial establishments all over India during recent years, and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces. It is impossible to attempt even a brief summary of the movement here but a few details regarding one of the best of such societies would be of interest.

The Jackson Co-operative Bank on the B. B. & C. I. Railway is perhaps the biggest and the best managed co-operative credit society of industrial workers in India. During the year ending 30th June 1939 it had a membership of 37,005 with a share capital of Rs. 3.96 lakhs and

a reserve fund amounting to Rs. 3.72 lakhs. It receives both fixed deposits and ordinary deposits in its savings bank branch; and it also issues cash certificates to all railway employees earning Rs. 125 or less per month. Fixed deposits for the year ending June 1939 amounted to Rs. 24.67 lakhs and savings bank deposits to Rs. 36.57 lakhs which, together with capital, gave the society a working fund of Rs. 72.73 lakhs for the year. The number of new loans issued during the year amounted to 14,200 and involved a sum of Rs. 49.54 lakhs. The bank has been declaring a 7½ per cent. dividend for the last five years. A special feature of the activities of the Bank is a new scheme which it has recently introduced for redemption of debts. Members of the society who are in debt are encouraged to bring a complete list of their debts to the Bank which, with the assistance of the Staff Officer of the Railway, interviews all creditors and arranges with them to compound the debts for much lesser sums in return for ready payment. The total amount so paid to members' creditors are treated as loans and recovered in easy instalments spread over 72 months. The Bank also contributes an amount of Rs. 10,000 annually to a special Staff Welfare Fund started by the railway administration at the instance of the Bank "to look after the welfare of the staff in general and of low paid staffs and their families in particular." Welfare centres which have been opened at various stations on the line render help by way of supplying milk to the children of the needy, by nursing the sick and by opening hygiene clinics. In commemoration of its Silver Jubilee, the Bank started a Silver Jubilee Benevolent Fund in 1938 out of its past accumulated surplus profits of Rs. 1,79,849 to which additions are to be made from future surplus profits. The sole object of this fund is to ameliorate distress among the widows and children of deceased members drawing a salary of Rs. 80 per month or under who may be left in indigent circumstances.

Grain and Cloth Shops.—Cheap grain shops were opened by many large industrial establishments all over India during the period of the World War in 1914-18 and were continued for some years after the end of that War owing to the prevalence of high prices. With the fall in prices the majority of these shops disappeared. Prior to 1936 when the Payment of Wages Act was passed many cotton textile mills had cheap cloth shops for the benefit of their workers. The Payment of Wages Act, however, prohibits employers from making deductions from wages or from receiving payments from their employees for purchases from employers' shops. This is in accordance with one of the main cardinal principles of Truck legislation which was originally intended to prevent employers from forcing their workmen to buy articles from their own shops at fantastically high prices. A few Provincial Governments in India have, however, notified cheap grain and cloth shops as "amenities" in respect of purchases from which employers may make deductions from wages. In all such cases both the qualities of the articles sold in such shops and the prices charged for them are controlled by the 'prescribed authority' who is usually the Chief Inspector of Factories. As a result of the outbreak of War in September 1939, the Government of Bombay have started many cheap grain shops in Bombay City.

certain grains and foodstuffs are purchased by the Controller of Prices on the advice of the Purchase Sub-Committee of the Consultative Prices Committee appointed by Government to advise the Government and the Controller in the matter of prices control. Government advanced an amount of Rs. 1,40,000 for the purpose of opening these shops. The grains are bought at wholesale prices and are sold without any profit except for an addition to cover the working expenses of the shops. The Government of Bombay have also approved of a Scheme for the opening of cost price grain shops in the Surat District by the Surat District Co-operative Purchase and Sales Union and has guaranteed half the amount of loss, if any, which may be incurred during a period of six months, subject to the maximum amount of Rs. 2,000. Other Collectors of Districts have been advised to introduce similar schemes in their Districts.

The Industrial Court, Bombay, in its award on the Dearness Allowance Dispute referred to it under a joint agreement or "submission" entered into between the Ahmedabad Millowners Association and the Textile Labour Association, Ahmedabad, decided that cost price grain shops should be started for cotton mill workers in Ahmedabad. The cost of management of these shops is to be included in the price at which the articles are sold. The running of the shops is to be supervised by a Joint Committee consisting of two representatives each to be nominated by the two Associations. This Committee is empowered to decide the following questions: (i) the number and location of the shops; (ii) the qualities of the articles to be supplied by the shops; (iii) the prices to be fixed for these commodities; (iv) the extent to which each worker should be entitled to avail himself of these facilities, etc. The Joint Committee, may, if it so desires, refer any point in connection with the administration of these shops for the decision of the Industrial Court.

Loans and Advances.—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers local Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial em-
discipline have
both the Central
in this country
for the last fifteen years. Early in 1926, the
Government of India asked all local Governments

to make enquiries, in their respective administrations, into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The Government of Bombay conducted an extensive enquiry into the subject in the Bombay Presidency and as a result of their investigations came to the conclusion that abuses sufficient to justify legislative action for their control were prevalent. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of recommendations in the matter. The Payment of Wages Act, which has already been dealt with in an earlier section, was passed in 1936, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. Indian employers state that it is inherent in the Indian workman to make frequent changes in his employments and also to resort to frequent abstentions from work. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied; but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1930 were: Ahmedabad 3.80, Bombay 10.50, and Sholapur 10.77—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

Under the Payment of Wages Act, every employer in every industry to which the Act has been applied is required to draw up lists specifying the acts or omissions for which fines will be inflicted. These lists have to be approved by such authorities as the Local Governments may prescribe and are required to be prominently displayed in all places where the employees concerned are working. Apart from this employers were not required to draw up any Standing orders or rules of conduct governing the conditions of employment between them and their employees, and with the exception of the industrial establishments conducted by

Government or Public Bodies such as Municipalities and Port Trusts and the Cotton textile mills affiliated to the Bombay Millowners' Association, very few employers in India had framed Standing Orders for operatives. The Bombay Industrial Disputes Act 1938, however, requires every employer in an industry to which the Act is made applicable to submit a draft for such Standing Orders to the Commissioner of Labour within two months of the date of the application of the Act to any industry; and the Commissioner of Labour is empowered to "settle" such standing orders after he has consulted all the interests concerned in the industry. Appeal against the orders of the Commissioner of Labour lies with the Industrial Court constituted under the Act. In accordance with these provisions, the Commissioner of Labour, Bombay, settled the Standing Orders for Cotton mill operatives in Bombay, Ahmedabad, Solapur and other centres in the Province of Bombay in September and October 1939. Appeals against most of these Orders were filed with the Industrial Court both by individual employers and associations of employers and by Trade Unions and individual workers. These appeals were heard by the Industrial Court in November 1939 and the Court, after hearing the parties, settled a new set of Standing Orders which it directed should come into force on and from 12th December 1939. Copies of these Standing Orders can be obtained from the Secretary, The Industrial Court, High Court, Bombay. Since the beginning of this year many employers all over India have drawn up Standing Orders for their operatives on the lines laid down by the Industrial Court, Bombay.

INDUSTRIAL HOUSING.

Residential buildings in all countries are constructed from the point of view of investments from which their owners hope to receive a fair interest on their capital outlay. No country in the world expects its landlords to be philanthropists in the matter of providing rent-free or cheap rented housing to such of her people as cannot afford to pay the economic rents which are asked for; and although every Government must be expected to provide decent housing for its own low paid servants, the world has not yet reached that socialistic stage where Governments are expected to provide adequate housing for whole populations. At the same time, however, low paid wage earners in crowded and congested industrial areas can hardly be expected to be able to afford the economic rents demanded by the landlords. In such cases there can be only two alternatives—wage levels such as will permit workmen to pay such rents as are asked for or the provision of adequate housing by the employer. The first does not appear to have received much consideration at the hands of industrial employers in India. The second is a lament which has been recited by almost every Commission and Committee that has been appointed in India during the last 25 years to the point of satiation; and although several benevolent and far-sighted employers have endeavoured to provide housing for their workpeople a very small percentage indeed of the total industrial population of India is housed by the employer

and the question of industrial housing continues to be one of the most vexed questions of the country.

The pioneer work in the field of industrial housing has been done by the railways which have spent nearly thirty-five crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by Lord Lloyd, then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls situated at Naigam and Sewri and at DeLisle Road are in fair demand but the majority of the tenements at the Worli chawls continued unoccupied owing to a complaint by the workers that they were situated at considerable distances from their places of work and that the locality offered few of the amenities of city life. The Congress Ministry in Bombay, however, decided to carry out certain improvements in these chawls in order to make them more attractive and comfortable to live in. It was decided to incur an expenditure of ten and a half lakhs of rupees for this purpose of which a sum of four and a half lakhs was to be spent during the year 1938-39 and the remainder in 1939-40. The main improvements to be effected were: changing the position of window shutters in the rooms; provision of weather shades to windows and corridor openings; the placing of teakwood shelves and galvanised iron pipes in each room for drying clothes; additional water storage tanks; provision of electric lights in the corridors of each chawl and also in the rooms of certain chawls for which a charge of Re. 1 per month would be made for consumption of electrical energy, etc. The Government of Bombay have also made arrangements with the Tramways Company to reduce bus fares from one anna to half an anna from Worli to Parel, Curry Road and Mahalaxmi Railway stations. The Municipalities of Calcutta, Bombay, Cawnpore, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers. Perhaps the most magnificent schemes of industrial housing conceived in India are those launched by the Tata Iron and Steel Company Ltd. at Jamshedpur and by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. The Tata Iron and Steel Company has laid out the town of Jamshedpur on Garden City lines, and has provided a further extensive construction in hand. The Empress Mills were housed. The capital cost of town buildings put up by the Company up to 31st March 1939 was about Rs. 129 lakhs. The Company has furnished all quarters carrying a rent of Rs. 15 a month and above with electric lights and fans and has decided to electrify even the lowest rented quarters within the next two or three years. The Company grants

employees for building houses on land leased to them. In 1923, the Empress Mills, Nagpur, obtained from the Government on lease for 27 years extensive land in a locality known as Indora and constructed a Model Village with up-to-date sanitary and other conveniences for its operatives where each worker could own or rent a cottage for himself. Two sizes of plots each measuring 53' x 36' and 53' x 45' are allotted and not more than one-third of the area is allowed to be built upon. Two types of model houses have been built by the mills, houses on the smaller plots costing about Rs. 960 each and those on the larger plots Rs. 1,500 each. Most houses are provided with their own flushed latrines and water taps are laid on in all the houses. Some of the houses built by the Mills have been sold to the workers who pay the cost by easy instalments covering a period of 5 to 7 years while some have been rented to them. Many houses have been built by the workers themselves on plots of land sub-leased to them with moneys advanced to them on easy terms. A large number of the houses have their own gardens and a big garden has been provided in the middle of the Settlement. The Settlement has been provided with good roads, street lights and playgrounds which are equipped with swings, shoots, etc., for children. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided housing for fair percentages of their total staffs but the majority of textile workers in India are not housed by their employers.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work. These principles appear to be generally followed by private companies and concerns as well, especially by coal mine owners in Bihar and Orissa and by tea planters in Assam. All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coal fields has to be licensed and licenses are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses prosecution is initiated. On tea estates quarters in barracks or 'lines' as they are called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible. Large slum clearance programmes have been drawn up by Municipalities and Improvement Trusts in almost all the larger towns and cities in India and much useful work has been done in the last five years by acquisition and demolition.

Conditions of industrial housing in India are the worst in Ahmedabad. A recent enquiry conducted by the Ahmedabad Textile Labour Union into industrial housing in that centre showed that out of a total of 23,706 tenements

observed and studied, 5,669 had no provision of any kind for water and that 3,117 had only a supply of some sort from wells. Those which have the advantage of a supply from municipal sources had one or two taps in an area occupied by 200 or more families. 5,000 tenements had no latrine accommodation and sanitation and drainage was conspicuously absent. The Ahmedabad Municipality has, however, awakened to a realisation of the seriousness of the situation

progress must necessarily be slow but a beginning has already been made. The Ahmedabad Mills Housing Society, a limited liability company launched by the Ahmedabad Millowners' Association, has already built over 600 tenements. The Ahmedabad Municipality put up 100 tenements at a cost of Rs. 50,000 in 1937 while the Majur Mahajan Sangh spent Rs. 75,000 on 125 two-room tenements during the same year.

Royal Commission's Recommendations.—The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. One of the most important of these was to amend the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings. The Government of India introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested.

Rest Shelters, Dining Rooms and Canteens.—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rest shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this little effort has been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West. Pioneer work in this direction has been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company which manages eleven large cotton mills in the City has established large canteens in all their mills. The management in each case bears the salaries of staff and the on-cost for equipment; and hot meals are supplied to the workmen at actual cost. The Company has also established a hostel for women workers. Moderate and vary for a child to Rs. 6 for an adult. The Tata Iron and Steel Company maintain eight restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. The Company has its own plant for the manufacture of ice and soda which are provided free of charge to the employees in the works. A women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge. Communal factors such as the religious prohibition of Hindus to eat their food

in the company of members of other communities, want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult; they are much more so in a country like India where the solution of the problems associated with physical health and social environment is complicated by the evils of ignorance and poverty to which is commonly added a fatalistic outlook arising, it may be, from the low standard of living which has been the experience of so many generations past. Climatic conditions, highly insanitary housing conditions and the illiteracy of the people also contribute to recurring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The wide-spread prevalence of malaria in certain congested areas of the Provinces of Bengal, Bombay and Madras is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets; and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-traiting small ponds and pools or stagnant water, malaria still continues to take a big toll of human life. *Beri-beri* and tuberculosis in Bihar and Orissa, *kala-azar* among the jute workers in Bengal, ankylostomiasis in South India and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts. *Kala-azar* has been steadily gaining ground in Bengal within recent years and the figures for the quinquennium 1932-36 show that the number of cases treated in the medical institutions in Bengal rose from 105,840 to 137,791. The mortality recorded from this disease during 1936 was 68 per cent. above the average for the previous ten years.

The Annual Report on the working of the Indian Factories Act, 1934, for the year 1938 states that the health of factory employees in all Provinces was generally good and there were no epidemics except in the Central Provinces and Berar and the United Provinces where a few outbreaks of cholera were reported. Sanitary arrangements on the whole were satisfactory. In the United Provinces, particular attention was paid to the disposal of effluents from the sugar factories and complaints were less than in the previous year.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nominal character. But wherever control is possible, Government have done much

to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfesting; the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work; the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased; the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker; the provision of suitable and sufficient lighting; the provision of adequate supplies and sources of water both for drinking and for washing; and for the maintenance of sufficient latrine accommodation separately for male and female workers. Remarkable progress has been recorded during the last two years with regard to the installation of air conditioning and cooling plants; progress in this direction was hitherto confined mostly to spinning and weaving sheds but during 1938 and 1939 expansions have been made in other departments as well by installing large hoods and trunks harnessed to powerful exhaust fans, to enable the steam to be drawn away from sizing cylinders. Attempts are also being made to reduce dirt to a minimum and many cotton mills have installed special plants to carry the dust away.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of local Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trust also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter of maintaining establishments, mills, mines, engineering workshops, tea plantations, etc.—maintain fully equipped dispensaries in charge of whole or part-time qualified medical officers.

It is of considerable interest to observe that the Municipality of Bombay initiated a scheme in the year 1939 for the free distribution of milk to undernourished children attending Municipal

Schools in the City of Bombay. A sum of Rs. 50,000 was sanctioned for this purpose in the budget estimates of the Municipality for the year 1939-40 and this was increased to Rs. 90,255 in the estimates for 1940-41. All children entering the Infant Class for the first time are examined and those that are found to be suffering from malnutrition are given 6 ounces of milk every day free of charge. 2,373 children were in receipt of this benefit when the scheme was started in March 1939. The number of children who were in receipt of the benefit as at 31st March 1940 was 4,091.

Maternity Benefits.—A Bill introduced by Mr. N. M. Joshi in the Legislative Assembly of the Central Government in 1924 to provide for the payment of maternity benefits in certain industries was thrown out by the Assembly in August 1925, but the Governments of Bombay, Bengal, Madras, the United Provinces, the Central Provinces, Sind and Delhi have passed their own Maternity Benefit Acts. The Bombay Act was amended in 1934 in such a way as to be of greater benefit to the persons concerned. Under these Acts, all women workers employed in factories are to be compulsorily rested for three to four weeks before child birth and for four weeks after child birth and employers are required to pay them a benefit amounting to about half their usual pay during this period. During the year 1938, the Government of Bombay extended the operation of their Maternity Benefits Act to women employed in all industrial concerns in the Province. The Bombay Municipality started a maternity benefit scheme for its *hulalkhane* and scavenging women in 1928. By this scheme, the classes benefited receive a benefit of leave on full pay for a period not exceeding 42 consecutive days. In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During periods of advanced pregnancy and after child birth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at child birth is often granted in addition. This bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company and the Assam Oil Company grant six and three months' leave respectively on half pay. Several estates in the Coimbatore District of the Madras Presidency either pay lump sum bonuses in lieu of pay or feed the women concerned for a few weeks before and after confinement. Planters in Madras decided, early in 1939, to pay a bonus and bear charges in connexion with the free feeding of the mother for periods of three weeks each before entry into and after leaving hospital. Provincial Factory Administration Reports for the Bombay Presidency record that the Bombay Maternity Benefit Act is having a restrictive influence on the employment of women in factories, particularly in Ahmedabad.

Provisions of crèches.—One of the many additional principles introduced in factory legislation in India by the Indian Factories Act of 1934 was one for the compulsory provision in all factories wherein more than fifty women workers are ordinarily employed of a suitable room for the use of children under the age of six years belonging to such women and for the supervision of

the children in such rooms (or crèches) in accordance with rules to be framed by local Governments in the matter. Crèches are, however, not a new feature in Indian industry. Several textile mills in Bombay, Ahmedabad and Sholapur have provided them for over fifteen years and in many of these the children were looked after by qualified *dais* (Indian midwifery nurses) and were clothed and fed at the expense of the mill-owners. The Government of Bombay had also made provision for the adequate supervision of these crèches by the appointment of a lady Inspector of Factories as early as 1924. Crèches were also provided by several textile mills in other centres and in the factories attached to many of the larger tea plantations in Assam.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one; and, that in spite of the statutory requirements which factory and mine owners are bound to observe, the education of the workers in the matter of accident prevention is both necessary and desirable. Under the direction of the Railway Board of the Government of India all railways in India have undertaken extensive schemes of safety-first propaganda. These include the putting up of safety posters and safeguards both in English and in the vernacular of the district at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety-first committees in the larger workshops. The Millowners' Association, Bombay, has done considerable good work of a pioneering character in connection with Safety-First. In conjunction with the Factory Department and the Bombay Millowners' Mutual Insurance Association it has posted attractive safety-first posters in all cotton mills in Bombay City. In conjunction with the St. John's Ambulance Association it started classes in 1931 for first aid training. These are attended by large numbers of workers from many cotton mills in the city. Working in conjunction with the Safety-First Association of India, the Association has now drawn up a Safety Code for the Cotton Textile Industry and this Code is expected to be published and put into operation about August 1940. Several other large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and the Tata Iron and Steel Works at Jamshedpur, to mention only a few, are with railways, pioneers in the field of organisation of 'safety-first' measures. It is of interest to note that most of these organisations have also established end of the year

all Provinces in India do all they possibly can in improving safety measures in factories. As a result of these endeavours, automatic or fixed guards have been provided in metal stamping and pressing machinery in Bombay; special attention was paid to the breaking of overhead belts in the Central Provinces and Berar; safety locking devices were suggested to the makers of machines in the Punjab; and the importance of wearing tight-fitting clothing by the workers was impressed on factory managers in Madras, Sind and the United Provinces.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (i.e., accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a local Government, even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Prior to the passing of the 1934 Factories Act, some of the local Governments had framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing over 500 operatives. Section 32 (b) of the 1934 Act, however, makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by local Governments in the matter.

The All-India Factories' Report for the year 1938 states that the number of recorded accidents increased from 28,323 in 1937 to 33,494 in 1938. Fatal accidents decreased from 215 to 210 but serious and minor accidents increased from 5,343 and 22,765 to 6,064 and 27,220 respectively. The incidence of all accidents per 100,000 operatives employed rose from 1,554 to 1,927 during 1938. Generally speaking, the

increase was due to the increase in the number of persons employed, carelessness of the workers and to better reporting. The influx of untrained men into industries and deterioration in general supervision in night shifts were said to be contributory causes for the increase in Bombay.

UTILISATION OF THE WORKERS' LEISURE.

The Industrial Disputes Committee (the Stanley Reed Committee), appointed by the Government of Bombay in 1922 to enquire into the causes of the wide industrial unrest prevalent about that time and to make recommendations, were, *inter alia*, of opinion that employers should organise extensive schemes of welfare particularly with regard to the proper use of workers' leisure, in order to keep the workmen both contented and happy and out of mischief. In pursuance of the Committee's recommendations in the matter several cotton mills and groups of mills in the Bombay Presidency—notably the Currumbhoy Ebrahim group of mills, the Sholapur Spinning and Weaving Mills and the Tata Mills—inaugurated wide schemes embracing facilities for education and recreation. All these groups formed special welfare institutes and placed them under the charge of special welfare officers. Much good work was done but with the depression in trade which followed coupled with the financial difficulties in which many of these mills were involved most of the excellent schemes that had been established were either severely curtailed or abandoned. During the last few years, however, many large groups of employers in the cotton textile industry in India have inaugurated wide schemes of welfare work for the benefit of their employees. Among the more prominent of these groups those that deserve special mention are the Buckingham and Carnatic Mills in Madras, Messrs. E. D. Sassoon & Company who are the Managing Agents for eleven mills in Bombay, the Empress Mills at Nagpur, the Gokak Mills at Gokak and the Elgin Mills at Cawnpore. The pioneering work in the field of recreational facilities is being done by the railways. All railway systems have established sports clubs and institutes at suitable distances and places for the recreation of their employees. The railways provide land, buildings and equipment and the institutes are run by the members themselves from their own subscriptions. In certain cases separate club houses and institutes are provided for officers, for non-gazetted Europeans and Anglo-Indians and for Indians and in a few cases for the lower types of workmen as well. All forms of sports and recreation are indulged in at these institutes and railway hockey and football teams are among the best in India.

Almost all the larger labour employing organisations such as the Bombay Port Trust, the Burma Shell Corporation, the bigger municipalities, the Tata Iron and Steel Works at Jamshedpur, the British India Corporation in the United Provinces, the Empress Mills at Nagpur, etc., have devised wide welfare schemes and in many cases these are under the charge of special welfare or labour officers. In some cases grants-in-aid are given to such outside organisations such as the Young Men's Christian Association, the Kirkee Education Society, the Social Service League, etc., to take

charge of certain sections of welfare activities particularly with regard to recreation and the education of both workers and workers' children.

With the advent of Provincial Autonomy in India, the Governments of several Provinces have taken active measures to supplement the welfare and recreational activities undertaken by employers for the benefit of their workpeople by initiating large welfare schemes of their own. The Governments of Bombay and the United Provinces took the lead in this direction by setting aside sums of Rs. 1,20,000 and Rs. 10,000 respectively in their budget estimates for the year 1938-39 for "industrial welfare." The amounts provided for this purpose in the estimates for the years 1939-40 and 1940-41 were Rs. 1,00,000 and Rs. 20,000, and Rs. 1,77,600 and Rs. 30,000 respectively. The allotments for Bombay included sums of Rs. 20,000, Rs. 59,000 and Rs. 45,000 for the years 1938-39, 1939-40 and 1940-41 respectively for the purpose of building recreation centres. Labour welfare activity by the Government of Bengal in past years consisted mainly in giving grants-in-aid to schools, libraries and day nurseries catering exclusively for labourers. Following the lead given by Bombay and the United Provinces in the matter, the Government of Bengal have also made a provision of Rs. 20,000 in their budget estimates for the years 1939-40 and 1940-41 for the financing of welfare centres. In the Central Provinces, a proposal submitted by the Labour Sub-Committee of the Provincial Congress Committee for a Labour Welfare Scheme to be run by Government as an experimental measure is reported to be under the consideration of Government. In Bihar, a certain amount of welfare work is undertaken by the Jharia Mines Board of Health.

The first beginning in Bombay was made by Mr. Ramnath Podar, Managing Director of the Toyo Podar Mill, who contributed a sum of Rs. 25,000 for the building of a recreation centre at DeLisle Road in Bombay City. This centre started functioning in March 1939. Government Welfare Centres in the Province of Bombay are divided into four types: "A," "B," "C," and "D" according to the type and extent of the activities provided and the times at which they are open. The scope of the work in the "A" type centres is of a very comprehensive character and covers almost all forms of outdoor and indoor recreational activities; periodic cinema and dramatic performances and *bhajan* parties; the running of reading-rooms, libraries, canteens and restaurants; the organisation of debates, magic lantern and other lectures and many types of educational classes; the provision of radios, add-a-grams, nursery schools, medical aid and advice in health and maternity, etc. The "A" type centres are open from 8-30 to 11 in the mornings and from 5 to 9-30 in the evenings for men and boys and from 1 to 4 in the afternoons for women but the nursery school section supervised by a full time lady teacher is open at each centre from 8 a.m. to 5 p.m. The "C" type centres are open from 7-30 to 10-30 a.m. and from 6 to 9 p.m. for men and boys and a limited sphere of activity in holding of literacy and sewing classes and the conduct of indoor games for women is conducted from 1 to 4 p.m. Two additional full-fledged "A" type centres at Worli and Naigam started functioning from 1st June 1940 and a total num-

ber of ten "C" type centres have been opened in various other localities during the last twelve months.

"C" type centres mainly cover indoor recreation and reading rooms. The "D" type centres will only cover outdoor recreation and the Municipality of Bombay has consented to place at the disposal of Government ten open spaces in Bombay City for this purpose. Two "C" type centres have been opened in Ahmedabad and an "A" type centre is to be opened shortly as soon as the construction of a recreation pavilion has been completed. Similar centres are also to be opened at Sholapur, Viramgam, Hubli and Nadiad. Mr. C. G. S. Ram has been appointed Labour Welfare Officer and Miss P. G. David, Lady Welfare Worker. These two Officers are assisted by a large staff of both full time and part time men and women welfare officers. The whole scheme is under the personal direction of Mr. Gulzarilal Nanda who is the Honorary Commissioner for Amenities to Industrial Labour.

The Government of the United Provinces have opened five welfare centres in Cawnpore and one each at Lucknow, Hathras and Firozabad. Each centre provides facilities for free medical aid, a reading room and library and some indoor and outdoor games. Each centre is in charge of a full time staff consisting of an organiser, an assistant organiser, a medical officer and a compounder. The doctor visits patients at home free. Arrangements have been made with the Indian Tea Market Expansion Board to run a tea stall at each centre where the workers are served tea free of charge. The Tea Board has supplied a Radio and an add-a-gram to each centre. As in Bombay, cinema and dramatic performances are held periodically and debates, lectures and literary and sewing classes are held as a regular feature of a Centre's activities. "Better Living Societies" have been organised at each welfare centre and these have been registered under the Co-operative Societies Act. These societies are autonomous bodies with properly elected managing committees and their function is to help to clean up the *ahutias*, settle individual disputes and develop personal hygiene by means of talks, lectures and debates.

In the last two years the Government of Bengal have opened twelve welfare centres in localities inhabited by industrial workers in the City of Calcutta and Howrah. The administration of these centres is at present in the hands of the Labour Department but it is proposed to set up local non-official managing committees for the purpose. It has not yet been possible to undertake any extensive programmes of work at these centres the activities of which at present are concentrated on the welfare of workers' children, day nurseries for their children and the organising of lectures on health and hygiene and other matters of topical interest. It is proposed to open more labour welfare centres in the industrial areas round about Calcutta and to revitalize the existing centres through direct and personal contact of labour officers. In addition to the present activities those contemplated include gymnasia, indoor and outdoor games, cinema shows, installation of radio sets and the organising of volunteer corps for social work.

As far as education is concerned, the railways are again pioneers in the facilities provided

both for the education of their illiterate staffs and for the children of different classes of railway employees. The N. W. Railway has started three experimental schools for adult workers in the locomotive sheds at Lahore, Sibsar and Kotri. The experiment is confined to locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway has provided nearly 40 schools for the employees of the operative department. The B.B. & C.I. Railway have six schools for imparting instruction in the three R's and as an inducement to study a bonus of Rs. 5 is paid to each man passing a simple test. With regard to the children of railway employees, in addition to about

100 schools for European and Anglo-Indian children, all the railway systems in India maintain a total of nearly 160 schools for Indian children at a cost of over two lakhs of rupees per annum. These schools are attended by over 20,000 children. The Railway Board also gives grants amounting to about Rs. 50,000 per annum to aided schools for Indian children. These are attended by 10,000 children of Indian railway employees.

In Bombay, the Municipality has introduced compulsory education in all the wards of the City. The Social Service League maintains several night schools and a Textile Technical Institute at Parel for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. also conducts several night schools.

COST OF LIVING AND STANDARD OF LIFE.

COST OF LIVING.

Bombay was the first Province in India to compile and publish figures for measuring the cost of living. A monthly cost of living index for working classes in Bombay City compiled by the Bombay Labour Office on the aggregate consumption method with July 1914 as the base was regularly published in the *Labour Gazette* from September 1921 to June 1937. The scope and method of the compilation of that index are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. A base prior to the World War of 1914-18 has, however, recently come to be regarded the world over as being somewhat out of date for this purpose and several countries have been compiling cost of living index numbers in relation to a later year. Most of these index numbers are now compiled with weights which are proportional to the relative expenditure on the different items which find a place in an average worker's family budget. The Labour Office of the Government of Bombay conducted a comprehensive family budget enquiry in Bombay City between September 1932 and June 1933 and taking the prices during the year ending June 1934 as a basis it commenced the publication of

a new series of index numbers for Bombay City with weights based on the results of that enquiry as from July 1934. A full note on the method used for the compilation of the new index has been given at pages 779 to 785 of the issue of the *Labour Gazette* for June 1937. Whereas the old index covers 24 items divided into four main groups I, Food (17 items); II, Fuel and Lighting (3 items); III, Clothing (3 items); and IV, House Rent. The new index has been made as comprehensive as possible by expanding the list of commodities covered and adding a new group for "Miscellaneous expenditure" which did not find a place in the old index. The new index covers 44 items divided into five groups: I, Food (28 items); II, Fuel and Lighting (4 items); III, Clothing (6 items); IV, Miscellaneous (7 items); and V, House Rent. The following two tables give the cost of living index numbers for working classes in Bombay City for the months of January, April, July and October in each year firstly with July 1914 as the base from January 1915 to April 1937 and secondly with July 1933 to June 1934 as the base from July 1934 to April 1940:—

Bombay Working Class Cost of Living Index Numbers.

TABLE No. I.

(July 1914=100.)

Year.	January.	April.	July.	October.	Annual average.
1918 ..	134	144	149	175	154
1919 ..	182	167	186	174	175
1920 ..	183	172	190	193	183
1921 ..	169	160	177	183	173
1922 ..	173	162	165	162	164
1923 ..	156	156	153	152	154
1924 ..	159	150	157	161	157
1925 ..	157	153	157	153	155
1926 ..	155	153	157	155	155
1927 ..	156	153	156	151	154
1928 ..	154	144	147	146	147
1929 ..	149	148	148	148	149
1930 ..	147	140	139	131	137
1931 ..	117	111	108	108	110
1932 ..	110	108	109	109	109
1933 ..	109	101	103	100	103
1934 ..	96	93	97	100	97
1935 ..	98	98	101	103	101
1936 ..	103	100	101	103	102
1937 ..	104	104

TABLE NO. II.
Average Prices from July 1933 to June 1934=100.

Year.	January.	April.	July.	October.	Annual average.
1934	97	100	99
1935 ..	99	98	101	101	100
1936 ..	103	100	101	102	101
1937 ..	104	105	107	108	106
1938 ..	107	105	106	105	106
1939 ..	105	103	105	108	106
1940 ..	114	110

It will be noticed that although the base periods and the methods used in the compilation of the two different sets of index numbers given above are totally different, the actual index numbers for the same dates in the two series are strikingly similar.

Working class cost of living indexes for scope and method of compilation of the index Ahmedabad and Sholapur compiled on a post-war basis have been published in the *Labour Gazette* month by month since the beginning of the year 1928. The bases of these indexes are the results of the family budget enquiries conducted at these two centres in the years 1926 and 1925 respectively. Details regarding the annual averages—for the years 1928-1940.

Ahmedabad Working Class Cost of Living Index Numbers.
(August 1926 to July 1927=100)

Year.	January.	April.	July.	October.	Annual average.

1940 ..	80	74

Cost of living index figures are now being compiled and published by Burma and various other Provinces in India. The Government of Burma compiles index numbers, on base 1931=100, for four classes of industrial workers in Rangoon: Burmans, Tamils, Telegus and Oriyas; Hindustanis and Chittagoians. The Government of the Central Provinces and Berar compiles two separate sets of figures for Nagpur and Jabulpore with January 1927 as base. In the Province of Madras there is only one series compiled for Madras City with the average prices

from July 1935 to June 1936=100. The Government of Bihar compiles cost of living figures with the average cost of living for the five years preceding 1914 as base for six centres in the Province: Patna, Muzaffarpur, Monghyr, Jamshepur, Jharia and Ranchi. The Government of Orissa compiles similar index numbers on the same basis as Bihar for its headquarters town of Cuttack. The Government of Punjab also has a series for Lahore with 1931-35 as the base. In the United Provinces, fortnightly cost of living index figures with the prices on 6th August 1939

=100 have been compiled since January 1940 for the City of Cawnpore. These figures are as follows:—January 14th and 28th—112; February 11th—112, 25th—109; March 10th and 24th—110; April 7th—109, 21st—110; May 5th—109, 19th—108. In the following table we set out the cost of living index numbers for each month in 1939 and for as many months in 1940 for which figures are available for Madras, Lahore, Nagpur, Patna, Cuttack and for Burmans in Rangoon.

Cost of Living Index Numbers in Provinces other than Bombay.

STANDARD OF LIFE.

The results of family budget enquiries conducted by what is known as the 'extensive method' form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, of an improved standard of living. Labour Office has conducted enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1927 and 1933 respectively. As has already been said, similar enquiries have also been carried out at Ahmedabad and Sholapur cities and the results

of both these enquiries were published in the year 1928. In Burma, the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and in the Central Provinces with the compiling cost of living indexes. In the case of the former Province proved futile and that Province is not therefore at present compiling any such index.

comparative data regarding the expenditure will serve to standards of life of working classes at different centres in India:—

Percentage Distribution of Expenditure.

Groups.	Bombay (1932-33).	Ahmedabad (1933-35).	Sholapur (1925).	Nagpur (1927).	Jubbulpore (1927).	Rangoon (1928).	Madras (1938).
Food	46.60	49.31	49.25	64.10	66.00	52.7	52.63
Fuel and light	7.11	6.65	9.60	9.62	7.95	5.2	6.67
Clothing	7.75	9.12	11.86	10.70	10.86	10.6	4.50
House rent	12.81	10.97	6.27	1.92	1.44	13.9	11.14
Miscellaneous	25.73	23.95	23.02	13.66	13.75	17.6	25.06
Total	100.00	100.00	100.00	100.00	100.00	100.0	100.00

NOTE.—The figures are not strictly comparable due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection :—

—	Bombay.	Ahmedabad.	Sholapur.	Nagpur.	Jubbulpore.	Rangoon (Burmese).	Madras.
Average size of the family (in persons) ..	3.70	4.05	4.57	4.33	3.76	3.01	6.03
Average monthly income ..	Rs. a. p. 50 1 7	Rs. a. p. 46 5 0	Rs. a. p. 39 14 10	Rs. a. p. ..	Rs. a. p. ..	Rs. a. p. 58 8 3	Rs. a. p. 37 5 11

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour have made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act, 1936 to which reference has been made in an earlier section, is a measure intended to secure to the workmen prompt payments of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have under consideration certain other pieces of legislation which are also designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission, the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission is that at least so far as industrial workers in receipt of wages or salary

amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments have decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitney Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various local Governments on this question, the Government of India came to the conclusion that central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Act in 1934 which makes besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But, unfortunately, the motion for the reference of the Bill to a Select Committee was lost.

WAGE RATES AND EARNINGS.

The only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay for the Province of Bombay. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to-day little or no definite information regarding rates of wages is available for any province outside the Province of Bombay. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages and in the reports of Courts of Inquiry appointed under the Indian Trade Disputes Act or in the reports of Provincial Committees appointed by certain Local Governments to enquire into wages and conditions of employment of workers in the cotton textile industry. Some of the annual factory administration reports published by

the Provincial Governments in India contain remarks about prevalent wage rates but these relate only to certain units and they can by no means be considered as being the dominant rates at any one time for any particular industry or area. The annual Mines' administration reports also contain figures for daily earnings for certain main occupations in representative mines in the provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every commission and committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923, 1926, 1933 and 1937 into the wages of cotton textile mill workers in the Province of Bombay—an enquiry into agricultural wages covering a period of twenty-three years from 1900 to 1922, an enquiry into the wages of peons in Government and commercial offices in 1922; enquiries into the wages of all municipal employees in the Province in 1924, of clerical employees in

good attendance and efficiency bonuses and to deductions for percentage cuts. Thirdly, frequent changes are made in the basic units of time for which rates are fixed; e.g., rates which are monthly or daily may be changed into daily or hourly rates. Fourthly, almost all the principal occupations in Government and railway concerns and in the Industrial establishments of public and local bodies are divided into several grades and sub-grades. The basis of the grading in all cases is arbitrary and varies widely between the different administrations. Fifthly, vacancies are seldom if ever filled on the same rates as those paid to the workers who have left. In such cases advantage is usually taken to lower rates and the wages offered to new entrants depend more on their personal ability and degree of competence and also on the rates prevalent in other similar concerns and the supply of the type of labour required. The factors of personal competence and the capacity of bargaining power are the most important considerations in wage fixation. The first varies widely between individual and individual among Indian

workers and whereas a minority in all occupations may be thoroughly efficient, the same cannot be said of the majority. The second depends upon densities of industrial populations in particular locations. Lastly, rates vary widely between town and mofussil in the case of the semi-skilled and unskilled operations. But, this variation operates within narrower limits for the more skilled occupations in which the really competent men are able to command their due anywhere. In view of these several

diversely varying factors it is impossible to give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre. The compiler of this note, however, has had a wide experience of wages in India and the following figures quoted by him give an approximate idea of the predominant rates for fairly efficient workers in certain of the more important occupations in all sections of Indian industry:—

Occupations.	Most usual period of payment.	Rates in		
		Cities.	Towns.	Mofussil.
		Rs.	Rs.	Rs.
Foremen (European)	Monthly	500 to 700	400 to 600	350 to 550
„ (Indian)	„	250 to 400	150 to 300	150 to 250
Chargemen	„	150 to 250	100 to 225	75 to 200

MOVEMENTS OF WAGE RATES.

The only satisfactory criterion on which to base any broad conclusions regarding movements of wage rates in any industry in any industrial area or centre in India would be to

take the total wages bills for equal numbers of workpeople in the same or similar occupation groups at any two dates and to ascertain the percentage increase or decrease between the two sets of figures. Attempts made by the Bombay Labour Office to do this during it

enquiries in connection with the General Wage Census were largely frustrated owing to the existence of irreconcilable variations of principle and considerable diversity in practice not only as between unit and unit but also in the same unit as for example in the cotton textile mill in Ahmedabad which had been dealt with above. The comparisons which employers most need to-day are those with 1914, or, in other words, with the pre-war year. All the pay and muster rolls for that year were, however, destroyed long ago but most units in the textile industry in Bombay have their 'basic' time and piece rates from which they calculate the earnings on which the percentage dearness of food allowances are computed.

References have often been made in this note to the dearness allowances of 80 per cent. for weavers and of 70 per cent. for all other operatives granted in the textile mills in Bombay City until the middle of 1933 when the Bombay Millowners' Association permitted its individual affiliated members to take independent action in the matter of reducing these allowances. The stages by which these allowances came to granted were as follows: January 1918—15 per cent.; January 1919—raised to 35 per cent.; February 1920—raised to 75 per cent. for weavers and to 55 per cent. for all other operatives; November 1920—raised to 80 and 70 per cent., respectively. These allowances were on the "basic" rates of 1914 or of some other year between 1914 and 1917—rates which were not only not standard for all mills in Bombay City but which actually varied widely as between mill and mill. For example, the results of the 1926 enquiry conducted by the Bombay Labour Office showed that in the 19 mills selected for the enquiry in Bombay City the average earnings (from basic rates plus allowances) of two loom weavers varied between Rs. 1-9-1 and Rs. 2-1-6 per day, of sizers between Rs. 0-14-3 and Rs. 1-2-11 per day, of warpers between Rs. 1-10-3 and Rs. 2-14-0 per day and for women grey winders between annas 8-3 and annas 15-5 per day. Notwithstanding these wide variations it is, however, possible to state that wage levels in any particular textile mill in Bombay City were, on the whole, about 70 per cent. higher than in the year 1914 at the beginning of the year 1933. During the latter half of 1933 and in the beginning of 1934 all mills in Bombay effected considerable cuts in the dearness allowances and in some cases also in the basic rates. If a later year be taken for purposes of comparison, say 1926, when the Bombay Labour Office made a thorough survey of prevalent rates, the results of the General Wage Census which was conducted for cotton mills in Bombay City for October 1934 showed that wages in the Bombay mills, for all occupations, as compared with July 1926 were lower by 16 per cent. in October 1934. If the twelve most numerically important "process" occupations which cover approximately 70 per cent. of the total number of workpeople employed in the industry are taken and if the figures for these are compared with the figures for the same occupations in 1926, the reduction in wages in October 1934 amounted to 23.79 per cent. and in July 1937 to 25.40 per cent.

In Ahmedabad the war or dearness allowances paid in textile mills in that centre varied widely for different occupations and a general comparison with the pre-war year is therefore not possible; but, as compared with 1926, wages in May 1934 were 4.4 per cent. higher. This however, was neutralised by the cut of 6½ per cent. which was brought into effect from 1st January 1935. Again, if the most numerically important occupations alone are considered wages in cotton mills in Ahmedabad were 5.20 per cent. higher in May 1934 than in May 1926. In July 1937 wages were 8.40 per cent. lower.

In Sholapur, the increases in wages granted by individual mills between 1916 and 1919 were consolidated with the rates prevailing in 1914. At the beginning of 1920, the Sholapur mill-owners gave their first separate dearness allowance in the form of wages in kind—certain quantities of grain—to all those workers who did not remain absent for more than four days in a month. Workers who failed to put in the required attendance were deprived of this benefit and the agitation of both these and the to the Sholapur allowances in rates of 1919 to weavers and of 30 per cent. to all other operatives. The value of the grain allowance varied with fluctuation in prices. The existence of several conflicting factors in the wages position in Sholapur prevents the estimate of an accurate comparison with 1914; but, as compared with 1926, wages in July 1934 were 20.5 per cent. lower. Taking the twelve most numerically important occupations, wages in cotton textile mills in Sholapur were 14 per cent. lower in July 1934 and 13.3 per cent. lower in July 1937 as compared with July 1926.

The all-round effect of the Interim Recommendations of the Bombay Textile Labour Inquiry Committee which were accepted by all cotton mills in the Province of Bombay was that the total wages bill in the industry was increased by about 12½ per cent. or by nearly a crore of rupees per annum. Similar increases were granted in cotton mills in the Central Provinces and Berar, in Cawnpore and in Coimbatore.

Owing to the lack of the necessary data for the purpose, similar comparisons for other industries and for other provinces are not possible.

The agitation started by the workers in almost all industries in India between January and June 1940 for the grant of dearness allowances to neutralise the rise in prices which came about after the outbreak of war in September 1939 led to employers granting increases ranging from approximately 7½ to 12½ per cent. This question has already been dealt with in an earlier note in this section.

EARNINGS.

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well-being of the masses, provided however that the term "earnings" has one uniform meaning in its computation

and application. In practice, the connotation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings; (2) net earnings; or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. Let us explain. "Gross earnings" for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances bonuses and perquisites—or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or grain allowances or allowances for overtime work. Bonuses may be for good attendance and/or for efficiency. Perquisites may be in the form of free housing, travelling allowances, free medical attendance, free railway passes, etc. "Net earnings" are gross earnings less deductions for fines. "The amount in the pay envelope" is net earnings less any further deductions which may be made by an employer for, house rent, medical attendance, subscriptions to provident funds, income-tax, refunds of advances, payments for purchases from co-operative stores or cheap grain or cloth shops, repayments of loans from provident fund accounts or from co-operative credit societies, subscriptions to sports clubs or institutes, etc. The amount in the pay envelope can never be reckoned as earnings because every worker is expected to pay for his income-tax, house rent and purchases and to liquidate his other liabilities and debts from his income. In all cases where fining is widely prevalent gross earnings can also not be reckoned as income because these may be habitually liable to deductions for fines. "Net earnings" would most correctly approximate to earnings for statistical purposes. Sufficient has been stated to show how difficult the computation of "earnings" can be. Different statisticians and different bodies hold different views as to its correct computation and that is the reason why the term "earnings" is so widely interpreted. The most frequent and general usage of the term for statistical purposes is to take gross earnings in cash less fines and without evaluating such perquisites as free housing, free medical attendance and free railway passes in the case of railway workers, and to include travelling allowances where these are paid for conveyance between place of work and home but not when they are paid for transport to some other temporary sphere of work. This is the basis on which figures for "earnings" were collected by the Bombay Labour Office for the purposes of the General Wage Census; and, subject to minor modifications, for its other enquiries into wages. It is of the utmost importance that in the conduct of every enquiry into wages, all the persons who are entrusted with the work of filling up the required returns should have a clear and thorough conception as to what should or should not be included in "earnings."

Two sets of figures may be compiled for "earnings": (1) *average daily earnings* ascertained by dividing the total earnings for a group of workers in any occupation by the total of the

number of days actually worked by all the individuals in the group; and (2) *average monthly earnings* ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average daily earnings by the weighted average less the figure for average absence as shown by the figures for average percentage attendance for the group. *Average percentage attendance* is the percentage ratio of the total number of days actually worked by all the individuals in a group to the possible working days in the pay period for the group.

Part I of the General Wage Census covering all perennial factories in the Province of Bombay covered nearly a thousand occupations in nearly twenty industries. For the purposes of the census the Province of Bombay was divided into ten territorial areas and the reports contain the averages of daily and monthly earnings for all monthly paid workers in all the occupations concerned in each of these ten areas. It is obviously not possible for us to reproduce the figures here but for purposes of general interest we give below (1) the averages of monthly earnings for six of the most important occupations which are to be found in all factories, but particularly in the cotton textile mills; (2) the general averages for all engineering and all electrical engineering; (3) the averages for all printing presses; (4) the general averages for all operatives in all printing presses which are factories for the purposes of the Indian Factories Act in the Bombay Presidency; (5) the average daily earnings in the more numerically important occupations in the cotton textile industry for 1934 with the increases recommended by the Bombay Textile Labour Inquiry Committee in their Interim Report which was published in February 1938 and which were accepted by all Cotton Textile Mills in the Province and also the amounts granted as dearness allowances in centres where such increases were granted; (6) the average daily earnings in the same occupations in July 1937 in cotton textile mills in Bombay, Ahmedabad and Sholapur as published in the Committee's Interim Report with the recommended increases and the dearness allowances again added to the published figures; and (7) the general averages of daily earnings for all male and women operatives for the whole of the Province of Bombay for all factory industries in Bombay excluding the Textile, the Engineering and the Printing Industries. The figures in brackets in the first, the third, the fifth, the sixth and the seventh tables show the numbers of workers covered by the averages to which they relate.

N.B.—The note under Table I applies in the case of this Table also.

The Reports of the Central Provinces and Berar Textile Labour Inquiry Committee and the Coimbatore Court of Inquiry which were published during the year 1938 give the figures of average earnings in individual mills in various centres but no general figures for the centres as a whole. For further detailed information regarding wages in these areas the reader must refer to the reports indicated as it is not possible to reproduce figures for individual units in this note.

WORKMEN'S COMPENSATION.

Under the ordinary common law an injured workman is entitled to recover damages or compensation for an injury sustained by him in the course of his employment if the injury is proved to have been caused by the personal negligence of his employer. In addition, the Indian Fatal Accidents Act of 1855 permitted the award of damages to the dependants of a deceased workman if the accident resulting in his death was due to the wrongful act, neglect, or fault of the person responsible for the accident. The procedure in connection with the recovery of damages under both the common law and the Fatal Accidents Act was, however, extremely cumbersome. This together with the ignorance and the illiteracy of Indian workers and their financial disability in undertaking extensive litigation had placed them in a very disadvantageous position in suits for compensation. Moreover, with the growing industrialisation of the country, accidents were annually becoming more numerous than before and, in their result, were responsible for considerable hardship on the workers and their families. Disabilities similar to these had been removed in most of the industrialised countries of the world by the passing of workmen's compensation laws providing for easy and speedy relief to workmen injured as a result of industrial accidents and to their dependants in cases where the accidents resulted in death. The necessity for such legislation in India was obvious and the Government of India drew up proposals for a Workmen's Compensation Act which they circulated to all local Governments in 1921. The proposals met with a fair measure of approval and the Government of India drew up a Bill which they introduced in the Legislative Assembly in September 1922. After its reference to a Select Committee, the Bill was passed in March 1923 and the Indian Workmen's Compensation Act was brought into operation with effect from the 1st July 1924. This was the first piece of legislation in the field of social insurance in India.

In its main principles, the Indian Act follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act and classes of workers.

Act of 1923 fell far short of

it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands to-day covers over seven million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negligence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where the accident is not directly attributable to misconduct, breaches of rules

or orders or disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident; provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning, (2) chrome ulceration or its sequelae, and (3) compressed air illness (Caisson Disease) or its sequelae.

The Royal Commission on Indian Labour made a long series of recommendations for the improvement of the Act; firstly, to extend its scope so as to cover all types and classes of workers who were likely to be most affected by the increased risks of modern industry; secondly, to enhance the scales of compensation payable and to facilitate the method for their payment; and, thirdly, to effect various changes designed to improve the administration of the measure. It is not necessary for the purposes of this note to trace the evolution of the legislation in connection with workmen's compensation in India since the passing of the first Act in 1923 and it will be more useful if we gave the main provisions of the Act as it stands to-day.

MAIN PROVISIONS OF WORKMEN'S COMPENSATION ACT.

Classes of Workmen Covered by the Act.—

These have been specified in the definition of the term "workman" contained in section 2(1) (a) and in Schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 are excluded. Speaking broadly, the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings to be or which are of more than one storey or of twenty feet in height or of dams, embankments, roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canal pipe lines or sewers; the fire brigade; railway mail service; operations for winning natural petroleum or natural gas; blasting operations and excavations; ferry boat services; cinchona, coffee, rubber or tea plantations; electricity or gas generating stations; lighthouses; cinematograph picture producing and exhibiting; divers; elephant and wild animal trainers and keepers and salaried motor drivers and chauffeurs. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. As far as seamen are concerned, both seamen on ships registered in India and those on ships

registered in foreign countries are included. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Governor-General in Council is empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature.

Amounts of Compensation Payable.—The amount of compensation payable depends on the average monthly wages of an injured or deceased workman. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused.

(NOTE: *Permanent total disablement* means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependants.—These are defined in two categories: firstly, those who are in practically all cases actually dependants; and secondly, those who may or may not be in that position. The first includes a wife, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a husband, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General.—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer

admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Local Governments. The Provinces of Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead—(1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in British India were generally agreeing as to the inequity of the doctrines. They have been such as to leave it open to employers in most Provinces to have recourse to them. The Government of India introduced a Bill in the Central Legislative Assembly on the 15th August 1938 to declare that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression "monthly wages" which has now been defined to mean the amount of wages deemed to be

payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves any doubt as to whether a workman employed on wages payable otherwise than by the month or on a monthly basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions 2 and 3 Geo. 6. C. 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act. The second amendment referred to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could

be made under the said Act and that the Provincial Government certifies that the application was rejected.

STATISTICS OF WORKMEN'S COMPENSATION.

The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the original Act came into force. These statistics show that in the period of thirteen and a half years from July 1924 to December 1937 (the Statistics for the year 1938 had not been published when we went to press in July 1940 for this edition of the Year Book) the total amount of compensation paid amounted to over 138 lakhs of rupees in 248,402 cases. The following table shows the number of cases, classified by nature of injuries and the amounts of compensation paid in each year since 1924 :—

Workmen's Compensation Statistics—All-India, 1924-37.

* The figures for 1924 relate only to the six months from 1st July to 31st December.

EFFECT ON INDUSTRY.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*Vide* para. 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance but there can be no denying the fact that the introduction of workmen's compensation has helped considerably to improve the standard of safety in the country. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India

deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

The report for the year 1937 states that, as in the previous years, a few trade unions were reported to have assisted their members to obtain compensation. In the Province of Bombay, the Textile Labour Association, Ahmedabad was the only trade union to take any effective share in the settlement of claims for compensation on behalf of the workers. This Union handled 244 cases during 1937 and compensation amounting to Rs. 21,915 was secured. In Bengal the activity of individual trade unions was more marked in 1937 as compared with 1936.

TRADE UNIONISM AND TRADE UNION LAW.

The earliest known trade unions in India were (1) The Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1905; and (4) The Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the Great War. Trade organisations were, however, not unknown and trade or craft guilds had a definite place in the social economy of the village communities. Each trade or craft was the monopoly of a particular caste, and the organisation that existed for each occupational caste was known as a 'guild'. The two main functions of these guilds were (1) to regulate the relations between the members *inter se*; and (2) to deal with questions affecting the relations of the caste as a whole *vis-a-vis* the community. The *panchayats*, as the executives of these guilds were called, enforced their decisions on their members by means of social sanctions, and their demands on the community by means of *harkats*, i.e., withholding of service. These guilds differed from

modern trade unions in that they did not consist of wage earners, were not open to members outside the particular castes concerned, and that they had no written rules or regulations. Their background was more social than industrial and they were a type of 'close trade unions.' Contact with the West and the gradual industrialisation of the country, however, introduced cleavages in the solidarity of the village communities and consequently into the homogeneity of the old craft guilds which began to disintegrate and disappear only to emerge later in a form more suited to modern industrialism.

The decade following the end of the World War witnessed rapid developments in the field of trade unionism in India, but it must be regretfully admitted that organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many of the other industrialised countries of the world. The reason for this can be put in a nutshell: lack of a will to organize as far as the workers are concerned and the absence of efficient leadership. Some labour leaders were men who had the good and welfare of labour genuinely at heart. But many went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere tub thumpers who liked hearing their own voices and who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers constituted themselves into strike committees. These committees when they were first formed

secured a considerable measure of success in so far as concessions in wage rates were concerned; but, whereas many of these self-appointed committees fell into a state of inanition on the conclusion of a dispute; a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginnings of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership; but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and in the textile industry in Ahmedabad City, and in some other centres. If an estimate may be attempted, it would perhaps not be incorrect to say that at the beginning of the year 1924 there were about 150 unions in India with a total membership of about half a million workers.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the annual sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. These bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mills workers in Bengal and four or five unions of textile workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform. It is true that the Bombay Girni Kamgar Union—a communist organisation formed at the commencement of the general strike of six months in the cotton mill industry in Bombay City in 1928—claimed a membership of over 50,000 at the end of that year, but this union lost its membership almost entirely after the disas-

trous general strike which it conducted in 1929. The latter strike almost killed the trade union movement in the cotton textile industry in Bombay and although the Red Flag Girni Kamgar Union has succeeded from time to time in increasing its membership, it has equally rapidly lost the greater part of it owing to the uncalled for and disastrous strikes which it has conducted in the industry. The latest example of such strikes was the General Strike which lasted from 3rd March to 13th April 1940 in connection with the refusal of the Union to accept the Dearness Allowances offered by the Millowners' Association, Bombay, which had accepted the findings of the Board of Conciliation appointed by the Government of Bombay in the matter.

In an earlier section it was stated that if employers in Indian industry had had the sagacity and the fore-sight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical international conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to be to combat trade unionism. It is unfortunately too true that many employers in India have looked askance at the growth of organisation among their workers and that employees who have taken part in trade union activities have been victimised. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator; and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries; but with the exception of Ahmedabad where a strong trade union had been formed of the workers in cotton textile mills under the leadership of Mahatma Gandhi whom the Ahmedabad Millowners would not possibly displease on political grounds, and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned, trade unions were faced with a three-edged weapon. On one side workmen taking interest in trade union activities were victimised on another, the majority of the employers refused to recognise unions whose executives were composed of outsiders and on the third an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book. The Indian Trade Unions Act was passed in March 1926 and was brought into operation with effect from 1st June 1927.

THE INDIAN TRADE UNIONS ACT, 1926.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters, (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers, and persons under the age of 15 are debarred from membership of any registered union.

Registration.—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent. of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contra-

vened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the local Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions.—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases. As this immunity is not enjoyed by unregistered trade unions, Mr. N. M. Joshi introduced a private Bill in the Legislative Assembly in 1927 to amend the Indian Penal Code with the object of protecting such unions from the law of criminal conspiracy. The Bill was circulated to the various Provincial Governments in India for opinion but was stoutly opposed, mainly on the ground that it would discourage registration. The Government of India concurred with this view and as a result of Government opposition to it, the Bill was defeated on the 8th September 1928 on a motion for its reference to a Select Committee.

The Government of India issued a notification under the adaptation of India Laws Orders in Council in 1933 directing that unions whose objects are not confined to one Province and whose membership covers persons in two or more Provinces, as in the case of Railway Unions, should register with the Registrar appointed for such Trade Unions under adapted Section 3. The additional District Magistrate

of Delhi has been appointed Registrar of Trade Unions for such unions.

The administration of the Act is entirely on a provincial basis and each local Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province. All provincial Governments are empowered to make rules for the manner in which the annual audit of registered unions should be carried out, for prescribing the forms and the manner in which unions may apply for registration and in which registered unions should forward the required notices, etc., to the Registrar, and for the fees payable for registration and inspection of the register and other documents pertaining to any registered union. Unlike the various other pieces of labour legislation in India which have been subjected to frequent revision, there has been no amendment of the Indian Trade Unions Act, except for a slight modification which was made in 1928 in Section 11 regarding appeal in order to clarify the provisions of that section, and the present law on the subject continues to remain the same as it was when the Act was first passed in 1926.

EXTENT OF REGISTRATIONS UNDER THE ACT.

Trade unions were at first slow to seek registration under the Act. There had been no prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in the case of strikes conducted by unions since the Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice, most of the existing unions thought that registration involved obligations *re.* maintenance of proper books and accounts, audit and the submission of notices and statements of annual accounts and restrictions *re.* the framing of rules in accordance with the requirements of the Act and on expen-

diture which could be incurred which were too disproportionate in comparison with the rights and privileges which registration conferred. The impetus to registration however came from the employers who in many cases insisted on registration prior to recognition—in many cases even registration did not secure recognition—and the first organised move in this direction came from the railways and the Bombay Millowners' Association who, on the breaking out of the general strike in the Bombay cotton mills in April 1928, refused to enter into any negotiations except with the representatives of registered unions. The Bombay Textile Labour Union which had been formed in 1926 by Messrs. N. M. Joshi and R. R. Bakhale was among the first to seek registration under the new Act, but three other unions of cotton mill workers in Bombay City had not registered and these at once applied for registration as soon as the Bombay Millowners made registration a condition of recognition. After this, several unions all over India sought registration under the Act, but in many cases registrations were short-lived because they had to be cancelled owing to failure to submit annual returns or for non-compliance with the other requirements of the Act. It is of interest to observe that the Textile Labour Association, Ahmedabad, which is the biggest and best organised trade union in India refrained, on purely political grounds, from registering until the end of 1935 and it only did so then owing to the probable decision of the Delimitation Committee to make registered textile unions in Ahmedabad a basic constituency for the return from that centre of labour representatives to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The following table shows the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns. The figures exclude cancellations of registration.

Registered Trade Unions in British India.

Year	Number of registered trade unions	Unions furnishing returns.		
		Number	Membership	Income.
				Rs. (In lakhs).
1927-28	29	28	160,619	1.64
1928-29	75	65	181,977	3.17
1929-30	104	90	242,355	4.33
1930-31	119	106	219,115	4.07
1931-32	131	121	235,693	4.78
1932-33	170	147	237,369	5.57
1933-34	191	160	268,071	5.03
1934-35	213	183	284,918	5.29
1935-36	241	205	268,326	5.29
1936-37	296	228	261,074	4.88
1937-38	420	343	390,112	6.93

The percentage of female membership in the above figures is very small indeed. In 1927-28 it was 1.166 in 1932-33 it was 5.080 and in 1937-38 it was 14.703 or only 3.4 per cent. of the total membership in that year. Out of the 420 registered unions on the 31st March 1938, 171 unions were in Bengal, 50 in the Province of Bombay, 54 in the Province of Madras and 44 in the Punjab. The figures given in the above table for membership and income are theoretical because they include persons who have not paid their subscriptions and income which has not been recovered. In the membership of 390,112 in the 343 unions which furnished returns for the year ending 31st March 1938 is analysed it is found that 158,068 were employed on railways and that 46,057 were seamen, the membership in 84 registered unions of textile workers was 69,444. The All-India Annual Reports on the Administration of the Indian Trade Unions Act which are compiled and published by the Government of India are considerably delayed owing to the difficulty which Provincial Governments experience in securing the annual returns from the registered unions concerned. The Report for the year 1938-39 was therefore not available when we went to press but from such information as is available we find that there were nearly 700 registered trade unions in India in September 1939. Of these, 231 were in Bengal 103 in

Madras, 83 in the Punjab, 71 in Bombay, 46 in the United Provinces and 35 in the Central Provinces and Bihar. Figures showing the membership of these unions are not available but it is reckoned that the total membership of all the 700 odd unions in India in that month must have been considerably over half a million. The Province of Bombay is the only province in India which regularly collects information and statistics in connection with all trade unions, whether registered or not. The following table shows the progress of the trade union movement in that province.—

Growth of Trade Unions in the Province of Bombay.

Year	Number of unions.	Membership.
1923	17	38,963
1926	54	69,514
1929	92	1,93,733
1930	86	125,313
1932	89	107,189
1935	108	1,06,201
1936	99	88,119
1937	114	1,03,421
1938	153	1,41,592
1939	176	1,81,597

If the figures contained in the above table for the year 1939 (1st December) are analysed by industries, the results are as set out below:—

Distribution of Membership of Bombay Unions.

Class of industry.	Number of unions.	Membership	Percentage to total membership.
Textile	32	70,786	42.28
Seamen	2	29,961	16.50
Railways	9	25,006	13.82
Posts and Telegraphs	32	6,302	3.47
Municipal	10	7,446	4.10
Miscellaneous	91	36,006	19.83
Total	176	1,81,597	100.00

Out of the 32 unions of cotton textile workers in the Province of Bombay twelve with a total membership of 32,553 are in Ahmednagar and five with a total membership of 29,425 are in Bombay City.

THE PROGRESS OF THE TRADE UNION MOVEMENT IN INDIA.

In the absence of any reliable statistics and information on the growth and activities of trade unions in India outside the Province of Bombay it has not been possible to deal with the development of the movement from an all-India point of view. The Labour Office of the Government of Bombay has collected full information re all trade unions in the Province of Bombay once in every three months since the middle of 1922 and this information has been incorporated in

Quarterly Reviews in the *Labour Gazette* published monthly by that office, but similar information is not available for the other provinces in India. Every province, however, compiles an annual administration report on the working of the Indian Trade Unions Act, 1926, and the Government of India publishes a general report based on the information contained in the provincial reports. These reports are unfortunately confined only to questions in connection with the administration of the Act—numbers of registrations and cancellations of registration membership of registered unions and consolidated statements of their account—and they contain little, if any, information about the activities of the unions themselves.

We have so far dealt with the development of the trade union movement in India until the coming into operation of the Trade Unions Act. Up-to-date statistics based on such figures as

are available have also been given. We shall now proceed to conclude this review with a rapid survey of the main events in the movement since 1927. The height of the movement was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Ginn Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases. Their main object in getting into the trade union movement, however, was to use it as a tool for the furtherance of their revolutionary principles and doctrines for the overthrow of the existing Government and the uprooting of capitalism. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were responsible for rising in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. This has been dealt with in an earlier section. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Ginn Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it has not yet recovered. The workers were left thoroughly disillusioned and they lost all faith in the *bona fides* even of genuine trade unionism.

The communists not content with the mischief they had wrought in the ranks of individual trade unions made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Ginn Kamgar Union with a membership of 51,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the tenth session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conference on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Ranjive broke away to form the All-India Red Trade Union Congress. By this time however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group, (2) the liberal group, and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues. At the end of the year 1937, the National Trades Union Federation had a membership of 82,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mr. Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trades Union Federation held at Nagpur

the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these bodies were that the basis of representation on the joint General Council of the new combined Trade Union Congress be fifty-five—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trade Union Federation *in toto*. The following were appointed office bearers of the Trade Union Congress: Dr S C Banerji (Federation) President, Mr Atiab Ali (Federation), Mr Jannadas Mehta (Federation) and Mr Mukundlal Sircar (T.U.C.) Vice-Presidents, Mr. R. R. Bakhde (Federation) Secretary, Mr. R. S. Nimbkar (T.U.C.) Treasurer, Mr. B. K. Mukerji (T.U.C.) and Mr. S. A. Parulekar (Federation), Assistant Secretaries. These appointments of office bearers were intended to be for a period of one year but no session of the All-India Trade Union Congress has been held since April 1938, although a few meetings of the General Council have taken place. Mr. R. R. Bakhde resigned his appointment as General Secretary of the Congress on his appointment by the Government of Bihar as the Vice-Chairman of the Bihar Labour Inquiry Committee and Mr. S. A. Parulekar was appointed General Secretary in his place. On Mr. Parulekar being convicted to 18 months' simple imprisonment for offences under Sections 124A and 153A of the Indian Penal Code in March 1940, Mr. N. M. Joshi, M.L.A., was appointed Acting General Secretary of the Congress by the General Council. The combined Trade Union Congress now has a total number of 191 unions with 354,511 members affiliated to it. One of the terms of the agreement reached at Nagpur was that if the combined body worked satisfactorily for a year the Federation should be finally dissolved. At the last meeting of the General Council which was held in Nagpur early in 1940 it was decided that the period of affiliation should be extended by one year more.

As far as millions of cotton mill workers in the City of Bombay are concerned, the importance of developing healthy trade unions has never been under-rated by the Millowners' Association, Bombay. As a matter of fact, the need for a genuine and properly conducted union has always been felt by the millowners. During the General Strike of 1928, the representatives of registered unions were afforded an unrivalled opportunity of negotiating directly with the Millowners but it was thrown away and a Joint Strike Committee was formed of whom fifty per cent were communists. Despite this, the Association carried on negotiations with the Committee. Following the six months' Strike of 1928, Communist Unions in Bombay again boycotted another General Strike in 1940 in mills in Bombay for a prolonged period in 1929. This strike was conducted at the outset by the British Trade Union Congress. The unjustifiable character of the strike and the methods of the Girni Kamgar Union which called it were condemned in the most emphatic terms both by the Court of Inquiry appointed by the Government of Bombay to inquire into the causes of this strike and by the Bombay Riots Inquiry Committee. After the revival of the Bombay Girni Kamgar Union (Red Flag) in 1937-38,

another opportunity was afforded to the representatives of that organization of carrying on direct negotiations with the representatives of the Millowners in the Business Allowance Dispute in 1940 although the Union had acquired no status under the Bombay Industrial Disputes Act, 1938. It was hoped that the leaders would show themselves as genuine trade unionists but it was not to be and although the Millowners Association accepted the recommendations of the Rangnagar Board of Conciliation, the Union refused to do so and called out another General Strike which lasted for forty days. All the facts dealt with here have been described at some length in other parts of this Section. The real position is that the Millowners Association, Bombay, has always been prepared to encourage genuine trade unions and to recognise them but has set its face against granting recognition to communist organizations.

ENFRANCHISEMENT OF LABOUR UNDER THE NEW CONSTITUTION.

The question of representation of labour in the central and provincial legislatures has in recent years assumed considerable importance owing to the growing interest taken by the general public in labour matters. Under the constitution established by the Government of India Act, 1919, both the Governor-General and the Provincial Governors had powers to make a certain number of nominations to the Central Legislative Assembly and to the Provincial Legislative Councils. The majority of such nominations were to be from the ranks of Government officials but both the Governor-General and the Provincial Governors were permitted to exercise their option in nominating persons from other outside interests in order to remedy inequalities of representation. In pursuance of this power one nominated seat in the Legislative Assembly and one nominated seat in the Legislative Councils of Bengal and Bombay were reserved for representatives of labour. The Governors of Punjab, the Central Provinces, Bihar and Orissa and Assam followed suit and nominated one member each for labour interests in their respective Councils. A little later, the labour representation in Bengal was increased to two and in Bombay to three seats.

The question of the enfranchisement of labour under the new constitution received considerable attention from every Commission and Committee appointed in connection with the reforms—(1) the Provincial Franchise Committees set up by the various Provincial Governments in India in 1931; (2) the Franchise Sub-Committee of the Indian Round Table Conference; (3) the Indian Franchise Committee; (4) the Provincial Delimitation Committees set up by local Governments in India; and (5) the Indian Delimitation Committee set up in 1935 under the chairmanship of Sir Lawrence Hammond. Several alternative schemes of representation were considered. The Royal Commission on Indian Labour were of opinion that the method which was likely to be most effective in securing the best representation of labour was that of election by registered trade unions. The Indian Franchise Committee were, however, unable to accept trade unions as the sole basis of representation and they recommended representation

through constituencies composed of registered trade unions and also through special labour constituencies composed of workers in factories employing a minimum of ten persons in selected areas and centres. On the basis of a combination of these two methods, the Committee recommended 38 seats for labour in the Provincial Legislatures—eight each for Bombay and Bengal, six for Madras, four each for Bihar and Orissa and Assam, three each for the United Provinces and the Punjab and two for the Central Provinces. With regard to the representation of labour in the Federal Assembly, the Indian Franchise Committee recommended that labour should get the same extent of representation as commerce, viz., eight seats. Election should as far as possible be through registered trade unions except in the case of provinces such as Bengal and Assam where trade unions in the two chief industries of jute and tea are either too weak or non-existent. In such cases the method of representation should be considered at the time of the delimitation of constituencies. These various proposals were accepted by the Third Round Table Conference and by the Joint Select Committee of Parliament on Indian Constitutional Reforms with the exception of a slight reshuffling of seats consequent on the decision for the separation of Sind and Orissa. These two new provinces were to get one seat each at the expense of Bombay and Bihar and Orissa and the number of seats in the Federal Assembly was increased from eight to ten of which one was to be a non-provincial seat and the remaining nine to be distributed among the provinces, Bombay and Bengal getting two each and one seat each going to Madras, Bihar, the United Provinces, the Central Provinces and Assam.

The Indian Delimitation Committee, whose report was published in February 1936, laid down the following requirements which a trade union should fulfil before it can be included in the electorate —

(1) It should have been in existence for two years and have been registered for one year before the date fixed for the preparation of the electoral roll;

(2) Its membership should not have fallen below 250 during the year preceding the preparation of the electoral roll;

(3) It must have complied with any rules made under the Indian Trade Unions Act for the inspection of books by the Registrar and for professional audit; and

(4) Its fulfilment of the preceding conditions should have been attested by a tribunal to be appointed by the Governor.

The Committee further recommended that the Indian Trade Unions Act should be so amended as to invest local Governments with the power of inspecting the registers of registered trade unions and to make Government or professional audit of their accounts compulsory. As regards the qualifications of an elector in a labour constituency, the Committee recommended that (1) he must have attained the age of 21 years; (2) he has had a place of residence in the province for six months immediately preceding a date to be fixed by the local Government; (3) in the case of a trade union constituency, he belongs to a registered trade union included in

the constituency and has paid up his subscription for the twelve months preceding the date of the preparation of the electoral roll; (4) in the case of a special labour constituency he has been in continuous employment in a factory or a mine for a period of not less than 180 days in the year preceding the date of preparation of the electoral roll; and (5) he is not employed in a clerical, supervisory, recruiting or administrative capacity. The qualifications laid down by the Committee for a candidate are that he should have attained the age of 25 years, satisfied the conditions laid down in the Fifth Schedule to the Government of India Act and that he should be an elector either in the constituency for which he stands or in any other labour constituency in the province concerned. As far as the method of election is concerned, the Indian Franchise Committee were of opinion that where a trade union constituency is confined to a single area voting might be direct but where it covers two or more different centres election should be through an electoral college composed of delegates elected in each union in the proportion of one for each group of 100 workers. The Indian Delimitation Committee were, however, strongly in favour of direct election, whether in trade union or in special labour constituencies, unless there were quite decisive practical difficulties in the way but they favoured the principle of electoral colleges in the case of certain unions of railway workers.

As far as the actual constituencies for the Provincial Legislative Assemblies are concerned the Indian Delimitation Committee recommended that out of the eight seats given to labour in Bengal, two seats should be with trade union constituencies for registered unions of railway and water transport workers and six for special labour constituencies as follows: Registered factories in Calcutta and suburbs, Howrah, Barrackpore and Hooghly (one seat each), one seat for coal mines in the Annsol sub-division of the Burdwan District and one seat for tea garden labour in the Jalpaiguri and the Darjeeling Districts. In the Bombay Presidency, Ahmedabad textile unions and railway unions in Bombay got two seats each, the Bombay textile unions and unions of seamen and dock workers got one seat each and textile labour in Sholapur City got one seat on the basis of a special labour constituency. Of the six seats in Madras, all railway unions in the presidency and unions of textile workers in the Madras District got one seat each and the four remaining seats were divided between special labour constituencies of (1) textile workers in Coimbatore and Malabar, (2) Madras City dock and factory labour (excluding railways and textiles), (3) Vizagapatam dock and factory labour, and (4) West Godavari, Krishna and Guntur factory labour. In the United Provinces all registered trade unions got one seat and the two remaining seats were allocated to industrial factory labour in Cawnpore and industrial labour in Lucknow, Azam, Aligarh and Allahabad. In the Punjab, the North Western Railway Union got one seat and the two remaining seats were allocated to industrial labour in special labour constituencies composed of certain districts of East and North Punjab. In Bihar, registered mining unions in Dhanbad were allotted one seat and three went to special labour constituencies for (1) Jamshed-

pur factory labour, (2) Monghyr and Jamalpur factory labour, and (3) Hazaribag mining labour. In the Central Provinces, trade unions in Nagpur City got one seat and the remaining seat was allotted to a special labour constituency of industrial labour employed in certain areas in the rest of the province. The one seat in Orissa is for a special constituency for the whole province and the allocation of the four seats in Assam are to vary at successive elections between tea gardens in different districts. As far as representation in the Federal Assembly is concerned, the proposals vary between the allocation of the two seats for the Bombay Presidency between all registered unions in Bombay and Ahmedabad, to the Governor of the Province acting at his own discretion at each successive election in Assam.

In the following table we reproduce the names of the various persons elected to the different Provincial Legislative Assemblies in India from different Labour Constituencies:—

MADRAS LEGISLATIVE ASSEMBLY.

Mr. G. Krishnamurthi Ayl.	Railway Trade Unions.
Mr. Genta Chelvaipathi Chetti Garu	Textile Trade Unions.
Mr. N. G. Ramaswami Nayadu Ayl	Textile Workers.
Mr. P. R. K. Sarma Ayl.	Madras City Dock and Factory Labour (excluding Textile and Railway Labour).
Mr. Subbarao Karunakaram Garu	Vizagapatam <i>cum</i> East Godavari Dock and Factory Labour.
Mr. V. V. Narasimham Garu	West Godavari <i>cum</i> Kistna <i>cum</i> Guntur Factory Labour.

BOMBAY LEGISLATIVE ASSEMBLY.

Mr. D. K. Jagtap	Bombay City and Suburban Textile Unions
Mr. Gulzarilal Nanda	Ahmedabad Textile Unions (Two seats)
Mr. K. K. Desai	Ditto.
Mr. Jannadas M. Mehta	Railway Unions (Two seats).
Mr. S. H. Jhavadala	Ditto.
Mr. A. H. Mirza	Trade Unions of Seamen and Dock Workers.

BENGAL LEGISLATIVE ASSEMBLY.

Mr. J. N. Gupta	Railway Trade Unions.
Mr. Aftab Ali	Water Transport Trade Unions.
Mr. Suresh Chandra Banerjee	Calcutta and Suburbs (Registered Factories).
Mr. Niharendra Dutt Mazumdar	Barrackpore (Registered Factories).
Mr. Sibnath Banerjee	Howrah (Registered Factories).
Mr. M. A. Zaman	Hooghly <i>cum</i> Serampore (Registered Factories).
Mr. B. Mukerjee	Collieries (Coal Mines).
Mr. Litta Sirdar	Bengal Dooms (Western), Darjeeling Sadar, Bengal Dooms (Eastern) and Kurseong.

UNITED PROVINCES LEGISLATIVE ASSEMBLY.

Mr. Raja Ram Shastri	Trade Union Constituency.
Mr. Suraj Prasad Awasthi	Cawnpore Industrial Factory Labour.
Mr. B. K. Mukerjee	Industrial Factory Labour in Lucknow, Agra, Allahabad and Aligarh

PUNJAB LEGISLATIVE ASSEMBLY.

Mr. Lala Sita Ram Mehra	Trade Unions.
Mr. Dewan Chaman Lal	East Punjab.
Rai Sahib Sohan Lal	North Punjab Labour Constituency.

BIHAR LEGISLATIVE ASSEMBLY.

Nil	Mining Trade Unions.
Mr. Babu Natha Ram	Jamshedpur Factory Labour
Nil	Monghyr <i>cum</i> Jamalpur Factory Labour.
Mr. Babu Khetra Nath Sen Gupta	Hazaribag Mining Labour.

C. P. AND BERAR LEGISLATIVE ASSEMBLY.

Mr. G. S. Page	Trade Union Labour.
Mr. V. R. Kalappa	Factory Labour.

ASSAM LEGISLATIVE ASSEMBLY.

Mr. Bidishy Pan Tanti	Doom Dooma, Ensukia and Dibragarh.
Mr. Phanaich Chandra Das	Jodhat, Nazim and East Golaghat.
Mr. Babu Binode Kumar J. Sarwan	Thakimburi, Biswanath and Paneri.
Mr. Pabu Parmanya Parida Ahir	Silchar Srimangal and Longal Valley.

ORISSA LEGISLATIVE ASSEMBLY.

Mr. Babu Pyari Sankara Roy	Orissa Labour Constituency.
------------------------------------	-----------------------------

SIND LEGISLATIVE ASSEMBLY.

Mr. N. A. Bechar	Sind Labour Constituency.
--------------------------	---------------------------

THE FUTURE OF TRADE UNIONISM
IN INDIA.

The proposals of the Indian Deputation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Federal Assembly and to the Provincial Legislative Assemblies on the basis of registered trade unions are bound to have some effect both on the formation of new unions and on the registration of such of those as have not yet registered under the Indian Trade Unions Act. It is also probable that registered unions will make better endeavours than they have hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. At the same time, however, the imposition of these further restrictions on the conduct of the affairs of registered trade unions might very well tend to dissuade several interested outsiders from continuing at the helm of affairs of their respective unions; and it is quite possible that in the absence of such leadership many unions will tend to disintegrate and disappear. As far as the workmen in Indian industries are concerned, trade unionism has not taken on anywhere near to the extent which it has with workmen in the West; and, as has already been stated above, the fear of victimisation is too strongly entrenched in the minds of the workers to enable them to enter into combinations promoted to safeguard their interests. Things might have been different had the labour franchise been limited entirely to registered trade unions but in most provinces outside the Province of Bombay the majority of the constituencies are special labour constituencies with which trade unions are in no way concerned. It is also very doubtful whether an Indian industrial worker will part with a monthly quota of his already meagre income for union subscriptions merely for the right of a vote. The experience of the last fifteen years shows that most of the unions which

because defunct went to the wall owing mainly to the fact that their officials were not able to collect the necessary subscriptions from the members for the reason that the Indian workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is happily in a somewhat different position because it provides a host of welfare schemes in the form of hospitals and dispensaries, recreation and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials like Mr. Gulzarilal Nanda, Mr. Khanchilal K. Desai and Mr. S. P. Dave, who have made the union then life-work. The office of the union with its hundreds of more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few, if any, unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membership—bolstered in order to convince the employers concerned re their *bona fides* for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the hollow structure which exists today. Whilst there are no indications for optimism there is, at the same time, no cause for pessimism in the matter but the hopes of all persons interested in the welfare of the labour movement in India are, as far as trade unionism is concerned, in the laps of the gods.

INDUSTRIAL DISPUTES AND TRADE DISPUTES LEGISLATION.

In the first part of this note on "Labour in India" in which we have given a complete survey of the growth of the labour problem in this country from its first beginnings in the seventies of the last century up to the present day we have dealt at some length with all the more important industrial disputes, and we have also given the findings and the recommendations of the various committees and departmental enquiries instituted in connection with them. We have also given statistics of industrial disputes in India during certain periods of intense industrial strife and we have traced the growth of conciliation and arbitration machinery culminating in the passing, by the Government of Bombay, of the Bombay Trade Disputes Conciliation Act of 1934 and the Bombay Industrial Disputes Act of 1938 which replaced the 1934 Act from 1st August 1939. In view of this there is very little left to be said in this particular section and our remarks will therefore be confined to a brief description of the Indian Trade Disputes Act, 1929 and to the all-India statistics of industrial disputes during the last seventeen years. We are, however, introducing a new feature in this section from this year and we give at the end of this section brief reviews of all industrial disputes affecting 50,000 workers or more which occurred in India during the last one year ending April 1940.

THE TRADE DISPUTES ACT, 1929.

The Trade Disputes Act was first passed in 1929. Its life was limited to five years but as a result of the recommendation made by the Royal Commission on Indian Labour in the matter an amending Act was passed in 1934 by virtue of which it was placed permanently on the Statute Book. The Government of Bombay under Sections 16 and 17 of the Trade Disputes Act launched a prosecution against eight leaders of the Textile Strike of 1934 on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance of a trade dispute; and (2) that the strike was designed to inflict severe, general and prolonged hardship on the community and thereby to compel the Government to take or abstain from taking some particular course of action. The accused were charged with the offence of inciting others to take part in an illegal strike. The Chief Presidency Magistrate held that the strike was not illegal and acquitted the accused. The Government of Bombay preferred an appeal in the High Court but lost the appeal too. The Government of India therefore, passed a further Amending Act in March 1938 by virtue of which the words "general and prolonged" were omitted from clause (b) of sub-section (1) of section 16 of the Act. Advantage was taken at the same time to provide for the appointment of Conciliation Officers and to amend the Act in a few other minor particulars. The main provisions of the Act as it now stands are as follows :-

With the exception of sections 1 and 2 which deal with short title, extent, duration, etc., and interpretations, and section 19 which deals with

rule-making powers, the main body of the Trade Disputes Act, 1929, falls into three parts. The first provides for the appointment of Courts of Enquiry and Boards of Conciliation (sections 3 to 14); the second contains special provisions with regard to strikes in public utility services (section 15); and the third deals with illegal strikes and lockouts (sections 16 to 18). The first part of the Act relating to the establishment of tribunals for the investigation and settlement of trade disputes was based generally on the British Industrial Combs Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference is that whereas the British Act sets up a standing and permanent Industrial Court, the Conciliation Boards which the Indian Act makes provision for are intended to be appointed *ad hoc* like the Courts of Enquiry, in order to deal with particular disputes.

The Governor-General in Council, in the case of railways or concerns under the control of the Government of India; and the local Government, in the case of all other concerns or groups of concerns, have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Inquiry for report, or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government; but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be, provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Inquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board; but in practice both parties would be expected to do so.

The second part of the Act which covers public utility services makes it a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in

writing to the employer of their intention to do so. Penalties are also provided for persons abetting such an offence. This provision is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a settlement. Provisions of a somewhat similar type are also to be found in the Indian Post Offices Act and in a number of Municipal Acts in India; and the principle is one which has been widely accepted in other countries. Among "public utility services" have been included railways, postal, telegraph or telephone services, undertakings supplying light or water to the public, and any system of public conservancy or sanitation.

Clauses 16 to 18 of the Act relating to illegal strikes and lockouts closely follow the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927, but these provisions are only applicable in the case of those strikes and lockouts which satisfy both of two conditions: in the first place, the strike or lockout must have objects other than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong; and, in the second place, the strike or lockout must be designed or calculated to inflict severe hardship upon the community and thereby to compel Government to take or abstain from taking any particular line of action. Persons furthering illegal strikes or lockouts are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

During the period of nearly ten years between the passing of the Act in 1929 and the coming into effect of Provincial Autonomy in April 1937, the Industrial Disputes Act was made use of only on five occasions. After August 1937, however, Congress ministries, particularly in Madras, made an extensive use of the Act. In that Province five Courts of Inquiry and one Board of Conciliation were appointed in the year ending September 1938. Similar action has been taken in Bengal, Bihar, the United Provinces and Assam in the last of which a Court of Inquiry was appointed in August 1938

in connection with an industrial dispute in the Assam Oil Company, Ltd., at Digboi. The Government of Bombay, however, have only used the Act on two occasions. Once in 1929, immediately after it was passed, when it appointed the Pearson Court of Inquiry to enquire into the causes of the General Strike of 1929 in Cotton Mills in Bombay; and, for the second time in March 1940 when it appointed the Madgavkar Board of Conciliation in connection with the dispute between the Bombay Electric Supply and Tramways Company Ltd. and its employees over the question of the grant of dearness allowances on account of increased cost of living owing to the war.

As has already been stated at the beginning of this section, events leading up to the passing of the Bombay Industrial Disputes Act in 1938 and the appointment of the Commissioner of Labour in the Bombay Presidency as the ex-officio Chief Conciliator have already been dealt with in the general survey. The scope of that Act has also been surveyed. Reference has also been made elsewhere to the excellent private conciliation and arbitration machinery which exists in the textile industry in Ahmedabad for the examination and settlement of all industrial disputes. It will be seen, therefore, that as in almost all the advanced industrial countries of the world, conciliation in India too has come to be regarded as a matter of first rate importance in the settlement of industrial disputes. The appointment of Labour Officers by the Millowners' Association, Bombay, and by the Government of Bombay have been followed by the creation of similar posts in Bengal, the United Provinces, Madras and in Bihar and it is expected that all Provinces will make similar appointments in the near future.

STATISTICS OF INDUSTRIAL DISPUTES.

Statistics of industrial disputes in India have only been collected since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in man-days.

Industrial Disputes in India, 1921-39.

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.	Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.
1921 ..	396	600,351	6,984,426	1930 ..	148	196,301	2,261,731
1922 ..	278	435,434	3,972,727	1931 ..	166	203,008	2,408,123
1923 ..	213	301,044	3,051,704	1932 ..	118	128,099	1,922,437
1924 ..	133	312,462	8,750,918	1933 ..	146	164,938	2,168,961
1925 ..	134	270,423	12,578,129	1934 ..	159	220,808	4,775,559
1926 ..	128	186,811	1,097,478	1935 ..	135	114,217	973,475
1927 ..	129	131,655	2,019,979	1936 ..	157	169,029	2,358,062
1928 ..	203	506,851	31,647,494	1937 ..	379	647,801	8,982,257
1929 ..	141	532,016	12,165,631	1938 ..	399	401,075	9,198,708
				1939 ..	406	409,189	4,992,795

MAJOR STRIKES IN INDIA DURING 1939-40.

1. *Assam Oil Company at Dibrugarh and Tezpur (Assam)*: On 31st March 1939, 10,000 employees went on strike as a protest against the discharge of surplus hands without the promised notice to the Labour Union. The strike later collapsed however with the declaration of the oil fields as a protected area under the Defence of India Ordinance and the removal of certain labour leaders from that area. The strike is considered to have ended in the 1st week of September 1939.

2. *Engress Mills, Nagpur (Central Provinces and Berar)*: On 1st May 1939, 8,500 workers struck work demanding, *inter alia*, recognition of their union, grant of leave with pay and security of service. The strike was called on on being promised by the Provincial Government that they would appoint a conciliation board to consider their demands. The strike ended on 4th May 1939.

3. *Glass Factories in Ferozabad (United Provinces)*: The Labour Union (Mazdoor Sabha) put forward certain demands on behalf of the workers and as an answer to the demands the owners of 23 factories closed their factories on 24th August 1939 affecting 8,000 workers. The dispute was settled on the 7th October by the arbitration of 10 private persons whose award was accepted by both the parties and the strike ended.

4. *General Strike in Campania Mills, Coimbatore*: The General Council of the Mazdoor Sabha (Labour Union) declared a general strike on 2nd October 1939 with a view to force a solution of the dispute in the New Victoria Mills which related to reduction of wages and re-employment of workers who had gone on strike previously. The strike commenced in the Murr Mills and spread to other mills involving 30,000 workers. Through the intervention of the Provincial Government the strike was called off unconditionally on 11th October 1939.

5. *Anglo-India Jute Mills (Bengal)*: A strike which occurred on 3rd October 1939 in Lower and Middle Mills spread to other mills involving 10,900 hands. The Minister for Labour ordered

an inquiry into the strikers' grievances and the strikers resumed work unconditionally on 11th October 1939.

6. *Jute Mills in Bengal*: Between 6th and 14th November 1939 about 36,000 workers employed in 10 jute mills struck work demanding higher wages. The Committee of the Indian Jute Mills Association decided to give 10 per cent. increase in wages. All strikers resumed work between 14th and 23rd November 1939.

7. *Hukmahand Jute Mills (Bengal)*: On 8th November 1939, 11,000 operatives struck work demanding the restoration of an alleged cut of 17½ per cent in wages. They resumed work on the 17th November when they were granted an increase of 19 pips in the rupee.

8. *Dhakeswari Cotton Mills, I and II (Dacca)*: The management who failed to restart work when some employees went on strike, declared a lock-out on 23rd January 1940 involving 6,000 hands. Through the intervention of the local Congress Committee a settlement was arrived at and all the strikers, except 54 who were suspended, resumed work on 22nd February 1940.

9. *The C. I. P. Baitang (Bombay)*: Failing to receive a reply for the demand of 40 per cent. increase in their wages 5,200 workers in the workshops at Parel and Matunga struck on the 5th February 1940. As the authorities promised to give their decision within a week the workers resumed work on the following day.

10. *General Strike in Cotton Textile Mills (Bombay)*: The general strike for dearness allowance which started on 3rd March in 14 mills later spread to 49 other mills involving a total labour force of 156,508 workers. The strike was called off on the 13th April 1940 and the workers resumed work unconditionally.

11. *Seamangers of the Calcutta Corporation (Bengal)*: On 26th March 1940, 18,000 workers struck work demanding 25 per cent. war bonus, etc. and were joined later by 2,000 other employees of the Corporation. An agreement was reached on 2nd April providing withdrawal of all prosecution cases, no victimization, re-employment of dismissed workers, payment of wages for the strike period and the grant of compensation of Re. 1 per head per month, etc. to those getting less than Rs. 30 and the strike ended.

THE INTERNATIONAL LABOUR ORGANIZATION.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-four further sessions have been held till the end of the year 1939 and a total of sixty-seven Conventions have been adopted. We give below, in serial order, the year and the place at which each of the twenty-five sessions of the Conference were held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter "G", Employers' Delegates by the letter "E" and Workers' Delegates by the letter "W". The names of the technical advisers to the Government, Employers' and Workers' Delegates have

been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear, alongside the titles, no action has been taken.

1st Session (Washington, 1919): Indian Delegation.—Government—Sir Atul Chatterjee and Sir Louis Kerslaw; Employers—Sir Alexander Murray; Workers—Mr. N. M. Joshi.

Conventions.

1. Hours of Work (Industry)—(AB)
2. Unemployment—(C)
3. Childbirth.
4. Night Work (Women)—(AB)
5. Minimum Age (Industry)—(D).
6. Night Work (Young Persons)—(AB)
- White Phosphorus—(D)

2nd Session (Geneva, 1920). G—Sir Louis Kershaw and Capt. D. F. Vinca; Seamen's Delegate—Mr. A. M. Mazzullo.

Conventions.

7. Minimum Age (Sea)—(E).
8. Unemployment Indemnity (Shipwreck)—(E).
9. Placing of Seamen.

3rd Session (Geneva, 1921). G—Sir Atul Chatterjee and Mr. I. N. Gupta. E—Sir Nowroji Saklavi; W—Mr. N. M. Joshi; Secretary—Mr. A. G. Chow.

Conventions.

10. Minimum Age (Agriculture).
11. Right of Association (Agriculture)—(AC).
12. Workmen's Compensation (Agriculture).
13. White Lead (Painting).
14. Weekly Rest (Industry)—(AB).
15. Minimum Age (Trimmers and Stokers)—(AB).
16. Medical Examination of Young Persons (Sea)—(AB).

4th Session (Geneva, 1922). G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford; W—Mr. N. M. Joshi; Secretary—Mr. C. H. Silver.

5th Session (Geneva, 1923). G—Sir Dadiba M. Dalal and Sir Louis Kershaw; E—Sir Joseph Kay; W—Mr. K. C. Roy Chowdhury.

6th Session (Geneva, 1924). G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Alexander Murray; W—Mr. Joseph Baptist.

7th Session (Geneva, 1925). G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Thomas Smith; W—Mr. N. M. Joshi; Secretary—Mr. R. N. Gilchrist.

Conventions.

17. Workmen's Compensation (Accidents).
18. Workmen's Compensation (Occupational Disease)—(AC).
19. Equality of Treatment (Accident Compensation)—(AB).
20. Night Work (Bakeries).

8th Session (Geneva, 1926). G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froese; W—Mr. M. Dand; Secretary—Mr. R. N. Gilchrist.

Conventions.

21. Inspection of Emigrants—(AC).

9th Session (Geneva, 1926). G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froese; W—Mr. M. Dand; Secretary—Mr. R. N. Gilchrist.

Conventions.

22. Seamen's Articles of Agreement—(AB).
23. Repatriation of Seamen.

10th Session (Geneva, 1927). G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr. R. P. Paranjpe (Substitute); E—Mr. G. D. Birla; W—Mr. V. V. Giri; Secretary—Mr. S. Lall.

Conventions.

24. Sick-ness Insurance (Industry, etc.).
 25. Sick-ness Insurance (Agriculture).
- 11th Session (Geneva, 1928). G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. J. C. Walton (Substitute); E—Mr. Navaratnam Mararjee; W—Mr. Diwan Chiman Lall; Secretary—Dr. R. C. Rawley.

Conventions.

26. Minimum Wage Fixing Machinery.
- 12th Session (Geneva, 1929). G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. A. G. Chow (Substitute); E—Mr. Kasturbhai Lalbhai; W—Mr. N. M. Joshi; Secretary—Mr. A. Dabhu.

Conventions.

27. Marking of Weight (Packages Transported by Vessels)—(AB).
 28. Protection against Accidents (Dockers).
- 13th Session (Geneva, 1930). G—Sir Atul Chatterjee and Sir Geoffrey Corbett and Mr. C. W. A. Turner (Substitute); E—Mr. Jadunath Ray; W—Mr. M. Dand; Secretary—Mr. C. W. A. Turner.

14th Session (Geneva, 1930). G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. A. Lalit (Substitute); E—Mr. A. L. Ojha; W—Mr. S. C. Joshi; Secretary—Mr. G. Graham Dixon.

Conventions.

29. Forced Labour.
 30. Hours of Work (Commerce and Offices).
- 15th Session (Geneva, 1931). G—Sir Atul Chatterjee and Mr. A. G. Chow; E—Mr. Walchand Hirchand; W—Mr. K. R. Bakhale; Secretary—Mr. N. A. Molubani.

Conventions.

31. Hours of Work (Coal mines).
- 16th Session (Geneva, 1932). G—Sir Bhupendra Nath Mitra and Sir Atul Chatterjee; E—Mr. Shanmukham Chetti; W—Mr. Diwan Chaman Lall; Secretary—Mr. K. R. Menon.

Conventions.

32. Protection Against Accidents (Dockers) (Revised, 1932)—(D).
33. Minimum Age (Non-Industrial Employment).

17th Session (Geneva, 1933). G—Sir Atul Chatterjee and Mr. J. P. Gummings; E—Sir Phiroze C. Sethna; W—Mr. Aitab Ali; Secretary—Mr. K. R. Menon.

Conventions.

34. Fee Charging Employment Agencies.
35. Old-Age Insurance (Industry, etc.).
36. Old-Age Insurance (Agriculture).
37. Invalidity Insurance (Industry, etc.).
38. Invalidity Insurance (Agriculture).
39. Survivors' Insurance (Industry, etc.).
40. Survivors' Insurance (Agriculture).

15th Session (Geneva, 1934): G.—Sir Bhupendra Nath Mitra and Mr. A. G. Clow; E.—Seth Kasturbhai Lalbhai; W.—Mr. Jannadas M. Mehta; Secretary—Mr. A. Dibdin

Conventions.

41. Night Work (Women) (Revised)—(AB)
42. Workmen's Compensation (Occupational Diseases) (Revised).
43. Sheet-Glass Works
44. Unemployment Provision

19th Session (Geneva, 1935): G.—Sir Bhupendra Nath Mitra and Sir Joseph Bhow; E.—Mr. H. A. Laljee; W.—Mr. V. M. Ramaswami Mudaliar; Secretary—Mr. S. R. Zaman.

Conventions.

45. Underground Work (Women)—(A).
46. Hours of Work (Coal Mines) (Revised)
47. Forty-Hour Week.
48. Maintenance of Migrants, Pension rights.
49. Reduction of Hours of Work (Glass-Bottle Works).

20th Session (Geneva, 1936): G.—Sir Bhupendra Nath Mitra and Mr. S. N. Roy; E.—Sir H. M. Mehta; W.—Rao Sahib R. W. Fulay; Secretary—Mr. S. R. Zaman.

Conventions.

50. Recruiting of Indigenous Workers.
51. Reduction of Hours of Work (Public Works).
52. Holidays with Pay.

21st Session (Geneva, 1936): G.—Sir Firoz Khan Noon and Mr. A. Dibdin; E.—Mr. M. A. Master; W.—Mr. Atab Ali; Secretary—Mr. A. F. Motley.

Conventions.

53. Officers' Competency Certificates.
54. Holidays with Pay (Sea).
55. Shipowners' Liability (Sick and Injured Seamen).
56. Sickness Insurance (Sea).
57. Hours of Work and Manning (Sea).

22nd Session (Geneva, 1936): Same Delegation as at the 21st Session.

Conventions.

58. Minimum Age (Sea).

23rd Session (Geneva, 1937): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E.—Sir Hormusjee P. Mody; W.—Mr. S. C. Sen; Secretary—Mr. S. R. Zaman.

Conventions.

59. Minimum Age (Industry) (Revised).
60. Minimum Age (Non-Industrial Employment) (Revised).
61. Reduction of Hours of Work (Textiles)
62. Safety Provisions (Building).

24th Session (Geneva, 1938): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E.—Lala Shri Ram; W.—Mr. S. V. Parulekar, M.L.A. (Bombay); Secretary—Mr. M. Ikramullah.

Conventions.

63. Convention concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction and in agriculture.

25th Session (Geneva, 1939): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E.—Mr. M. L. Duhanukar; W.—Mr. R. S. Nimkar; Secretary—Mr. M. Ikramullah

Conventions.

64. Convention concerning the regulation of written contracts of employment of indigenous workers.

65. Convention concerning penal sanctions for breaches of contracts of employment by indigenous workers.

66. Convention concerning the recruitment, placing and conditions of labour of migrants for employment.

67. Convention concerning the regulation of hours of work and rest periods in road transport.

A = Unconditional ratification.

B = Legislative or other measures passed since the adoption of the Convention.

C = Legislative or other measures anterior to the adoption of the Convention by the Conference.

D = Legislation passed.

E = Legislation in progress or in preparation.

India has ratified the following Conventions unconditionally: (1) Hours of Work in Industries; (2) Night Work (Women); (3) Night Work (Young Persons); (4) Right of Association (Agriculture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Inspection of Emigrants; (11) Marking of Weight (Packages transported by vessels); (12) Night Work (Women) (Revised). India's ratification of the Unemployment Convention has lapsed. In addition, legislative or other measures were passed in India with reference to the application of the following conventions: (1) Hours of Work (Industry); (2) Night Work (Women); (3) Night Work (Young Persons); (4) Right of Association (Agriculture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Seamen's Articles of Agreement; (11) Marking of Weight (Packages Transported by Vessels); and (12) Night Work (Women) (Revised). In addition, legislation is either in progress or under preparation in connection with the following Conventions: (1) Minimum Age (Sea); and (2) Unemployment Indemnity (Shipwreck).

The Twenty-Sixth Session of the International Labour Conference which had been fixed for Monday, the 3rd June 1940 has been postponed *sub-sequenter*, on account of the War. But, approving the recommendations made in two reports of its Emergency Committee, the Governing Body of the International Labour Office has decided that even during the period of the war,

the I.L.O. should endeavour to maintain the fullest possible activity and function in its present premises at Geneva unless this proves impossible. The Indian Branch of the I.L.O. of which Dr. P. P. Pillai, Ph.D. is the Director will therefore maintain its activities uninterrupted and continue to function in its office at New Delhi.

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS.

The central co-ordinating authority in India for questions connected with labour in most industries is the Department of Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway work-shops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act, the central executive authority for which is the Department of Labour; but, apart from the control which this Department and the Provincial Governments exercise over railway workshops and running sheds, all classes of railway labour are under the control of the Railway Board which is itself under the control of the Department of Communications. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were central subjects whereas industrial matters included under the head 'Factories' and 'welfare of labour' fell within the scope of the provincial legislatures and although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the local Governments who have to bear the entire cost of administration as it is not permissible under the constitution, for the central Government to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the local Governments to labour measures on which their views have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the central legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control and, secondly these Acts in most cases reserve certain power to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The central Government in the Department of Labour however maintains control in connection with the Indian Mines Act,

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration, and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development, the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. The whole question was discussed throughout the various Round Table Conferences which were held in London in connexion with the new reforms and Mr. N. M. Joshi who represented the interests of Indian Labour at these conferences pressed that as far as possible labour legislation should be a federal subject. Owing largely to Mr. Joshi's efforts, the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

- (1) Factories; regulation of the working of mines, but not including mineral development;
- (2) Welfare of labour; provident funds; employers' liability and workmen's compensation;
- (3) Trade Unions; industrial and labour disputes.

THE CENTRAL GOVERNMENT.

Reference has already been made to the establishment by the Government of India of a special Labour Bureau in 1920 and to the abolition of this office in 1923 in pursuance of a recommendation made in the matter by the Indian Retrenchment Committee. The Department of Labour has, however, endeavoured to carry on as much as possible of the work of that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all-India enquiries into wages and conditions of employment in Indian industries. The present executive staff of the Department of Labour is as follows:—

Member-in-charge The Honourable DIWAN RAJINDER SINGH A. RAMASWAMI MUDALIAR, K.T. (This member also holds the Commerce Portfolio)

Secretary: The Honourable Mr. M. S. A. HYDARI, C.I.E., I.C.S.

Deputy Secretary: H. TOLNELL BARETT, I.C.S.

Under Secretaries: P. MADHAVA MENON, I.C.S. and D. H. CROFTON, I.C.S.

BENGAL.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws generally were administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency as well as of labour organisations. From time to time as circumstances required it was intended that he should conduct special enquiries but owing to financial stringency, Government could not provide him with adequate staff for the purpose. The Intelligence Officer was also the Deputy Secretary to the Government of Bengal in the Commerce Department and after the coming into effect of the Trade Unions Act, 1926, he was also appointed Registrar of Trade Unions. The Royal Commission on Indian Labour recommended that Bengal should have a properly staffed Labour Office on the same lines and with at least the same staff as the Labour Office of the Government of Bombay, but owing to financial stringency, it was not possible to give effect to this recommendation earlier than 1939; but in order to cope with the increased administrative work in connexion with matters relating to Labour, the Government of Bengal have now appointed a whole-time Labour Commissioner who will be relieved of all work in the Secretariat. An Assistant Commissioner of Labour has also been appointed. The Labour Commissioner and the Assistant Labour Commissioner have also been appointed as Conciliation Officers under the Indian Trade Disputes (Amendment) Act. Besides promoting the settlement of strikes and lockouts, they will also enquire into and settle other minor disputes. The Labour Office of the Government of Bengal has now been reorganised and three Labour Officers have also been appointed.

Government in the Agriculture and Industries Department have appointed an Employment Adviser who is a member of the Indian Civil Service, to investigate the problem of unemployment and to suggest remedial measures. His work, which is not yet complete, is expected to yield results of considerable value. An inquiry into the family budgets of industrial workers is about to be taken up by the Board of Economic Enquiry, Bengal. A very small test survey was done between September 1939 and January 1940 to prepare a detailed scheme and estimate for the larger enquiry. The test survey was intended primarily to ascertain the difficulties and the problems which have to be faced in conducting a large scale inquiry. The larger family budget inquiry is intended for the preparation of some sets of cost of living index numbers for the industrial workers of the principal zones of the Province.

The Workmen's Compensation Act is administered by the Commissioner for Workmen's Compensation who is also the authority under the Payment of Wages Act, 1936. The Indian Mines and the Trade Disputes Acts and the Bengal Workmen's Protection Act, 1934, are administered by the Commerce Department which since the 1st April 1937 has been renamed the Commerce and Labour Department.

The growth of healthy trade unionism has received much attention and rules to regulate the recognition of bona fide trade unions have been framed. An amendment of the Bengal Trade Union Regulations to empower the Registrar of Trade Unions to exercise greater control over registered trade unions with a view to the prevention of mal-administration of their affairs, so often complained of, is also under consideration. A Bill to regulate employment in shops and another to amend the Bengal Workmen's Protection Act are also being considered by Government.

The only action taken by the Government of Bengal under the Indian Trade Disputes Act during the year 1939 was the appointment of a Court of Inquiry appointed in connection with a strike at the New Central Jute Mill which began on 18th May and ended on 24th May 1939.

Minister-in-charge of Labour: The Honourable MR. H. S. SCHRAWARDY.

Joint Secretary, Commerce and Labour Department: K. G. MUKHERJEE, I.C.S.

Labour Commissioner and Registrar of Trade Unions: W. A. S. LEWIS, I.C.S.

Assistant Labour Commissioner: KHAN SAHIB S. A. E. B. MUKHERJEE.

Commissioner for Workmen's Compensation Act and Authority under the Payment of Wages Act: S. N. MODAK, I.C.S.

Labour Officers: A. TALEB, K. M. AZAD, and S. B. DATTA.

Chief Inspector of Factories: J. B. MCBRIDE, A.M.I. (Mech.) E., O.B.E.

Certifying Surgeon: H. C. G. POWNES.

MADRAS.

The Government of Madras appointed a Labour Commissioner in the year 1920 primarily to organise and control the operations for the betterment of the condition of the Depressed Classes in the Madras Presidency, especially in regard to provision of water supply, assignment of lands, acquisition of house sites, education through special schools and grant of assistance in the form of scholarships and boarding grants. The administration of Criminal Tribes Settlements was also placed under him. He was also to watch and study at all times the conditions of labour, particularly industrial labour, throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The duty of settling labour disputes by negotiation before their culmination in strikes or lockouts or after is now entrusted to him by the Government in an increasing measure. He is consulted by both labour organisations and employers.

in regard to Trade Union Law, the Factories Act, the Payment of Wages Act, and the Madras Maternity Relief Act. He is appointed, Chief Inspector of Factories, Commissioner for Workmen's Compensation and Registrar of Trade Unions, and is also responsible for the administration of the Payment of Wages Act and the Madras Maternity Relief Act. For the administration of the Factories Act he has a Technical Personal Assistant at headquarters who is also in charge of the Madras Factories Circle. The Labour Commissioner in Madras has no special statistical office to deal with Labour statistics and no reports have been published of any special enquiries into questions connected with industrial labour in the Presidency. The conduct of the Quinquennial Census into Agricultural wages has been placed in his hands, and with the introduction of the Payment of Wages Act, a beginning has been made for a more accurate collection of industrial wages statistics for inclusion in the Factories Act Administration Report.

The Labour Office in Madras published a very interesting Report of an Enquiry into the Family Budgets of Industrial Workers in Madras City in 1938 and another Report entitled "Madras Labour—July 1937 to October 1938" in 1939.

Adviser to H. E. The Government Labour: T. G. RUTHIRIOOD, C.S.I., C.I.E., I.C.S.

Commissioner of Labour: V. RAMAKRISHNA, I.C.S. (This officer is also Commissioner for Workmen's Compensation, Registrar of Trade Unions, Chief Inspector of Factories and the authority under the Payment of Wages Act.

Labour Conciliation Officer: L. U. DAMODARAM. (This Officer is stationed at Coimbatore).

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well-being of the industrial labour employed in the Province; and the real pioneer work in the field of labour information and statistics in India during the last nineteen years has been done by the Bombay Labour Office which was established in 1921 by Lord Lloyd, then Governor of Bombay. In the Government resolution announcing the establishment of this office the following were declared to be its functions—

"(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters;

"(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and

"(3) *Legislation and other matters relating to Labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of a Director of Labour. The post of the Director of Labour was however abolished in 1926 and the Labour Office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to "Commissioner of Labour and Director of Information." With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Mr. J. F. Gennings, C.I.E., C.B.L., Barrister-at-law, held charge of the work of the Labour Office from July 1926 to the 10th May 1930 when he went on leave preparatory to retirement. With the departure of Mr. Gennings, the posts of the Commissioner of Labour and Director of Information have been separated and the Information Office was placed in charge, first of the Public Relations Officer and later of a new Director of Information. Under the Bombay Industrial Disputes Act, 1938, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator. In addition to the Commissioner there are four gazetted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth is the Assistant Commissioner of Labour at Ahmedabad. There are also three full time lady investigators but these are not gazetted appointments. The office staff contains three Statistical Superintendents, four senior clerks, thirteen junior clerks, two stenographers, one typist, one cashier, one despatcher and one dattari. The activities of the office comprise (1) prices and cost of living, (2) Wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette* and (12) library.

The *Labour Gazette* has been published monthly since September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Province of Bombay, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which thoughtful-interest in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which

the work and publications of the International Labour Office have been made regularly available to people in India.

In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale price index numbers for Bombay and Karachi, retail food prices for five important centres in the Province of Bombay, for industrial disputes and for workmen's compensation, prosecutions under the Indian Factories Act, and the employment situation. Quarterly information is collected with regard to all known trade unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months.

A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodicals received from Labour Ministries, and International and research organisations in various parts of the world.

The present staff of the Department is as follows:—

Address to H. E. The Governor on Labour: Sir GILBERT WILLS, K.C.I.E., C.I.L., C.S.I., I.C.S.

Industrial Court: President. The Hon'ble Mr. Justice H. V. DIWATA; *Members.* G. S. RAJAPPAKSHI, I.C.S., District and Sessions Judge, Ahmedabad, and B. K. DALVI District and Sessions Judge, Sholapur.

Commissioner of Labour, Commissioner for Workmen's Compensation and Registrar of Trade Unions.—D. S. BAKREI, I.C.S.

Honorary Commissioners for Agencies to Industrial Labour: GULZARILAL NANDA, M.A., LL.B., M.L.A.

Registrar of Unions, Bombay Industrial Disputes Act. N. A. MEHRBAN, M.B.E., F.S.S.

Labour Officers: M. P. LARGI CHARUQUE, I.P. (for the Local Areas of Bombay City, Bombay Suburban District and Thana with headquarters in Bombay); A. S. BANAYAKHAR (for the Local Areas of Ahmedabad, Viramgam, Nadiad, Broach, Surat, and Gogha with headquarters at Ahmedabad); M. S. WARTY (for the Local Areas of Jalgaon, Dhulia, Chalisgaon, Malegaon and Amlihar with headquarters at Jalgaon); and S. S. RICE (for the Local Areas of Sholapur, Purna, Harsi, Tikekarwad, Huldhi, Belgaum, Gokak, Gadag, Satara and Karad with headquarters at Sholapur).

Assistant Commissioners of Labour: S. K. DESHPANDE, M.B.E., B.I.R.T. (Osor); N. A. MEHRBAN, M.B.E., I.C.S.; S. A. JOSHI, B.A. (Amlihar); and A. S. IVANKAR. Mr. Ivankar is stationed at Ahmedabad. Mr. Joshi is also Assistant to the Registrar of Trade Unions.

Chief Inspector of Factories: T. W. JOHNSTONE, O.B.E.

Labour Welfare Officer: E. J. S. RAM.

Lady Welfare Worker: Miss P. G. DAVID.

PUNJAB.

In the Punjab, the Director of Industries ordinarily looks after all necessary matters in connexion with Labour. He is also the Registrar of Trade Unions. The Workmen's Compensation Act is administered by the Senior Sub-Judges at Lahore, Ferozepur, Amritsar, Lyallpur, Ambala, Multan, Rawalpindi and Sargodha and by the Deputy Commissioners in the other Districts.

Retail prices of articles of food, clothing, fuel and lighting and certain miscellaneous goods entering the family budgets of industrial workers in the Punjab and working class cost of living index numbers are published monthly in the *Punjab Government Gazette*. Annual figures are published in the form of a report by the Board of Economic Enquiry. During the year 1938 the Government of Punjab adopted a three year plan for a complete industrial survey of the Province.

At the end of 1938, the Department of Industries undertook an industrial survey of the Province for which special staff was appointed. Surveys of certain districts as well as of certain industries on a Provincial basis are reported to be nearing completion. Reports of these surveys will be published in due course. The personnel of the administrative staff of the Government of Punjab dealing with matters connected with Labour is as follows:

Minister for Development and Labour: The Hon'ble SRI CHAUDHRI CHHOTU RAM.

Secretary to Government for Labour: S. K. KIRPALANI, I.C.S.

Director of Industries and Registrar of Trade Unions.—RAI BAHADUR LALA RAM LAL, M.B.E.

Chief Inspector of Factories: W. H. ABEL

CENTRAL PROVINCES.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies. The Factory Office is also under his general supervision. As regards the question of administration in connexion with labour and labour legislation, a separate Labour Office has been established under the charge of a Labour Officer who is also an Inspector of Factories in addition. He investigates into labour disputes, collects necessary statistics and works as a Conciliation Officer in case of trade disputes. The C. P. Labour Office is, at the moment we go to Press, engaged in conducting the wage census of the cotton textile industry. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board but the Board acts purely in an advisory capacity.

Address to H. E. The Governor on Labour. SIR GEOFFREY POWNALL BURTON, K.C.I.L., I.C.S.

Director of Industries. K. D. GUHA, M.Sc. (I. phd).

Registrar of Trade Unions. D. V. RAO, I.C.S.

Chief Inspector of Factories. P. T. KOMAR NAYAR

Labour Officer. Ramesh P. K. SEN, B.Sc. (Edin.)

UNITED PROVINCES.

In the United Provinces almost all departments of the local Government dealt with various phases of questions connected with labour up to the end of 1934. Labour as such was with the Home Member, electricity was with the Finance Member, the factory inspection staff was under the control of the Director of Industries, boiler inspection was under the control of the Public Works Department. The Registrar of Co-operative Societies was appointed ex-officio Registrar of Trade Unions. In 1935, however, a more unifying policy was adopted and the Director of Industries was appointed Director of Statistics and ex-officio Commissioner of Labour for the general administration of all questions connected with labour. The assumption of office by the Congress in this Province on July 19th 1937 was heralded with serious labour troubles in Cawnpore. The Hon. the Prime Minister announced his intention to appoint a special officer to deal with labour disputes as they arose from day to day and to bring forward legislation on the lines of the Bombay Trade Disputes Conciliation Act, 1934. Dr R. B. Gupta, M.A., Ph.D. (Lond.), was appointed Labour Officer in August 1937 to settle industrial disputes and to act as a welfare officer in the broadest sense of the term.

Following the recommendations of the Cawnpore Labour Inquiry Committee, Mr P. M. Khareghat, C.I.K. I.C.S. Secretary to Government in the Department of Industries, was appointed Labour Commissioner in addition to his own duties about the middle of the year 1938. The Labour Commissioner was to visit Cawnpore every week and endeavour, through conciliation, to get the parties concerned to settle the industrial disputes referred to him. The services of Mr Khareghat having been placed at the disposal of the Government of India on his appointment as the Vice-Chairman of the Imperial Council of Agricultural Research, Mr Vishnu Sahay, I.C.S., Conc. Commissioner, was appointed Commissioner of Labour in addition to his own duties in March 1939. Thereafter, until 17th April 1940 the post of Commissioner of Labour was held by Mr A. N. Sapru, I.C.S. Director of Industries, in addition to his own duties. The Government of Punjab have now appointed a full-time Commissioner of Labour who, like the Commissioner of Labour in Bombay, is to hold all the statutory appointments connected with Labour. An enquiry into family budget and housing conditions of mill workers in Cawnpore was conducted by the Labour Officer in 1938-39 and more than 4,000 budgets were collected with the help of six investigators. The results of the enquiry are in progress of compilation. The personnel of the Labour Department in the U.P. is as follows:

Address to H. E. The Governor on Labour. DR. PANNA LAL, C.I.L., I.C.S.

Labour Commissioner Registrar of Trade Unions, Conciliation Officer for Workmen's Compensation and Officer-in-Charge of the Factories and Boiler Departments. S. S. HASAN, I.C.S.

Chief Inspector of Factories and Boilers. K. K. RATILWALA, M.A. MR. L. A. INSI, NAYAL

Labour Officer. Dr R. B. GUPTA, M.A., Ph.D. (Lond.)

Honorary Chief Officer of Government Labour Welfare Centres. PANDIT SURAT PRASAD, Assistant, M.L.A. Municipal Commissioner Cawnpore.

SIND.

Sind, since its separation from the Bombay Presidency, has modelled its administration of all labour questions on Bombay and the Government of Sind have appointed a Commissioner of Labour who is also Registrar of Trade Unions. The Labour office compiles Monthly Price Index Numbers of wholesale and retail prices in Karachi. It also compiles annual index numbers of agricultural wages and retail prices in Sind. An unemployment Committee with the Assistant Director of Industries as its Secretary was appointed by Government in 1938. The posts of Chief Inspector of Steam Boilers and Smoke Nuisances and Inspector of Factories are held by one officer in Sind who is also an Inspector under the Payment of Wages Act. Further, all District Magistrates in Sind have been appointed Inspectors under that Act. The Workmen's Compensation Act is administered by the sub-judges in the mofussil and the Judge of the Small Causes Court in Karachi who have been appointed ex-officio Commissioners for Workmen's Compensation in Sind.

Minister for Labour. The Hon. the Mr. G. M. SAYEED.

Commissioner of Labour and Registrar of Trade Unions. M. A. SAYEED, B.A. (Oxon.).

Chief Inspector of Factories and Boilers. A. J. TUTTLEB, A.M.I.E.

BIHAR.

The Government of Bihar have recently begun to take a very live interest in all matters connected with labour. It will be remembered that the Bihar Government appointed an influential committee in the year 1937 to make a comprehensive survey of labour conditions in the Province. The Report of this Committee has been submitted to Government and is under examination. It is expected to be released for publication about the end of July. During the year 1939, the Government of Bihar appointed three special tribunals in connection with major disputes in the Province. (1) Mr. S. R. Zaman, I.C.S., District Magistrate, Patna, was appointed an Arbitrator in a dispute between the Patna Electric Supply Co., Ltd. and its workmen; (2) Mr. J. G. Shearer was appointed Sub-Member of a Board of Conciliation constituted under the Trade Disputes Act, 1929, to effect a settlement between the Tobacco Manufacturers (India) Ltd. of Meerhar and the workmen of the Company over the discharge and the proposed retrenchment of considerable bodies of

workers, one on the ground of increased mechanisation of the plant and the other on the ground that the numbers employed were in excess of actual requirements : and (3) Rai Bahadur B. P. Panda, Labour Commissioner, was appointed an arbitrator in the dispute between the South Bihar Sugar Mills Ltd. and its workers on the question of the refusal of the Company to re-engage a number of workers on the re-start of the Company's plant after the seasonal stoppage during the monsoon. In the last case substantial amounts as compensation and sympathetic gratuities were awarded to a large number of workers. The personnel of the Labour Department of the Government of Bihar is as follows :—

Adviser to H. E. The Governor on Labour : R. E. RUSSELL, C.I.E., I.C.S.

Commissioner of Labour : Rai Bahadur BHUBANESHWAR PRASAD PANDY.

Labour Assistant : V. SHUKLA

Registrar of Trade Unions : Rai Bahadur N. N. DAS.

Chief Inspector of Factories : H. M. RAI.

OTHER PROVINCES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the local Government are not very actively interested in the special consideration of other labour questions. Labour conditions in Orissa, Assam, and the North-West Frontier Province are not considered such as to justify the appointment of Labour Commissioners. In Orissa, the Revenue Commissioner (E. R. Wood, C.I.E., M.C., I.C.S.) is the Registrar of Trade Unions. In the North-West Frontier Province, the Secretary to Government in the Legislative Department has been entrusted with the work of industrial and labour disputes and Khan Sahib SHEIKH ABDUL HAMID KHAN is the Registrar of Trade Unions. In Assam S. K. GHOSH, I.C.S., is the Controller of Emigrant Labour but as no Trade Unions have as yet been registered in the Province there is no Registrar of Trade Unions functioning but for purposes of the Act, the Registrar of Joint Stock Companies is ex-officio Registrar of Trade Unions. In Ajmer-Merwara, the Assistant Commissioner, Ajmer, (AKHAR HUSAIN, I.C.S.) is Registrar of Trade Unions.

LABOUR IN INDIAN STATES.

During recent years there has been a growing tendency among employers in British India, especially in the cotton textile industry, to complain that certain capitalists are endeavouring to avoid the restrictive conditions imposed on them and the ameliorative benefits granted to labour by Labour Legislation in British India by establishing mills or factories in the territories of Indian States. Whilst it may be true that many of the smaller States have no labour legislation of any kind, it is interesting to observe that most of the larger States such as Hyderabad, Baroda, Gwalior, Mysore, Indore, Travancore and Cochin have recently achieved notable progress in bringing factory conditions in these States into line with those in British India. We give a brief resume of the measures adopted in some of these States below.

BARODA.

The total number of registered factories in the Baroda State on the 31st July 1931 was 149 of which 130, employing 31,315 operatives consisting of 28,761 men, 5,390 women and 162 children, were under actual operation. This count was based on the enumeration of concerns employing more than 30 persons. A recent amendment of the Baroda Factories Act, however, applies the Act to all concerns employing more than 20 persons and it is expected that, on this basis, the number of factories will be nearly doubled. The following British India Acts have been adopted in the Baroda State without any material change with effect from the years shown against each : Workmen's Compensation Act 1923, with all the Amending Acts and Rules since 1941 ; Trade Disputes Act 1929, since 1938, and the Trade Unions Act 1926, since 1938. The State Factories Act is on the lines of the Indian Factories Act except

with regard to the hours of work which are 60 per week but it is of interest to observe that 10 out of 16 cotton textile mills situated in the State are working a 54 hour week. The Bombay Maternity Benefit Act, 1929 was applied from 1936 with a difference in the rate of benefit which in Baroda is at a flat rate of six annas instead of 8 annas in British India. The Payment of Wages Act, 1936, was brought into effect from 11th April 1940 with the difference that wage payments are to be made before the expiry of ten days after the last day of the wage period. The State has had a Mines Act containing provisions in regard to health and safety of workmen employed in mines since 1908.

The Government of Baroda created a post of a Labour Officer in 1938. This officer has been entrusted with the work of bringing about settlements in disputes with the employers and the employed, to study comparative labour laws, to keep in touch with employers and to organise co-operative societies, reading rooms and other institutions for the benefit of labour with the help of employers. The Government has initiated an inquiry into the general financial condition of cotton mills in the State and the conditions of labour employed in them with special reference to recruitment, wages, hours of work, welfare activities, efficiency, etc. Information for two centres has already been collected and that for other centres is in process of collection. Four unions of textile workers with a total membership of 5,147 have been registered under the Baroda Trade Unions Act. The policy of the Government towards trade unions is the same as that of the Government of India. The Director of Industries and Labour is in charge of all administration connected with Labour. The personnel of the Department is as follows :

Director of Industries and Labour : DR. CHAMPALAL A. MEHTA, M.A., LL.B. PH.D.

Labour Officer : BALVANTRAIS. DESAI, B. AG.

Inspector of Builders and Factories : HIRENDRA NATH RAY.

INDORE.

Labour Legislation in the Indore State is formulated much along the same lines as that in Baroda but Indore, in addition to all the laws adopted in Baroda, passed the Indore Trade Disputes Conciliation Act in 1935 modelled on the lines of the Bombay Trade Disputes Conciliation Act of 1934 in addition to its adoption of the Indian Trade Disputes Act of 1929. Except for the Factories Act which was passed in 1929 all the other Acts were passed between 1935 and 1939. The total number of factories in Indore State on the 31st March 1940 including flour mills and other minor industrial concerns was 467 employing 27,959 workers of whom 22,716 were men, 4,481 women and 762 were children. The Indore Trade Unions Act and the Rules made thereunder are so designed as to ensure that no disorganised and *ad hoc* unions which almost always harm rather than help the cause of labour should spring up. On the other hand, the forming into existence of well organised and truly representative bodies which might be of some service to their members is always welcomed by Government. The Government of Indore in co-operation with the Statistical Institute, Calcutta, is tackling the question of collecting family budgets of industrial workers in the State with a view to the compilation of a Cost of Living Index for Indore. The Commissioner of Customs, Commerce and Industries assisted by an Inspector of Mills and Factories deals with matters relating to Labour

TRAVANCORE.

On the 31st March 1940, Travancore State had an industrial population of 37,271 persons in employment distributed as follows, 18,643 persons consisting of 13,930 men, 2,397 women and 2,308 children employed in 148 factories controlled by the Travancore Factories Act,

14,042 persons consisting of 2,013 men, 10,131 women and 1,898 children in 22 cashewnut factories, and 4,529 men employed in factories which come under the Mines and Minerals Act. The State has already adopted legislation for the regulation of hours and conditions in factories and in mines, for the payment of workmen's compensation, for the registration of trade unions and for the settlement of industrial disputes. A Bill for the Prompt Payment of Wages and for controlling Deductions from Wages in respect of Fines has been published for introduction in the State Legislature. It is worthy of note that whereas the Baroda and the Indore Factory Acts permit a 60 hour week in perennial factories, the Travancore Factories Act has adopted a 54 hour week as in British India.

Inquiries were conducted by the Government of Travancore into wages and family budgets of workers in the Mats and Matting Industry during the years 1938 and 1939. The results of these inquiries have been incorporated in the Report of the Board of Conciliation appointed by the Government in connection with trade disputes in this industry. The Board consisted of Mr. K. George, Land Revenue and Income Tax Commissioner as Chairman and Messrs. N. G. Hayden, N. S. Munnar, P. N. Krishna Pillai and V. K. Achuthan as Members. The Board's Report which runs into 240 pages and which was published at the end of the year 1939 is a most interesting document and copies of it can be had from the Superintendent, Government Press, Trivandrum.

Twenty four unions in all have been registered under the Travancore Trade Unions Act. The policy of the Government is to encourage unions of industrial employees provided they work within the limits placed on them by the State Laws and create harmonious co-operation between Capital and Labour. The personnel of the Labour Department is as follows :

Commissioner of Labour : C. KUMARA DAS, B.A., M.Sc. (Lpool), F.I.C. (London).

Chief Inspector of Builders and Factories : A. R. KRISHNA IYER, M.E.

Inspector of Mines : V. MAHADEVAN.

Similar information to that given above with regard to other States was not available by the time we went to Press.

NEW & REVISED EDITION

SANITATION IN INDIA

THE 4th edition of Dr. Turner's manual on Municipal Sanitation in India. Every chapter revised. Valuable statistics. Entirely new sections dealing with "Food", "Malaria and Mosquitoes", "Air and Ventilation", "Soils and Building Sites", "Village Sanitation", have been incorporated in this new edition. Several new illustrations. Indispensable to Public Health Officers, Municipalities, Local Boards, Medical and Sanitary Students, Etc.

CIVIL AVIATION.

The development of internal air services in India was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was purely a Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which an airmail service was likely to be used by the public. It was closed down as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances has already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. (now Sir Francis) Sheldermine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member for sometime strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of Civil Aviation in India was only a matter of time.

The reflection of this foresight is mirrored today in the organisation of the trunk air lines of India. The aerodromes and landing grounds on the main air routes are controlled by Indian Aerodrome Officers who are responsible for their safe operation, while the flying personnel on the internal air route is 90 per cent. Indian. On the engineering side Indians are now taking their place not only as Assistant but as Chief Ground Engineers to internal operating Companies and are already finding their way to responsible positions as Aircraft Inspectors with the Directorate of Civil Aviation.

Development of Indian Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was on 30th December, 1929, extended to New Delhi, mails from and for Europe being carried to and for each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonging to them but to the Government of India, Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative

course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment pending the development of a permanent scheme. Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spare work carried out by Col. Sheemurine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India should be Indian in character, either through the development of private enterprise or through the institution of Government owned services.

The acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy. The machine continued in Their Excellencies' service until 1934, when a new up-to-date aeroplane was purchased for their use and their old one was retained for the use of senior Government officials.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company called The Indian Trans-Continental Airways, Ltd., was formed with a rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways, Ltd. held 51% of the shares. Indian National Airways, Ltd. 25 per cent and the Government of India 24 per cent. This company then operated jointly with Imperial Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways Ltd. was established largely through the efforts of Mr. R. E. Grant, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily

service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi to link with Imperial Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to lack of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras connecting at Karachi with the London-Karachi service. From the beginning of 1935, Imperial Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second trans-India service was extended to Australia in 1936.

Empire Air Mail Scheme.—The initiative in this development was taken by His Majesty's Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on the 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder air mail services in India, i.e., Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July 1938 and all first class mails to Empire participating countries were conveyed by air. The Empire Air Mail scheme was suspended in September, 1939, on the outbreak of the War with Germany, but a restricted service was maintained until June, 1940, when on Italy's entry into the war, all mails to the United Kingdom were totally suspended.

Internal air services.—In 1937 Messrs. Tata Sons, Ltd., established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. At present, the service runs twice weekly during the cold weather season (October to May). Besides this Tata Sons have extended their Bombay-Trivandrum service to Trichinopoly where it connects with one of the four main services to Colombo. This service is also operated seasonally during the fine weather months. Surcharged air mails are carried on both services.

The Air Services of India Ltd., Bombay, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The service operates during the hot weather months and is at present scheduled to run six times weekly in each direction. It also now runs a Kathiawar-Cutch service three weekly, a Karachi-Kathiawar service twice weekly, and a Bombay-Poona-Kolhapur service twice weekly. Surcharged mails are carried on these services.

The Indian National Airways run two services, viz. Delhi-Lahore-Kanpur and Kara-hi-Calcutta via Lahore, and Delhi the former once a week, the latter twice a week, in each direction.

The K L M (Dutch) and Air France (French) services are now discontinued owing to the war.

Instruction in Aviation—It is satisfactory to note the speed with which young Indians have qualified themselves in almost every sphere of commercial aviation, considering the high qualifications, long and expensive training and paucity of facilities for this training in India itself. At one time it was essential for instructors to be trained in England but now it is possible for this training to be obtained in India. It must still be recognised that certain forms of advanced training are not yet available in India although Government has recently arranged a limited amount of training for specially selected pilots on the Government owned Avro A three engine aeroplane. The training at Aerodrome Officers' also is now carried out in India at Karachi Air Port under the supervision of the Chief Aerodrome Officer.

Flying training is given in India through Clubs. There are ten flying clubs in all, namely:—The Bengal Flying Club (Dum Dum), Bombay Flying Club (Juhu), Delhi Flying Club (New Delhi), Karachi Aero Club (Karachi Air Port, Brigh Road), Northern India Flying Club (Lahore), United Provinces Flying Club (Cawnpore and Lucknow), Madras Flying Club (St. Thomas' Mount), Jodhpur Flying Club (Jodhpur), Hyderabad State Aero Club (Begumpet, Hyderabad), and Jaipur Flying Club (Sanganer). The first seven of these clubs are subsidised by Government.

The club movement dates from March 1927, when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt. M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India and Burma was formed. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed. The formation of four local flying clubs followed. In December, 1927, the Government of India received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the clubs' income and expenditure until the grants became available. This offer the Government accepted and further decided that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. The grants commenced on 1st April, 1928.

Three more clubs were started later, the Northern India, the U.P. and Madras, and seven clubs are now subsidised.

Subsidy to Flying Clubs—It has become increasingly evident in recent years that saturation point was being reached in the entry of new pupils able to afford the cost of learning to fly at the prevailing rates. An endeavour has been made to bring about a small measure of improve-

ment in the new scheme of subsidy to the seven clubs in British India which came into operation on 1st April 1929 for a period of three years. Bonuses of Rs. 100 and Rs. 50 are paid (cheapening the cost of flying to the individual and so tending to promote a revival of interest in private flying as a sport) the scheme is also designed to encourage the clubs to equip themselves with more modern types of training aircraft. The subsidy which is limited to a maximum of Rs. 25,000 per annum clublet, Rs. 25,000 to each club is divided into two parts as shown below:—

(1) *Fixed Annual Subsidy*—A fixed payment is made to each club according to the number and types of aeroplanes maintained to the use of members on the following scale:

No. of aeroplanes.	Class A (over 120 H.P.)	Class B (between 75 and 120 H.P.)	Class C (below 75 H.P.)
	Rs.	Rs.	Rs.
1	10,000	8,000	6,000
2	12,000	9,500	7,000
3	14,000	11,000	8,000
4 or more	16,000	12,500	9,000

Whereas the previous scheme provided a fixed subsidy for the maintenance of aircraft up to a limit of three, under the new scheme the number is raised to four. Aircraft are reclassified each year. The horse power is a general guide, but such factors as obsolescence of the type of aircraft and general utility for training purposes are also taken into account.

(2) *Bonus for pilots trained*—subject to a maximum payment of Rs. 9,000 a year for each club, a bonus of Rs. 300 is paid for each new pilot trained *ab initio* for an 'A' licence on club aircraft and Rs. 100 for each 'A' licence renewed with a minimum of five hours' flying on club aircraft (provided that the pilot does not hold a higher category of licence). From these bonuses payments of Rs. 100 and Rs. 50 respectively are made to the pilots as already mentioned, in the case of British subjects and the subjects of Indian States only. Bonuses at the above rates are also paid to the Jodhpur Flying Club.

In the Year 1928-29, the last year of the previous subsidy scheme, it was again found that the clubs were unable to earn the maximum grants permissible under the subsidy agreements. As in previous years, this situation was met by granting a bonus on flying hours in addition to the payments made for pilots' 'A' licences issued and renewed.

Purchase of Tiger Moths—In order to assist the clubs in modernising their equipment and to meet the need for a large reserve of modern training aircraft in India, the purchase of seven Tiger Moths has been sanctioned, one of which will be issued on loan to each of the seven subsidised clubs. The cost of the seven aeroplanes will amount to Rs. 1,20,000. The Tiger Moth is a type widely used by the Royal Air Force for *ab initio* training and is already in use by a number of the clubs in this country. It has the particular advantage that it is simple

to repair and maintain and spare parts are readily obtainable. The aircraft will be complete with blind flying and night flying equipment for advanced training.

The Indian Gliding Association.—At Brabourne Stadium, Bombay, which was established in 1931, its plans in hand for fortnightly instructional courses in gliding and soaring. The course is designed for the benefit of those who are willing to devote a holiday to learn to glide or, already qualified pilots, to add as much as possible to the quality and quantity of their flying.

Aero Club of India and Burma.—The Aero Club of India and Burma, besides being the parent club to which the flying clubs are affiliated, is also the representative in India of the Federation Aéronautique Internationale, the Royal Aero Club of Great Britain and the Automobile Association. The Aero Club also serves the private aviator in connection with customs, carnets, diplomatic permits, licences for the carriage of arms and camera and maps for flights abroad.

Civil Aviation Scholarships.—(a) *Government of India.* Apart from the assistance given to pilots for advanced training on the Avro X, the Government gave the undermentioned scholarships:—

Pilot Instructors. A scholarship was awarded to an Indian 'B' pilot. He was given an instructor's course with the United Provinces Flying Club and has since found employment.

Transport Pilots.—An Indian 'B' licence pilot with assistance from the Government of India has completed his training in England for employment as a First Officer by Indian Trans-Continental Airways, Ltd.

(b) *Provincial Governments.*—The Government of the United Provinces has provided a sum of Rs. 5,000 for the training of 10 'A' licence pilots at half rates, of whom two will be selected to train for the commercial pilot's 'B' licence, also at half rates.

(c) *Private Bodies.*—The Trustees of the Parsee Panchayat Funds and Properties of Bombay have awarded financial assistance to two 'A' licence pilots not obtaining 'B' licences.

The Trustees of Sir Ratan Tata Trust or Bombay have awarded assistance amounting to Rs. 5,000 to two students for aeronautical training. One will be enabled to train for A, B, C and D ground engineer's licences in England. The other will receive training for the pilot's 'B' licence in India.

The Trustees of Sir Dorabji Tata Trust or Bombay have also awarded assistance to two students for technical training in England. One student has been given a grant of Rs. 3,000 and the other a grant of £300.

(d) *Public Companies.*—Two scholarships have been given by Imperial Airways Ltd. and one by Sir Hani Mehta, Vice-Chairman of Indian Trans-Continental Airways, Ltd., for a special course of training in England for Indian 'B' licence pilots with a view to their employment as First Officers.

Indian Pilots and Empire Air Mail.—In 1935, Imperial Airways sent an Indian 'B' licence pilot to England for advanced training

with a view to his employment as a First Officer. This pilot was given further training by Government in 1938 in the Avro X Aeroplane on his return to India. He was confirmed in his appointment as a First Officer, but subsequently resigned. Pursuing the policy of training selected Indians as First Officers for the Imperial air mail routes Government gave assistance in 1935 to another Indian, but he did not complete his course. In 1936 assistance was given by Government to a third Indian who has completed his training. Early in 1939 a selection was made of three Indian 'B' licence pilots for training in England. Two of these are receiving scholarships from Imperial Airways and the third from Sir Hani Mehta. Vice-Chairman of Indian Trans-Continental Airways Ltd. Imperial Airways intend to offer these pilots employment as First Officers on completion of their training.

Advanced Training of Pilots in India.—There is no training school in India for giving advanced training to commercial pilots to enable them to obtain endorsements on the 'B' licences to fly multi-engined aircraft. Since 1937, Government has placed its three engine Avro X at the disposal of selected 'B' licence pilots for this purpose. In 1937, six pilots were afforded some degree of financial assistance for the training. Owing to the success of the scheme two further schemes were sanctioned in 1938. Under the first scheme, two pilots received training on their own expense and two at half the normal flying rate. Under the second scheme, nine commercial pilots were given 5 hours flying instruction each at Government expenses. Out of these, four were again selected for further training to complete 10 hours solo in this aeroplane. This scheme was completed early in 1939.

Wireless Operators.—Three candidates for W.T. Operator's licences received training at the Aeronautical Training Centre during 1938.

Eleven licences were issued in 1938, of which four were for operators holding United Kingdom licences. Four are provisional licences to enable the holders to secure the flying experience necessary for the issue of a regular licence. Of these 11 operators, nine are in employment.

Ground Engineers.—48 ground engineers obtained licences in 1938. Ten were trained by the flying clubs, 22 by the Aeronautical Training Centre, six in England and 10 by operating companies. The majority of these men have received training only up to the standard of the 'A' or 'C' categories. 23 of them have only the single 'A' or 'C' category. For the present, since the field for employment of ground engineers with these qualifications is limited, the flying clubs have been advised to restrict new entries of apprentices.

Aeronautical Technical Institute.—The Air Services of India, Limited, run the Aeronautical Technical Institute at Jamnagar which has provision for training a limited number of students as ground engineers according to the course prescribed for 'A' and 'C' licences and also for 'B' and 'D' licences issued by the Government of India.

Indian Air Races.—The first Indian Air race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was

very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Governor of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December 1934 to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added "Air racing like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now." The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sassoon to form an Avion Flying Fund for flying sport prizes. The fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.

The club held in February, 1936, a two-day race from Madras, via Bombay to New Delhi. Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and was regarded as having contributed in an important degree to general air-mindedness in India.

All-India Air Rally. On the 5th and 6th December 1938, an All-India Rally was held at Karachi on the occasion of opening of the newly constructed Air Port Building. His Excellency the Governor of Sind performed the opening ceremony and gave away the prizes to the winners.

All flying clubs in India affiliated to the Aero Club of India and Burma participated. The Viceroy's Cup given for the best aggregate results obtained by one of the competing clubs was won by the Karachi Aero Club. The Sir Victor Sassoon Challenge Trophy given for the best all round progress during the year was awarded to the Karachi Aero Club.

International Flights.—In 1938 there were 21 international flights to, from or across India by non-Indian Aircraft and one flight to India by an Indian Aircraft.

Two Royal Air Force aeroplanes succeeded in flying non-stop from Ismailia (Egypt) to Darwin (Australia) a distance of 7,126 miles, which was flown in just over 48 hours at an average speed of 149 miles per hour. A third machine landed owing to lack of fuel only a few hundred miles short of its destination. These flights were aided by the aeronautical wireless and meteorological services in India.

A non-stop flight in an Arado light aeroplane from Benghazi (Tripoli) to Gaya was made

at the beginning of January by the German pilots, Lieutenants Pulkowski and Jemmet. The distance covered was approximately 4,000 miles and the feat was claimed to be a record for light aeroplanes. Lieutenant Pulkowski unfortunately met his death in an accident to the aeroplane at Madras.

Two French military aeroplanes crossed India in January 1939, on their way to India-China.

Record flights were made in March 1938 by Flying Officer A. L. Clouston and Mr. A. Rickett from England to New Zealand and back, and in April 1938 by Mr. H. L. Broadbent from Australia to England.

Flying by Private Owners. While no flights by Indian private owners were noteworthy from a record-breaking point of view, three of them deserve mention. A private owner in a two-seater Humber Moth flew with a passenger from Calcutta to Batavia and back inclusive of two days' sight-seeing in Batavia and a day's halt at Singapore, only 14 days were spent on the round journey. The same return trip by boat takes about one month.

The second flight was from Lahore to Simla and back. The pilot claimed to be the first private owner to take a single engine aeroplane into Kashmir. In order to get above the clouds over the Pir Pungal Range he found it necessary to fly as high as 19,000 feet.

A third private owner flew his two-seater Miles Hawk on a business trip from North Bhat to Rangoon and back. His flying time to Rangoon was 8½ hours as against 4 days by train and boat. He stated that his actual expenses in fuel worked out to Rs. 130 for the double journey. As he and his passenger shared the expenses it cost them Rs. 65 each as against a rate by train and boat of Rs. 450.

The number of registered privately-owned aircraft on the 31st December, 1938, was 65, as against 64 on the same date in the previous year. All except ten were of British design and manufacture. Twenty were owned by Ruling Princes and Chiefs.

Ground Organisation. An additional Rs. 22 lakhs was made available for Civil Aviation Capital Works by the decision that capital expenditure on wireless works, which had been included originally in the Civil Aviation Works Programme, should be borne by the Posts and Telegraphs Department. The total amount provided for expenditure under this head in India now stands at Rs. 87.93 lakhs (86.59.47.5). The expenditure during 1938-39 amounted to Rs. 19,60,000 (23.47.00.00), making the total expenditure to the end of that year Rs. 69,21,000 (25.19.00.00).

Night Lighting Equipment. The lighting installations are continuing to give excellent service and to be used with increasing frequency. At Karachi for example the number of arrivals and departures between sunset and sunrise on regular air services increased from 163 in 1937 to 743 in 1938. Revenue from the extra fees charged for night landings at all lighted aerodromes amounted to Rs. 3,581 in 1938 as against Rs. 3,641 in 1937. The value of the free facilities given to our mail contractors in respect of such fees was Rs. 4,653 and Rs. 2,643 respectively. The Electrical and Mechanical staff which is responsible for operation and maintenance is

being recruited up to full strength and the entire work of maintaining ground lighting installations is undertaken partially. With the exception of temporary breakdowns of new beacons recently installed at Larkhana and Nawalshah on the Karachi Lahore route there have been no instances of failure of lighting equipment.

Several improvements have been made to lighting systems. At Durr Durr and Allahabad flood-lights have been resited to conform with other improvements effected to the aerodrome approaches. At Delhi Allahabad Lahore Bombay and Hyderabad (Sind) the substitution of red for orange boundary lights on sections of the aerodrome boundary which are unfavourable for take-off and landing has been completed.

Arrangements have been made with the Chief Inspector of Lighthouses for trials to be made at Karachi to determine the effectiveness of the Manora marine light as an air beacon. Karachi Airport is already provided with a location beacon or Neon type which affords guidance to pilots within a range of 25 miles, when they may be flying at a height above the beam of the Manora light.

On the Karachi-Jacobabad route the ground lighting installations at Jacobabad and Pad Idan have been completed and the airway beacons at Nawalshah and Larkhana are operating regularly. Indian National Airways have found these beacons very useful during the short days of the cold weather season when early departures and late arrivals at Karachi have necessitated a certain amount of night flying. Lighting equipment on the Karachi-Bombay route is in process of installation.

Experiments with wind and landing direction indicators. Experiments are being continued to determine the most satisfactory form of wind indicator and landing direction indicator for night as well as for day use under the particular conditions experienced in this country.

Aerodrome and route traffic control. The efficiency of the system of aerodrome and route traffic control has in the past been handicapped by the shortage of aerodrome staff, the lack of training of recently recruited staff and the incomplete state of the communication system.

On the Trans-India route the ground services are now started to provide a 24 hour watch when required whilst the developments which have taken place in wireless and meteorological facilities and the progressive improvement in methods have raised the efficiency of the organisation very considerably. The training school at Karachi is now actively at work and the staff side of the new aerodrome organisation is now in a position to obtain the specialised technical knowledge as well as the practical experience which the duties require.

Trans-India Seaplane Route Organisation. An inspection of the organisation of the seaplane route from England to Singapore to assist in reaching a decision on all outstanding problems was carried out early in 1939 by Lt-Commander A. J. Tildall of the Air Ministry. Consultations were held with the Director of Civil Aviation and Lt-Commander Tildall's report is now being considered by the Air Ministry.

It was decided after consideration of all the data and experience collected in the last two years that there is no suitable alternative to Raj Samund. Arrangements for the permanent organisation of this station are being discussed with the Udaipur Durbar.

The lighting of the Calcutta seaplane port for night operation has been completed. Schemes for night lighting at Allahabad, Gwalior and Raj Samund have been drawn up. Hitherto lighting facilities had been provided only at Karachi seaplane port.

During the cold weather months, December to February, some difficulty was experienced in connection with early departures and late arrivals of flying boats at Calcutta owing to the prevalence of morning and evening fog on the river. Arrangements were therefore made with the Director General of Observatories to station a current weather observer at Bally Reach to give immediate warning of fog formation. This precaution proved effective in keeping pilots informed of the possibility of dangerous conditions developing.

The problem still remains of finding an alternative alighting place so much less subject to influence of fog conditions that it can be relied upon to serve as an emergency base at times when Bally Reach is fog-bound. Further action in this direction will be taken in conjunction with the Air Ministry. At the request of the Air Ministry investigations have been made with regard to the selection of a permanent shore site at Bally Reach.

Wireless Services. The aeronautical wireless service now comprises eleven stations, namely—Allahabad Allahabad Bombay Calcutta, Chittagong, Delhi, Gaya, Hyderabad (Deccan), Jodhpur, Kanachi and Madras. In addition, there are three stations at Gwalior, Raj Samund and Jiwani which at present are operated by Imperial Airways, Ltd., on behalf of the Air Ministry.

The installation of new wireless equipment is still in progress both on the Trans-India route and the South India route and the process of improvement will be carried several steps further by the programme of new works sanctioned for 1939-40 at the end of which period, it is expected that the full development of the present wireless programme will be reached and a sufficient number of operators will have been trained to provide the full hours of watch demanded. A 24-hour service is now being given at D.F. stations on the Trans-India route but for the present except at Karachi the short and medium wave installations at the aerodromes will not usually be manned for more than 18 hours daily.

On the South India route the aeronautical wireless service between Karachi and Bombay on the standard aviation wave length of 900 metres is regularly used by Tata's aircraft. To relieve congestion at Karachi it is intended to adopt a wave length of 530 metres for the South India route as soon as a second medium wave transmitter and receiver have been installed there.

South of Bombay a wireless service for aviation is at present operated on the shipping wave

length of 600 metres at Madras and Colombo pending the completion of aeronautical stations at these places. Tata's aircraft operating on this section of the route are not at present equipped with wireless and the traffic consists of point-to-point messages.

Experiments are being conducted by Tata's with intermediate frequency radio-telephone apparatus installed in one of their Warcom machines with the object of determining the relative advantages of the intermediate and medium wave channels for communication by radio-telephony.

Meteorological Services.—Further improvements were effected by the India Meteorological Department in the Meteorological arrangements for aviation. New double-height pilot balloon observatories were established at Raj Samard and Gwalior to meet the requirements of the flying boat service. The pilot balloon and current weather observatory at Gwalior was transferred to Jiwani; the pilot balloon and current weather observatories at Allahabad and Alipore (Calcutta) were moved to the aerodromes and a temporary observer was posted at the seaplane base at Calcutta for the issue of special reports, particularly regarding visibility for the benefit of the flying boat service. On the Karachi-Combo route, the observatories at Bhuj, Malegaon and Hyderabad (Begumpet) began taking regular afternoon pilot balloon observations and arrangements were made for an additional pilot balloon ascent at Ahmedabad in the early morning. The observatory at Bangalore also commenced an additional daily pilot balloon observation in the afternoon.

A new aviation section has been set up at the Upper Air Office, Agra, which will be later transferred with the Upper Air Office to Delhi. This aviation section will be responsible for the organisation of the meteorological service on air routes, and, when transferred to Delhi will maintain liaison with the Civil Aviation Department.

The international codes have been adopted for all current weather reports, including reports of dangerous phenomena and improvement thereof. New editions of the pamphlet on meteorological organisation for airmen and of the Aviation Weather Codes (Pocket Card) were issued.

On the Trans-India air route the routine arrangements for the issue of forecasts, upper wind and current weather reports by W.T. to all main aerodromes and to aircraft in flight were continued. Airmen are able to refer to the latest report on Weather Notice Boards at aerodromes or to get reports by W.F. while in the air at routine times and at other times on requisition. On other routes weather reports are prepared by the Meteorological Office to suit the time-table and needs of the air services.

Arrangements have been made for the routine distribution of pilot balloon and current weather reports along the Karachi-Colombo route and the system is working satisfactorily.

Weather reports and forecasts are now supplied to Air Services of India, Limited for the Bombay-Porbander service and to Indian

National Airways Limited for the Lahore-Delhi service.

Legislation, Rules, etc.—The Indian Aircraft Act 1934 was further amended by the Indian Aircraft (Amendment) Act, 1935. The latter empowers the Central Government to take measures for the sanitary control of air navigation in emergencies.

The draft of the Public Health (Aircraft) Rules which are based on the International Sanitary Convention for Air Navigation, with modifications to suit conditions in India, has reached a final form and the Rules will be promulgated shortly.

International Commission for Air Navigation.—India was represented at the 26th Session of the International Commission for Air Navigation held at the Haguen dining May and June 1935 by Mr. J. A. Shillidy, C.S.I., I.C.S. (retd.).

Aeronautical Maps.—The preparation of a series of aeronautical maps for India on the scale of 1:1,000,000 has been undertaken by the Survey of India. Hitherto there have been two series of general maps on this scale, namely the "Carte Internationale" series and the "India and Adjacent Countries" series. In order to facilitate the work of keeping the maps up-to-date, it has been decided to concentrate in future on one series only. The "Carte Internationale" has been selected and this will be the basis of the new aeronautical maps. As an essential first step the map sheets are being completely revised and reprinted in turn. As each sheet is completed a special edition will be prepared on which will be superimposed an information concerning so far as possible with the recommendations for the International Local Aeronautical Map Annexé For the International Convention.

The Aeronautical information comprises details of aerodromes and landing grounds, wireless and meteorological facilities, obstructions to air navigation such as high factory chimneys and power lines, air and marine lights, prohibited areas, etc.

Accidents. A total of 24 notable accidents occurred in the calendar year 1935, all of which were flying accidents. The corresponding totals for 1936 and 1937 were respectively: 1936, 30 (all flying accidents); 1937, 18 (15 flying accidents).

Aircraft Manufacture.—The demand for aircraft caused by the war has led to the exploration of possibilities of aircraft manufacturing in India and it is heard that at least two Indian industrial concerns are interested in the project. Discussions have been going on in that behalf between Mr. Walchand Hirachand, a Bombay industrialist and the Government of India and plans for establishing a factory in Bangalore are understood to have reached a very advanced stage. The choice of Bangalore has been prompted by the availability of cheap electricity and high grade steel from the Bhadrachalam Iron and Steel Works. The scheme will be financed mainly through a Joint Stock Company. The Government of India it is understood, have promised to assist the new company to get the required machinery and have also agreed to purchase, in the first instance, 50 planes a year from them.

Air Routes.

A. Trans-Continental Air Routes Across India.—Air services operating from Europe to and across India to the East were as follows:—

(1) Imperial Airways and Indian Trans-Continental Airways Limited.

Until September, 1939, the two companies above-mentioned now operate five services each way per week between India and England. Of these, three services were operated by Imperial Airways Limited with "C" Class Flying Boats between Southampton and Sydney. The other two were operated jointly by Imperial Airways and Indian Trans-Continental Airways Limited between England and Calcutta. The England-Australia air service was suspended in June, 1940, on Italy's entry into the war, but a weekly service was established between South Africa and Australia *via* Egypt. A Government *compagnie* from Simla, issued on July 11, 1940, announced that arrangements had been made for the transmission of mails by air to the United Kingdom and European countries with which communication was still maintained, by the Sydney-Durban service up to Durban and by sea the rest of the way. The first west bound service to carry mails for the United Kingdom and Europe was expected to leave India by the beginning of the third week of July, 1940.

(2) K.L.M. and Air France.

K.L.M. (Dutch) operated a regular service three per week from Amsterdam to Bandoeng, and Air France once weekly from Paris to Hanoi. Both the services operated to a 24 day schedule from Europe to Karachi and their route across India was from Karachi *via* Jodhpur and Allahabad to Calcutta. Both services are now discontinued owing to the war.

B. Indian Air Services.—There are three companies operating scheduled air lines in India. They are:—

(1) *Tata Sons Ltd. (Aviation Department), Bombay.*—Tata Sons Limited commenced operating a weekly air mail service between Karachi and Madras in 1932, connecting at Karachi with Imperial Airways' service. The service was duplicated from January 1935.

With the introduction of the Empire Air Mail Scheme the service was extended to Colombo and increased in frequency to four times per week. The frequency was further increased to five times per week from the end of July 1938, but is now again reduced to four. The route is from Karachi *via* Bhuj, Ahmedabad, Bombay, Hyderabad, Madras and Trichinopoly to Colombo. In 1935, Tata Sons established a weekly service to Trivandrum from Bombay *via* Goa and Cannanore connecting at Bombay with one of the Karachi-Madras Services. This service has since been extended from Trivandrum to Trichinopoly connecting there with one of the Karachi-Colombo services. From November 1937, the Company began a bi-weekly service from Bombay *via* Indore, Bhopal and Gwalior to Delhi. The Bombay-Trivandrum-Trichinopoly and the Bombay-Delhi services are operated only during the fair season (October to April). Passengers, freight and mails are carried on all these services.

(2) *Indian National Airways Limited, New Delhi.*—This company began operations in December 1934 and now run the following services:—Delhi-Lahore-Karachi, every Tuesday; Karachi-Calcutta *via* Lahore and Delhi, Sundays and Mondays; Calcutta-Karachi *via* Delhi and Lahore, Thursdays and Fridays.

They are the principal agents in India for the British Overseas Airways Corporation and Indian Trans-Continental Airways Ltd., and maintain a fleet of large and small aircraft for charters.

(3) *Air Services of India, Limited, Bombay.*—This company was formed during 1936 and opened a regular service from Bombay to the Kathiawar States in November 1937. At present they run the following services:—Bombay-Kathiawar, daily except Sundays; Kathiawar-Cutch on Tuesdays, Thursdays and Saturdays; Bandra-Kathiawar, Tuesdays and Saturdays; Bombay-Poona-Kolhapur, Mondays and Saturdays.

THE SUEZ CANAL.

Opened formally in 1869, the Suez Canal constitutes an artificial waterway about 105 miles long, linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,500 miles respectively, also, of course, substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance.

The Suez Canal is controlled by a company, whose property, valued in the market at £120,000,000, passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 44 per cent. of the shares, thanks to Disraeli's

celebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares are now valued at £84,000,000 and the current profits amount to about £3,500,000 a year. To date, they have earned the British Treasury some £43,000,000 in dividends. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers, a Dutchman and an Egyptian. Only three of the British directors represent the British Government; the remaining seven represent British shipping and commercial interests. Incidentally, nearly 60 per cent. of the total tonnage passing through the Canal is British. The chairman of the Company is the Marquis de Vogüe. The enterprise is managed in Egypt, has its London offices at 6, Bishopsgate and holds its monthly Board meetings in Paris.

Development.

Since the War, the work of widening, deepening and straightening the Canal has been taken in hand with redoubled vigour. Operations are directed from Ismailia. When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. Today, the Canal is on an average, 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 15 ships can pass in the 24 hours. One ship has, however, still to be up to let a second pass, though there is plenty of room for both. It is feared water displacement might bring about a collision. There would also be a danger of grounding. The biggest vessel yet to navigate "The Cut" was of 27,000 tons. It is doubtful if vessels like the *Hoop* and *Rumex*, both over 42,000 tons, could navigate the Canal easily in its present state. Further expansion appears inevitable.

Neutrality.

Absolute neutrality is the law of the Company as was made clear during the Italo-Abyssinian war. Referring to the request that the Canal should be closed to Italian ships, the Marquis de Vogüe, Chairman of the Board of Directors, addressing the annual general meeting of the Company on June 8, 1936, observed: "It (neutrality) is stated in the Act of Concession and in the Statutes. Furthermore, it is guaranteed by an international Convention of 29th October, 1888, expressly confirmed by the Treaty of Versailles. Article I of this Convention says, in the following terms, that, 'the Suez Maritime Canal will always remain free and open, in time of war as in time of peace, to all merchant or war vessels, without flag distinction,' and it adds that, 'the Canal will never be subject to the right of blockade.' 'If, by an act of force, which nothing entitles one to anticipate, any Power thought of forbidding entry into the Canal to ships of another Power, that gesture would be equivalent to an act of war with all its consequences. As for your Board, the question of closing the Canal could not arise and they were never called upon to discuss it.'

The provisions of the Convention are that subject only to the exercise of the right of legitimate self-defence and to action to insure the safety of the canal there can be no restriction provided that the rules are observed, on the free use of the Canal. On two occasions in the past the Canal has been closed and on a third the question of free use was raised. The first was in 1882 six years before the signature of the Convention when during the revolt of Arabi Pasha against the Khedive of Egypt, the safety of the Canal was thought to be imperilled. During the Spanish American war of 1898 the attempt of the Spanish Fleet to call at Suez on its way through the Canal was frustrated by the Canal authorities in accordance with the provisions of

Article IV of the Convention. The third occasion, on which the Canal was closed, was during the Great War when free access and transit was stopped for a short period during which the Egyptian territory and the safety of the Canal were actually endangered by the advance of the Turkish force.

Report for 1933.

The tragic events in Europe since the autumn of 1929, says the latest annual report of the Suez Canal Company, had a direct and important effect on the traffic of the Suez Canal.

During the twelve months which in 1933 preceded the outbreak of war shipping through the Canal showed but a slight reduction compared to the previous year. On the other hand it suffered a serious diminution after the declaration of war. The fall in traffic was sudden and precipitous, being over 50 per cent. in September. There happily followed however a revival which continued in a progressive way till the end of the year. On the whole shipping in 1933 was 14 per cent. less than that of 1932 and the profits of the Company was down by 36 per cent.

The total receipts during 1933 were £490,675,892.84, as shown by comparison with the 1932 figure of £520,642,197.77. Transit receipts were £37,919,257.84, less than those of the preceding year, the reduction being largely due, as already stated, to decreased shipping during the last four months of the year. Receipts from financial service also went down appreciably (£6,547,558.51). The stability of the pound sterling rate in 1933 depressed the Company of the profits through exchange business which it realised in 1932 by effecting transfers of funds between London and Paris under advantageous conditions.

Expenditure on the other hand, rose to £701,804,028.64, an increase of £60,190,790.30, on 1932. The increase was due to the rise in the rate of the Egyptian pound since the preceding report, payment of the share of the Company in the construction of the route connecting Port Said with Suez (according to an agreement of 1930), and to the effects of a rise in gold prices on compulsory charges.

Traffic through the Canal.

During 1933 traffic through the Canal amounted to 5,277 transits, representing 29,574,000 tons net register, a reduction of 4,845,000 tons or 14 per cent. on the tonnage in 1932. This decrease was however not uniformly maintained throughout the year. For the first eight months it was only 2 per cent. less than that of 1932, in September less than half of 1932 and at the end of the year 28 per cent. less than 1932.

British traffic, as indicated in the classification of net tonnages by nationalities, topped the list as usual with a tonnage of 15,208,712 and 2,625 transits. Next came Italy with a tonnage of 4,267,120 and 884 transits, followed by the Netherlands, Germany and France.

The number of passengers had fallen from 479,802 to 410,524. Traffic in goods reached a total of 24,577,000 tons, over 14 per cent. less than that of the preceding year.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravan-serai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Marhatta campaigns; they are but one—the Marhattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picture-que procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the ‘muzzin’ announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharina, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and

observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers, the wily snipe on the ghazals, the strong winged duck, the juking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway *via* Paroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmans and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Ferguson as “the most remarkable and interesting example of a Hindu palace of an early age in India.” Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the **Taj Mahal**. Generations have come and gone since that far day when that most splendid of emperors Shahjahan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanule. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, *Imdad-ud-Daulah's Tomb*, Akbar's Tomb, 5 miles from Agra, and *Fatehpur Sikri*, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace crowns its red bastions with so wondrous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Bindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India, is divined by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard or the largest mosque in India, the *Jama Masjid*, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace at Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Darbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 235 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Ferozabad, Paurana Qila and Shahjahanabad the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor a few places do. Alone at Udaipur is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese Ivories, are linked by dying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony or graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to rich Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 519 feet square. In the midst approached by a marble causeway, rises the Golden Temple, curiously cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babur, the founder

of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the hear in his native haunts and the mountain does on the hill tops.

For those who have arrived at Delhi *via* Bombay an interesting return trip can be made *via* Benares and Calcutta. Many visitors, however, enter India *via* Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoomstation to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the

Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares. Cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting or all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Anranzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama the mythical hero of the Ramayana, the epic poem of the Hindus; but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors went their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find the merchant compounds, built by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Shiva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and lion are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and in the many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wend his way to fair Kashmir or to one of the hill stations of India: Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co., Messrs. Jeena & Co., Bombay, etc., and the Publicity Officers of all the more important Railways as well as the Manager, and the Indian Railways Publicity

Bureau, 57, Haymarket, London, will work out tours to suit the convenience of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable

other places almost as well-known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarapura nearby are well worth a visit.

HOTELS IN INDIA, BURMA, AND CEYLON

ABBOTTABAD.—Springfield, Abbot, Woodlock.
 AGRA.—Cecil, Imperial, Empress, Laurie's.
 AHMEDABAD.—Grand Central.
 AJMER.—Empire, O'Neil.
 ALLAHABAD.—Alliance, Barnett's.
 AMRITSAR.—Cambridge, Imperial.
 AMRANGABAD.—State Hotel, Good Mahal.
 BANGALORE.—The West End, Lavender's, Central.
 BAREILLY.—Royal, Civil & Military.
 BARODA.—Baroda Hotel, The Guest House.
 BELGAUM.—Hotel Green.
 BENARES.—Clarke's, Cecil, Bristol Hotel.
 BIZWADA.—Morris.
 BHOPAL.—Bhopal Hotel.
 BOMBAY.—Grand, Taj Mahal, Apollo, Regent, Majestic, Ritz.
 CALCUTTA.—Grand, Great Eastern, Spence's, Ritz.
 CALCUT.—Sea View, Empress.
 CANNANORE.—Westcliff, Sea Side.
 CANNUPUR.—Berkeley House, Civil & Military.
 CHAKKATA.—Snow View.
 CHANDERNAGORE.—de Paris, Thistle, Carlton Riviera, Prince of Wales.
 COCHIN (Br.).—Harbour.
 COONABUR.—Hill Grove, Hampton, Brooklands, Uplands.
 DALHOUSIE.—Stiff's, Grand View, Arranmool.
 DARJEELING.—Bellevue, Grand Mount Everest, Woodlands.
 DEHRU DUN.—Royal, Gresham.
 DELHI.—Cecil, Maidens, Swiss, Woodlands, Malma.
 DEOLALI.—Coronation, Grand, Rugby.
 DHARAMPUR.—State Oak Bungalow.
 ELLORF.—Empire.
 ERNAKULAM.—Barton Wright's Hotel Terminus, Ltd.
 FERROEPUR.—Club View.
 GHOOH.—Pines.
 GOPALPUR.—Seaside.
 GORAKHPUR.—Macedos.
 GUJMARG.—(Kashmir).—Nedons.
 GWALIOR.—Hotel de Gwalior.
 HYDERABAD (Dr.).—Rock Castle, Percy's.
 ISRORE.—Rest House Milton.
 JAIPUR.—Jaipur, New.
 JHANSI.—Jhansi Hotel.
 JUBBILPORE.—Jackson's, Cecil.
 JULLUNDER.—Jubilee.
 KANPUR.—Charlton Guest House.
 KARACHI.—Bristol, Carlton, North-Western.
 KARWAR.—Grand.
 KHANDALA.—Khandala, Empress.
 KODAKANAL.—Carlton, Golf Link, Lake View.
 KOTAGIRI.—Blue Mountain.
 KULU.—Mayflower.
 KURNOOR.—Clarendon.
 LAHORE.—Falet's, Nedons, Braganza's.
 LOSAVIA.—Hamilton.
 LUCKNOW.—Carlton, Royal.

MADRAS.—Bosotto's, Connemara.
 MAHABLIHWAR.—Central, Hotel de Russe, Ripon, Hotel Granville.
 MAHE.—Riverside.
 MATHURAN.—Rugby, S Lord's Central, Lord Dave Hindu.
 MEERUT.—Royal.
 MOUNT ABU.—Rajputana, The Mount.
 MURREE.—Cecil, Viewforth, Brightlands.
 MYSORE.—Cecil, Charleville, Hackman's, Savoy.
 MUTTRA.—Royal.
 MYSORE.—Metropole, Savoy.
 NAGPUR.—Empire.
 NASIK.—Guest House (Prop. Mrs. McGowan), Miriam Rest House.
 NAINITAL.—Grand, Metropole, Royal.
 NORTAMPTON.—Savoy, Westward Ho, Cecil.
 PACHMARHI.—Hill.
 PANCHGANI.—Prospect.
 PANJIM.—New Central (Campal), Hotel Gloria.
 PATNA.—Grand, Regis.
 PESHAWAR.—Dean's.
 PONDICHERRY.—Rue de Bussey, d'Alsacien, de Europe.
 POONA.—Napier, Wellesley, Grand, Poona.
 PURI.—B N Railway.
 QUETTA.—Laurides.
 RAIPUR.—Carlton.
 RANIKHET.—Norton's.
 RANCHI.—Kilmarnock Lodge.
 RAWALPINDI.—Fishman's, Grand.
 SECUNDERABAD.—Montgomery's, Percy's.
 SHIVPURI.—Shivpuri Hotel.
 SHILLONG.—Pinewood, Ferndale, Stonylands.
 Shimla.
 SIALKOT.—Mount View.
 SIMLA.—Cecil, Clarke's, Corstorphans.
 SRINAGAR (Kashmir).—Nedons.
 TELLECHERRY.—Empire.
 TRIVANDRUM.—Macrot.
 TROMBAY.—Trombay-de-Hotel.
 UDAIPUR.—Udaipur Hotel.
 UJJAIN.—Grand.
 VIZAGAPATAM.—Grand.
 WALSLEY.—Beach Seaside.
 YERACUD.—Tipperary.

Burma.

RANGOON.—Allendale, Minto Mansions, Royal Strand.

Ceylon.

BANDARAWELA.—Bandarawela, Camp View.
 COLOMBO.—Bristol, Galle Face, Grand Oriental.
 GALLE.—New Oriental, Sydney.
 HATTON.—Adam's Peak.
 KANDY.—Queen's, Suisse.
 NUWARA ELIYA.—Carlton, Grand, Grosvedor, Maryul, St. Andrew's.
 MOUNT LAVINIA.—Grand.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

- Afghanistan*—Amin's Bungalow, Walke-shwar Road, Malabar Hill.
Belgium—9, Carmichael Road, Cumballa Hill.
Brazil—Asian Building, Nicol Road, Ballard Estate.
China—Rajjab Malal 127, No. 1, New Marine Lines, Fort Bombay.
Cuba—Petite Fleur, Ranade Road, Dadar, Bombay.
Czechoslovakia—Patel House, Wodehouse Road, Colaba.
Denmark—Vulcan House, Nicol Road, Ballard Estate.
Egypt—Cambata Building, Churchgate Reclamation.
Finland—Alice Building, Hornby Road, Fort.
France—11, Cuffe Parade, Colaba.
Germany—German interests are looked after by the Consul Genl for Switzerland at Bombay.
Greece—21, Ravelin Street, Fort.
Hungary—Volkart Building, Graham Road, Ballard Estate, Bombay.
Iran—Warden Bungalow, opp. P. O., Colaba.
Iraq—"Panorama" 203 Walke-shwar Road, Malabar Hill.
Italy—"Vallabh Bhuvan," Warden Road, Cumballa Hill.
Japan—United India Life Bldg., Sir Phiroz-shah Mehta Road, Fort, Bombay.
Latvia—6, Ontham Road, Fort, Bombay.
Luxembourg—No. 9, Carmichael Road, Cumballa Hill. Temporary—Belvedere Court, Queens Road, Churchgate Reclamation.
Monaco—Mohamed Building, 39 Pydhon Road, Khadak, Bombay, 9.
Netherlands—J. N. Institute Bldg. 314 Hornby Road.
Nicaragua—Alice Building, Hornby Road, Fort.
Norway—Imperial Chambers, Wilson Road, Ballard Estate.
Poland—Karwa Castle, Walke-shwar Road.
Portugal—17, Cuffe Parade, Colaba.
Romania—Sandhurst House, Sandhurst Bridge, New Queen's Road.
Spain—Ritz Hotel, Churchgate Reclamation (Provisional address).
Sweden—Vulcan House, Nicol Road, Ballard Estate.
Switzerland—Maneckjee Wadia Building, 125 Esplanade Road.
Thailand (Siam)—C/o Wallace & Company, Wallace Street, Fort.
Turkey—Afghan Consul looks after Turkish interests.
United States of America—Bombay Mutual Life Building, Hornby Road.

States having Consulates in Calcutta but not in Bombay.

- Argentine Republic*—5, Fairlie Place (C/o House Miller & Co.)
Bolivia—7, Old Comit House Street.
Columbia—13A, Sudder Street.
Dominican Republic—104, Savabazar Street.
Ecuador—6, Lyons Range (C/o Messrs. Lutna Morrison & Co.)
Estonia—Mousell & Co. Mercantile Bldgs. Lal Bazar.
Haiti—36, Galstann Mansions.
Hongkong—4, Fairlie Place, (C/o Gladstone Wylie & Co.)
Paraguay—9, Esplanade Mansions.
Peru—36, Galstann Mansions.
Thailand—8, Galland's House, Chive Street.
Turkey—C/o Mousell & Co. Mercantile Buildings, Lal Bazar.
Venezuela—13A, Sudder Street.

N.B.—There are at present no Consuls for Costa Rica, Liberia, Salvador and Mexico at Calcutta. The Consulates for Guatemala and Chile have been abolished.

Foreign Consular Officers in India.

Corrected up to 20th January 1940

Name.	Appointment.	Station.
Afghanistan.		
Monsieur Muhammad Shafi Khan	Consul-General	Delhi
Monsieur Abdul Wahab Khan	Consul	Bombay.
Monsieur Muhammad Shmail Khan	Do	Karachi
Argentine Republic.		
*J. B. Turnbull (on leave)	Vice-Consul	Calcutta.
J A E Evans (Acting)	Do	Do.
Belgium.		
Monsieur R. Gerard (on leave)	Consul-General	Bombay.
Monsieur Rene Van Ros (Acting)	Do.	Do.
Monsieur M. Goosse	Do.	Calcutta.
*J. J. Flockhart	Consul	Karachi.
*D. M. Reid, O.B.E., M.C.	Do.	Madras.
Monsieur R. Beruck	Vice-Consul	Calcutta.
Bolivia.		
*B. Matthews (on leave)	Consul-General	Calcutta.
A J Thompson, B.S.O. (Acting)	Do	Do
Brazil.		
Vacant	Consul	Bombay.
Monsieur Jaime N. Heredia (in charge of the Consulate)	Vice-Consul	Do.
Senhor Ignacio Soares de Bulhoes	Consul	Calcutta
Monsieur F. de M. Braganca (Acting)	Do	Do.
*Monsieur H. V. Simons	Vice-Consul	Do
China.		
Chao Chin Hung	Consul-General	Calcutta.
Shi Shon-Hing	Consul	Do
Yo-Shih Chen	Vice-Consul	Bombay.
Colombia.		
*H. Aldridge	Consul	Calcutta.
Cuba.		
Monsieur F. Bonachea (on leave)	Consul-General	Calcutta
*Monsieur F. de M. Braganca (Acting)	Do	Do.
*Monsieur W F Pais	Consul	Bombay.
Czechoslovakia.		
Monsieur Ladislav Urban	Consul	Bombay
*G. S. Mahomed	Consular Agent	Do.
Vacant	Consul	Calcutta.
*J. J. Wahmsley	Do	Karachi.
Denmark.		
*Monsieur B. A. Thorstenson	Consul	Bombay
*A. N. Wardley	Do.	Calcutta.
*A. Hansen	Do.	Calcut
*K. Moller	Do	Madras.
*G. C. H. Kent	Vice-Consul	Calcutta
*E. J. McNulty	Do.	Karachi.

*Honorary.

Name	Appointment.	Station.
Dominican Republic.		
*Dr. R. N. Roy	Consul	Calcutta.
Vacant	Vice-Consul	Do.
Ecuador.		
*L. W. Balcombe	Consul	Calcutta
Egypt.		
Monsieur Mohammat Sadek Abu Khadra ..	Consul-General .. .	Bombay.
Ahmad Choukry (Acting) .. .	Do .. .	Do
Estonia.		
*A. Sommerfeld	Consul	Calcutta
Finland.		
*C. H. A. B. Hardcastle	Consul	Bombay.
*A. Booker	Do	Calcutta.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), the Bellevue, and the Woodlands.

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhauladhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmasala and Kangra. The best hotels at Dalhousie are Stiff's Grand View and the Arraunmoor; and at Dharmasala the Switzers.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi or Jammu (Tawi)—about 48 hours—whence the remainder of the journey to Srinagar, Capital City of Kashmir, about 200 miles by either route, is accomplished by motor. Maximum temperature of the place is 80° Fahr. and the average height of the Valley is about 6,000 ft., and it is entirely surrounded by the snow-covered lofty, outer-ranges of the Karakoram and the Himalayas. Visitors usually stay at Srinagar. Gulmarg and Pahalgam in boarding-houses, in bungalows rented through agencies or one can hire a houseboat, which can always be available, and live on river Jhelum, Nagm-bagh lake, Nasimbagh, Gauribal, Chinabagh, Shadipora, Simbal or Ganderbal. At Gulmarg Nedom's is the only Hotel but boarding-houses are also available besides a sufficiently large number of well furnished wooden huts. People also live in tents as at Pahalgam or when on trekking.

Kodaikanal. (7,000 ft.)—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by motor-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton, the Golf Link and Lake View are the principal hotels. There are also boarding-houses.

Matheran. (2,500 ft.)—The nearest hill station to Bombay, ideal for walkers and anybody wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. The

best hotels are the S. Lord's Central, Lord Dave Hindu and the Rugby.

Mahabaleshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahabaleshwar. Mahabaleshwar is noted for its delightful vegetation: orchids and blues bloom in April and May. **Hotels.**—Central Hotel de Russe, Ripon and Hotel Granville.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer. P.W.D., Mount Abu. There are excellent golf links and arrangements have been completed to electrify the station.

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil, the Viewforth, and the Highlands.

Mussoorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's, and the Savoy.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Katigodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre gauge railway. The Manor House, Mettupol and Royal are the best hotels.

Ootacamund ... known as Ooty is situated in the Nilgiri Hills at an average of 7,000 ft. The mean average of the temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Government of Madras for six months of the year from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours or by taking train to Mettupalayam via Madras and thence by hill railway of Ootacamund. The principal hotels are the Savoy, Westward Ho and Cecil.

Pachmarhi. (3,500 ft.)—Situated on a plateau in the Mahadeo Hills of Satpura Range is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G.I.P. railway to Pipariya for Jabalpur, and a two-hour motor journey. The best hotel is the Pachmarhi Hotel.

Simla.—The summer headquarters of the Government of India (Central Government) and the Government of the Punjab, which move up from New Delhi and Lahore respectively, is situated on several small spurs of the lower Himalayas at a mean elevation of 7,100 feet above sea-level.

From the beginning of October to about the middle of December Simla enjoys the best climate in the world and throughout the year it is very equable there being a variation of about 10 degrees between night and day temperatures. The mean rainfall approximately 64 inches. Mean maximum temperature 60 degrees, mean minimum 50 degrees. Kalka which is 2,100 feet above sea-level, is the terminus for the broad-gauge railway system and from thence onwards the metre-gauge takes its place, manœuvring to Simla through over 100 tunnels. For those who prefer a more luxurious mode of travel rail motors are run by the railway and en route the scenery is superb. At Kalka motor cars are available for those who would prefer to travel by road and the journey is completed within 2½ hours.

There are several excellent hotels in Simla, the Cecil, Constanthens, Clarkes and for orthodox Indians, Glenariff, Hindu, Muslim and Royal. In Mashobra, 7 miles out of Simla, there are the Gables and Wild Flower Hotels. Boarding houses are in the minority, the best known are Tallot House and Waverley. The Y.W.C.A. and the Y.M.C.A. are open for the greater portion of the year.

There is a very good road into the interior and Hikers to Narkunda, Kotdhar and Rampur Bushahr are lodged in rest-houses that line the road. The scenery in these parts is magnificent

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only two, Kamet (25,447 ft.) and Nanda Devi (25,660 ft.) have been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Ganin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and

made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Lord Conway who, in 1892, made explorations in the Karakoram Himalayas particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakoram and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first-class portage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakoram and W. W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas, who got within a few feet of that top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kanchenjau, Pauhunri and Chomomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Shugby also attempted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 24,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.), the first peak over 25,000 ft. to be climbed.

Mount Everest.—There have been six Expeditions to Mount Everest of which those in 1921 and 1935 were reconnaissancees and those in 1922, 1924, 1933, 1936 and 1938 attempts to reach the summit.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,100 feet. Their final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 26,800 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An **Everest Committee** was formed under the aegis of the Royal Geographical Society and the Alpine Club, and Mr. Hugh Rutledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in its members were Mr. F. S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene who climbed with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col. slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III. 21,000 ft. Camp III was linked to the North Col. by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high wind Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters succeeded in reaching 21,000 feet. If he then went on alone and nothing more was heard of him, until his body was discovered near the site of Camp III. 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions; examination of alternative routes from the west, the trying out of new men for the summit attempt; physiological observations; a stereo-photogrammetric survey; examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

THE 1936 EXPEDITION was led by Mr. Hugh Rutledge and included three of the 1935 climbers—Messrs Shipton, Smythe and Wyn Harris, and one of the 1933 Signals Officers Lieut. Smith Windham. It encountered exceptionally bad weather and unusual conditions. Before the monsoon, snow-storms rendered the mountain unclimbable and the usual pre-monsoon north-west wind was lacking to clear the snow away. However, Camp IV on the North Col. was established to schedule and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap their discomfort the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to re-open the route to the North Col. but on both occasions the party were in great danger and the attempt had to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west-side of the North Col. which, in spite of Mallory's unfavourable verdict, was found to be not only practicable but less dangerous in monsoon conditions than the east side.

The 1938 expedition consisted of seven climbers, H. W. Tilman, E. E. Shipton, F. S. Smythe, N. E. Odell, Dr. C. B. M. Warren, P. Lloyd and Capt. P. R. Oliver and was led by Mr. Tilman. It was considerably smaller than previous expeditions owing to economic reasons and because experience has shown that the small light expedition has as good and perhaps better chance of achieving its object than a huge cumbersome expedition rendered comparatively immobile by its transport and tied down to a fixed plan. Though the expedition failed to reach the summit of Mount Everest it fully justified these beliefs and cost only £2,500 as against the £10,000 or more of previous Everest expeditions.

The expedition reached Rongbuk on April 6th and established Camp 3 on April 26th. Wind and cold made further advance impossible and the party descended to the Kharta valley

for a rest and to recuperate from influenza chills and sore throats. They returned in the middle of May during the commencement of the monsoon which broke on the unprecedented date of May 5th, one month to six weeks earlier than usual. The route up the North Col was forced in dangerous snow conditions and the party had a narrow escape from an avalanche. Camp 4 was established on May 24th but snowstorms drove the party down. It was then decided to regain the North Col from the west *via* the Main Rongbuk Glacier and Camp 4 was re-established after a difficult ice climb on June 5th. On June 8th Camp 6 was established by Shipton and Smythe with seven porters and the following day an attempt was made to reach the summit. Conditions, however, proved impossible owing to deep monsoon snow, and the party was forced to retreat after reaching a height of 27,300 ft. A further attempt by Tilman and Lloyd on June 11th met with no more success and the expedition had to be abandoned.

Aerial Expedition.—An interesting side to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work. Lord Clydesdale chief pilot, E. L. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April permitted.

An interesting mountainflight of which details were published in 1933 was one from Raisalpur to Gilgit and back, undertaken by the R. A. F. at Raisalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Raisalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken. Such flights are now frequently made by the R. A. F.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat**. It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the

summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a route during which no fewer than nine lives were lost. Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten. One or two spent a week without food or shelter.

In May 1937, another attempt was made to climb **Nanga Parbat** by a German expedition, headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of one survivor, Dr. Luft, had perished. Eight of the nine members of the expedition were killed along with nine Sherpa porters. Mountaineering experts are of the opinion that the season was not very propitious for the ascent of the peak, which is considered to be more accessible in the autumn.

A further German attempt to climb Nanga Parbat was made in 1938 under the leadership of Dr. Paul Bauer. During the second half of July the party succeeding in reaching a height of over 23,000 ft. but were forced to retreat by bad weather. During the climb the bodies of Herr Willy Merkl and the porter Gay Lay, who perished in 1934 were discovered.

In 1939 another German expedition led by Herr Peter Aufsmatter explored the Diamirai flank of Nanga Parbat.

Another expedition to the Karakoram took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party, state it to be more than 1,000 feet higher.

In 1934 Messrs. L. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of **Nanda Devi**, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri *via* the Satopanth Pass and explored the head of the Gangotri glacier. Profiting by the discovery of the route to the Nanda Devi basin an Anglo-American party, the leader of which

was Mr. H. W. Tilman, successfully scaled Nanda Devi via its south-west ridge, Messrs. H. W. Tilman and N. E. Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camp up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

In 1939 the first **Polish expedition** to visit the Himalayas succeeded in making the ascent of the East Peak of Nanda Devi. Unfortunately an accident led to the death of M. M. A. Karpinski and S. Bernadzikiewicz on Trisul above the Milam Glacier.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panyarni, near Pahigam in Kashmir.

In 1935 an attempt to scale Peak 36,254,00 feet, in the western Karakoram was made by Lieut. J. Waller, Lieut. J. Hunt, Dr. J. S. Carslaw and W. R. Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru was reached by Mr. C. R. Cooke who was accompanied to the foot of the final rocks by Mr. G. Schobert who was forced to give up owing to a high altitude cough and the risk of frostbite. This ascent was made on November 15th, an unusually late date and is of great interest as proving that high Himalayan peaks can be climbed in early winter at least.

The 1936 French expedition to the Karakoram, like the Everest expedition, encountered very bad weather and accomplished little.

After Nanda Devi the most remarkable ascent of 1936 was that of **SINOLCHU**, a peak once designated as the "embodiment of impenetrability", in the Kanchenjunga range. This was made by a small German party under the leadership of Herr Paul Bauer. Sinolchu is one of the most beautiful peaks in the Himalayas.

In 1939, a party of Munich mountaineers, consisting of Herren Grob, Paudar and Schneider, made the first ascent of the Tent Peak in the Kanchenjunga range and attempted the Twins Peak but were defeated by bad weather.

Other ascents in Sikkim were made by Mr. Marco Pallis's party who attempted Sinu unsuccessfully and by Mr. C. R. Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Fluted Peak.

During the summer of 1937 a number of peaks were climbed the most notable being Chomolhari 23,997 ft. by Mr. F. Spencer Chapman with one porter, and the Mana Peak 23,860 ft. by Captain P. R. Oliver and Mr. F. S. Smythe. Mr. Smythe completing the ascent alone as Capt. Oliver was insufficiently acclimatised. Three other peaks of 21,400 ft. 21,500 ft. and 22,481 ft. were also climbed by Messrs. Oliver and Smythe and attempts made on Nankanta and Dunagiri which were frustrated by bad weather. They also explored a remarkable plateau above the Banke Glacier discovered in May 1937 by Lieut. R. A. Gardner

of the Survey of India. In addition, Mr. Smythe with three Tibetan porters climbed seven peaks of the Zaskar Range among them the very difficult peak of Nilgiri Parbat, 21,264 ft. During this expedition Mr. Smythe came upon some remarkable tracks in the snow which the Tibetan porters believed were made by a Mirka or Abominable Snow Man. These tracks were afterwards identified as bear tracks by the Natural History authorities in London. It is believed that there is now enough evidence to explain this strange legend of the Himalayas.

Garhwal was visited in 1939 by a Swiss expedition led by M. Andre Roch and two hne peaks were scaled, Dunagiri and the Wedge Peak.

In 1938 Mr. C. S. Houston led an expedition to the Karakoram during the course of which a bold and determined attempt was made to climb K2, 28,150 ft. After failure to obtain a footing on the N.W. ridge the party, which included several veteran Sherpa porters, ascended the N.E. ridge to a height of 26,000 ft.

A further attempt on K2 was made by an American party in 1939 but ended in disaster, Mr. Dudley Wolfe, and three Sherpa porters losing their lives in stormy weather high up the mountain.

Another expedition to the Karakoram was that undertaken by Capt. J. B. Harrison, Lieut. J. O. M. Roberts, Mr. R. A. Hodgkin, Dr. T. Graham Brown and Lieut. J. Waller together with Dr. G. A. J. Teasdale and Dr. Elizabeth Teasdale. The principal objective was Masherbrum 25,660 ft. After establishing Camp 7 at 24,000 ft. Harrison and Hodgkin reached a height of about 25,000 ft. before being forced to retreat by bad weather. In descending to Camp 6 they were overtaken by a blizzard and forced to spend a night in the open as the result of which they were seriously frostbitten. The devotion of the Sherpa porters prevented a more serious disaster.

Further exploration of the Badrinath Kedarnath ranges at the sources of the Ganges as well as various ascents was made by a German expedition under the leadership of Dr. R. Schwarzenher in the autumn of 1938.

The Survey of India are now very active and much work has been accomplished during the re-survey of Garhwal and Kumaon under the direction of Major Gordon Osmaston, whilst several thousand square miles of country have been mapped by Messrs. Shipton and Tilman during their expeditions to the Shaksam in 1937 by Mr. Shipton during his expedition to the Kara Koram in 1939.

The Himalayan Club.—Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting the study of the Himalayas through exploration and discovery. The institution of this Club was due to the late Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-General. Its membership is over 350, including three lady members and its president is Sir Harry Hagg, Governor of the United Provinces. Mr. J. S. H. Shattock is Hon. Secretary.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible Capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi, a Committee consisting of Surgn-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs

and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "hattle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors afterwards increased the amount, the chief of these being the immense rise in prices after the war, and the Legislative Assembly

were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs. 1,291 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project, after being completed and closed, was re-opened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature. The population of the new City is now about 80,000. Practically all the building sites within it (except in a small area where shortcomings in drainage are a handicap) are taken up and the time for extending the layout has almost arrived.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters have their offices in the new Secretariats, or which the builders have already had to carry out the first section of the extension provided for in the architects' plans. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months

and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhitill mid-April and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. An early descent from Simla was postponed in the autumn of 1934 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October. But various factors including especially the increase in personnel in the Secretariat and consequential congestion of office and residential accommodation in Simla are making the extension of the Delhi season unavoidable. The prospective enlargement of the Indian Legislature, with the arrival of Federation, strengthens the same tendency. The provision of considerable further housing accommodation both for offices and residential has become imperative. The only question is whether this should be undertaken both in Delhi and in Simla or in Delhi only. Pressed by sharp financial stringency, arising partly out of the emergency created by the institution of the Constitutional Reform, the Government of India appear decisively moving in the direction of making Delhi an all-the-year round Capital. Certain Departments are already now kept in Delhi throughout the year. Others are under orders to remain. The office personnel of others are for the first time being kept in Delhi throughout the year in 1934. The Government of India in January, 1934, announced that further retentions in Delhi throughout the year are under their consideration.

There was in recent years an increase in malaria bearing mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1926. The inquiry showed that both Old and New Delhi were ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which, when the new city was built, was placed immediately outside its southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti-malaria operations on a large scale, scientifically directed, were simultaneously undertaken, the estimate of their cost being Rs. 14 lakhs. Improvements in the water supply of the new Capital with a view to a larger population being retained in it during the summer has also been effected.

When the residential buildings in New Delhi were, in the course of the original construction of the new city, about to be designed, the Government of India issued orders that they were to be "for cold weather occupation only." This rule was followed. The general principle embodied in the design of the houses was that of planning them to capture as much warmth from the sun as possible, Secretariate, residen-

tial bungalows and staff quarters are largely inappropriate for hot weather occupation. How Government will deal with this problem remains to be seen.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Lathi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but gave no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work was continually progressing until the world-wide depression in recent years dried up funds.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position, the centre of the circular Princes' Park. The construction of the building was for some time delayed, but it is now proceeding with some speed. The building was formally inaugurated by Lord Curzon in February, 1931, in the presence of representatives of every unit of the army in India, of the Royal Air Force and of a large concourse of official and other spectators.

George V Memorial.—It was decided in 1936 to erect a memorial statue to His Late Majesty, King Emperor George V, in Princes' place, the large park-like area lying between the All-India War Memorial and the Purana Qila. The origin of this proposal was a movement started among the Ruling Princes, sometime previously, to erect a white memorial statue to His Majesty in the new city and this scheme had made considerable progress when His Majesty died. The matter was then considered in a broader light and in consultation between Their Highnesses and His Excellency the Earl of Willingdon. The Princes agreed to merge their scheme in a larger one for an All-

India memorial to His Late Majesty. H. E. the Viceroy issued an appeal for subscriptions to the major scheme and he and Her Excellency the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutjens was invited to submit a design for a memorial and His Excellency the Viceroy and the representatives of the Ruling Princes inspected Princes' place with a view to a statue being erected there and in particular had a temporary wooden structure erected so that they might judge how a statue of the same dimensions would appear from different viewpoints. The statue of His Late Majesty is to be in bronze and will show His Majesty seated under a lofty canopy.

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration." To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential University of Delhi, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation stone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by the Government. For the time being the University was housed in the temporary buildings at Lathi. Delhi occupied by the Civil Government in 1929 and in 1931 the old buildings were allocated to it for its future home.

H. H. the Maharaja of Bhavnagar having offered Rs. 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Qila, i.e., between them and Princes' place. This area was originally marked by Sir Edward Lutjens, in his plan, to be an ornamental lake. Practical consideration led to its abandonment for that purpose and the area was laid out as a park. A large proportion of the Maharaja's Rs. 5,00,000 was utilized for the provision of a huge brick grandstand overlooking the central portion of the park taken for the Stadium.

Inaugural Ceremony.—The new city was the scene of notable and elaborate

inauguration ceremonies in February, 1931. The first of these was the unveiling of four "Dominion Columns" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchanant of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

City Extension—The main direction for the future extension of the new city is southward, where for some three miles beyond the limits of present development, Government have land in their possession and have placed it at the disposal of the City administration. The New

Delhi Civil Aerodrome lies immediately southward of the existing new City boundary on the southern side and H. E. the Earl of Willington in February 1936, opened alongside the high road there a fine new Willington Air Station, which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood. The scene of the next town-planning seems likely to be in the area lying between the new city and New Delhi Cantonment.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

A development Trust was instituted in 1937, its duties being to provide for the expansion of the new capital, including both old and new cities and ingeniously to deal with the insatiable overcrowding of the old city a problem arising from the rapid increase of population there since Delhi again became capital of India.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq. authorising him to "open a new Lodge in Bengal." Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zeel. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that Lodge on Nov. 17, 1760, and we learn on the same date that the "Lodges of the Province" were held in Calcutta. Mackett was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrers in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed

October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In 1767 Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1781 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Frichimopolis of the eldest son of the Nawab of Arcot, Undat-ul-Umara, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Degree." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 80.

Here "Orion" unrecognized at home, aided in the secession of some of its members who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quartermasters had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836 in ecclesiastical phrase as a

Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels furniture, and belongings and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished and English Masonry declined until the year 1848 when a Lodge St. George No. 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umदात-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

- 76 Lodges. Rt. Wor. Bro. A. Barr Pollork, P.G.D., District Grand Master. Dy. P.G.M. F. W. Hockenhill, M.L.A. P.G.D. Asst. D.G.Ms., K.C. De. C.I.E., I.C.S. (Rtd.), P.A.G.D.C. and Hon. Mr Justice F. G. Rowland, I.C.S.

Grand Steward	J. K. A. Choudhury,

The Grand Lodge of Scotland exercises its rule through a Grand Master of All Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. The Hon'ble Mr. Justice Cecil Patrick Blackwell Kt., M.B.E. the present incumbent of the office, and controls 71 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

Major A. G. Campbell, G. Supdt. Northern India.

N. Todale, G. Supdt., Central India.

Brigadier E. C. M. Paris, G. Supdt. Southern India.

A. C. Muirden, G. Supdt., Eastern India.

I. H. Taunton, I.C.S. G. Supdt., Sind.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J.P., 17, Murzban Road, Fort Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837 but it was short lived. An attempt was made in 1860 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province there being two already, viz., English and Scottish the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India who is Rt. Wor. Bro. Mr. Justice Munroe of the Lahore High Court. He has two Asst. Grand Inspectors, one for the Bombay Presidency, who is Wor. Bro. A. Finan, and one for Bengal who is Wor. Bro. E. O. Rees.

Eleven Lodges are working in India at the following places

Bombay

Nos 319, 419, 648.

Calcutta.

Nos 263, 382, 464, 465 490 and 567.

Lahore.

No 19.

Sindia

No 458.

Royal Arch Masonry—Under England the District Grand Master in any District is nearly always created also Grand Superintendent who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The English five Districts are constituted as under—

Bengal.

30 Chapters Grand Supdt. Most Ex. Comp. A. Bari-Pallock

Madras.

20 Chapters Grand Supdt. Most Excellent Comp. G. T. Boaz, C.S.I., C.I.E., I.C.S.

Bombay

27 Chapters M Comp. Ex. W. A. C. Bromhani, Grand Superintendent

Punjab

22 Chapters Most Ex. Comp. Rt. Rev. Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., Grand Superintendent.

Burma.

7 Chapters Most Ex. Comp. W. H. Chance, V.D., Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. Sir Shapootjee B. Billimoria, Kt., W.B.F., J.P., under whom there are 32 Chapters in India. The Grand Secretary of All Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal

23 Lodges, Rt. W. Bro. A. Barr-Pollock District Grand Master.

Bombay.

18 Lodges, Rt. W. Bro. W. A. C. Bromham, P.G.D., District Grand Master.

Madras.

16 Lodges, Rt. Wor. Bro. George Townsend Boag, C.S.I., C.I.E., I.C.S., District Grand Master.

Punjab.

12 Lodges, Rt. W. Bro. Rt. Rev. The Lord Bishop of Lahore, C.I.E., O.B.E., V.D. M.A., D.D., District Grand Master.

Burma.

5 Lodges, Rt. W. Bro. W. H. Chance, V.D., District Grand Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark degree is worked in some S.C. Lodges, but essentially in R. A. Chapters, in which the Excellent, R.A.M. and other degrees can be obtained. S.C. Chapters insist upon candidates being Mark Master Masons before exaltation. The Mark degree in Scottish Craft Lodges is conferred by the Rt. Wor. Master as the S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Royal Ark Mariner.—The Royal Ark Mariner degree is worked in the English Constitution by lodge attached to Mark lodges. Its ruler is the District Grand Mark Master and only Mark Master Masons can take this degree.

There are 10 R. A. M. Lodges under Bengal, 5 under Bombay, 4 under Madras and 4 under Punjab.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18th is worked in India under England, but under Scotland the 30th is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of K.H.S. and Kt. of St. John. They are governed by the Grand Council in England direct.

The Conclaves working in India are:—

No. 43 Bombay and No. 160, Simla.

The Order of the Secret Monitor has 7 conclaves under Bombay and 7 under Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

Guy D. Robinson, P. D. G. W. (Bombay). 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W., Freemasons' Hall, Ravelin Street, Fort. Bombay.

D. G. S., Burma, E. C.

E. Meyer, P. G. Deacon, (Eng.), Rangoon.

D. G. S., Madras.

Rao Bahadur S. T. Srinivasa Gopala Chari, P. G. D. Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, P.A.G.D. of C., (Eng.). Freemasons' Hall, Lahore.

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangeer C. Mistree, J.P., 17, Murzban Road, Fort, Bombay.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 126 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

The Survey is unique in that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India."

Botanical Survey.—The Botanical Survey department of the Government of India was under the control of a Director. The Superintendent of the Royal Botanic Garden, Calcutta was *ex-officio* Director. The Director having retired since December 3, 1939, the Department is awaiting some reorganisation. The duties of the Director are distributed amongst (i) Dr K. P. Bhwas, M.A., D.Sc. (Edin), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta; (ii) Mr S. C. Sen, B.Sc. (Cal), B.A. (Cuttab), A.M.T. Chem. E., Offg. Superintendent, Cinchona Cultivation in Bengal and Principal Quinine Officer of the Government of India; and (iii) Mr. M. N. B. M.Sc., Ph.D., Curator, Industrial Section, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a Curator who is engaged in the development and maintenance of the Industrial Section. The Director held administrative charge of the Government of India's cinchona distribution in India and of quinine manufacture in Bengal.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, limnology, distribution of plants, ecology and economic botany of plantlife—the work accomplished in pure and applied botany at the Royal Botanic Garden during the

last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open prove to be most useful in dealing with such questions of considerable State-importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaption of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India :

Precise levelling for the determination of heights ;

Tidal predictions and publication of Tide Tables for thirty-one ports between Suez and Singapore.

The Magnetic survey ;

Observation of the direction and force of gravity ;

Astronomical observations to determine latitude, longitude and time ;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905, however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at that time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing, however, to the Great War and more recent retrenchments, only about three-fourths of the programme had been completed by 1939, in spite of the reduction of scale for the less important areas.

Although new surveys are carried out every year, covering from thirty to sixty thousand square miles—an area roughly that of England—the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures—such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but are entered from data gathered from outside sources.

Out of a total of 1,623,015 square miles, which is the Survey programme of India 1,191,863 square miles have now been surveyed, and it is hoped that the remaining area will be done in about 12 years' time.

While some of these unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in Central Burma, Eastern Bengal, North Bihar, South Bombay, Gujarat, Sind and Western Rajputana have yet to be mapped on modern lines.

The work is now being done by 8 parties distributed all over India, including the Himalayas, where one party operates from April to June till the rains start and again from September till such time as work is rendered impossible by cold. For the other parties the winter is their field season, the rains being devoted to drawing.

On the separation of Burma from India on 1st April 1937, the Burma Survey Party, Survey of India, has been placed on foreign service conditions under the Government of Burma. Technical and administrative control is, however, still exercised by the Surveyor General of India. The activities of the Survey of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys ;

Riverain, irrigation, railway and city surveys ;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun are always at the disposal of other Government departments, and the public, for such work as the printing of special maps, illustration for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining up-to-date instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be replaced from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible assistance, and continuous research is being carried on in the latest methods of mapping from photographs taken from the ground and in the air.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is in the hands of the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Director, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Shillong; Officer in charge, No. 6 (South India) Party, Bangalore; and Officer-in-Charge Burma Survey party, Survey of India, Maymyo.

Indian Science Congress.—The Indian science Congress was founded in 1914 largely through the efforts of Prof. P. S. Macmahon and Dr J. L. Simonson. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The general administrative work of the Office of the Congress was under the management of the Royal Asiatic Society of Bengal till 1939. The Association at present has a permanent staff of its own and an office to administer its own affairs. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually.

The Congress meets in January each year in one of the principal cities. The proceedings last for six days. The Head of the Local Government usually becomes Patron of the Congress and the session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually,

the different sections being usually represented in turn. The sections are (1) Mathematics and Statistics, (2) Physics, (3) Chemistry, (4) Geology, (5) Geography and Geodesy, (6) Botany, (7) Zoology, (8) Entomology, (9) Anthropology, (10) Medical and Veterinary Research, (11) Agriculture, (12) Physiology, (13) Psychology and Educational Science, (14) Engineering; when the Sections meet separately, each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers. Special discussions and symposia are held in the mornings or in the afternoons during the Session. Social functions and visits to places of scientific and industrial interest are arranged in the afternoons by the Local Reception Committee which is formed at the venue of the Congress to arrange for the work of the Session. Popular Lectures by eminent scientists and specialists are delivered in the evening for the general public and form an important and attractive feature of the programme.

General Secretaries.—Prof S. K. Mitra, M.B.E., D.Sc., F.N.I., University College of Science, 92, Upper Circular Road, Calcutta; P. Parija, M.A., F.N.I., I.E.S., Principal, Ravenshaw College, Cuttack

The Indian Research Fund Association.—This Association was constituted in 1911 with a sum of Rs. 5,00,000 set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association can claim to be amongst the pioneers in organised medical research on a large scale and its work has been widely appreciated in other countries.

The control and management of the Association are vested in a Governing Body, the President of which is the Member-in-charge of the Department of Education, Health and Lands of the Government of India. This body is assisted by a Scientific Advisory Board of which not less than three members have seats on the Governing Body. The Director-General, Indian Medical Service, is the Chairman of the Board and the Public Health Commissioner with the Government of India is the Honorary Secretary of the Board and of the Governing Body. Membership of the Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent life member, while every subscriber of Rs. 100 per annum can be a temporary member.

The original Governing Body of the Association was, until 1929, composed exclusively of officials, but in that year the Raja of Parlakimedi, made a donation of Rs. 1,00,000 to the Association and was appointed a life member. In the same year the Government of India, after taking into consideration the question of liberalising the constitution of the Governing Body, decided to enlarge that Body by including three representatives of the Indian Legislature, two representatives of Medical Faculties of Universities incorporated by law in India and one eminent non-medical scientist to be nominated by the Governor-General. As a result of further representations from the Universities and the

Legislature, this Body was again enlarged in 1933 by the addition of a third representative of the Medical Faculties of Indian Universities, whilst it was decided that the non-medical scientist should in future be elected by the Indian Science Congress Association. A Recruitment and Appointments Board has been formed from amongst the members of the Governing Body of the Association to select and recommend officers for Medical Research Department Institute of Hygiene and Public Health, Calcutta.

In order to ensure the closest co-operation between workers and to prevent overlapping of efforts, an annual conference of medical research workers and administrative heads of Medical and Public Health Departments used to be convened under the auspices of the Association upto 1938. In that year it was decided that the Conference should be held biennially in future. No Conference will, however, be held in 1940 on account of the war. At this conference free discussions are held on the work accomplished and on proposals for future work. The results of the discussions are available to guide the members of the Scientific Advisory Board in making their recommendations for the programme for the following year. The Conference is assisted by Advisory Committees consisting of Research workers on cholera, malaria, maternal mortality, nutrition, plague, leprosy and tuberculosis, who examine the proposals for research work and make recommendations to the Scientific Advisory Board.

The results of researches carried out under the auspices of the Association are published in the "Indian Journal of Medical Research" and its "Memoirs" and the "Journal of the Malaria Institute of India," all of which are issued under the authority of the Association and have now a firmly established position in the scientific world. These publications are obtainable from Messrs. Thacker Spink & Co., 3, Esplanade East, Calcutta, on payment.

Since its inception a great number of enquiries have been carried out and from small beginnings great expansion of its activities has taken place. Enquiries which have been or are under investigation include investigations on cholera, bacteriophage, malaria, nutrition, leprosy, plague, vaccines, tuberculosis, pharmacology, indigenous drugs, maternal mortality, helminthology, medical mycology, dracontiasis and filariasis, protozoal parasites, cancer, epidemic dropsy, kala-azar, blood culture, sandfly fever, typhus, snake venoms, fluorosis

Besides financing investigation which are conducted by workers in its direct employment, the Association gives grants-in-aid to institutions and also to out-side workers. The total expenditure for the last few years has amounted to between seven and eight lakhs of rupees per annum. The Association has been supporting the Malaria Institute of India, which now enjoys international recognition. As part of the activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January, 1927 and named the "Ross Field Experimental Station

for Malaria." This was transferred to Delhi on 1st March, 1939. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria problem.

The Association maintains the Nutrition Laboratories, Coomoor. The Coomoor laboratories carry out investigations which have a direct bearing on the problem of nutrition in India. The diet surveys undertaken by the laboratories have provided very valuable information as to food requirements. The publication of Health Bulletin No. 23 'The Nutritive value of Indian Foods and planning of satisfactory diets' has made available to the public useful knowledge about Indian foodstuffs. Besides carrying out experiments in nutrition, annual classes are held at which candidates from all over India are trained in the problems of nutrition. The Coomoor laboratories undertake the task of collaboration in the nutrition work of the League of Nations and act as a liaison laboratory for the Far Eastern countries. The nutrition advisory committee of the Association has been recognised by the Government of India as the National Advisory nutrition committee for India.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys of the world. It was initiated in 1845 with a view to make a geological examination of the coal formations of India in order to provide accurate information on the mode of occurrence of the coal seams and thus enable mining operations for the extraction of coal to be conducted with knowledge and confidence. By 1857, the activities of the Geological Survey of India included a systematic geological survey of the whole of India as well as special investigations in connection with mineral deposits. The gazetted cadre of the Department at present consists of a Director, 4 Superintending Geologists, 12 Geologists, 1 Chemist and 10 Assistant Geologists.

The primary function of the Geological Survey of India is to investigate and estimate the mineral resources of the country. The fundamental work underlying such investigations is a thorough comprehension of the geological structure of the country and for this purpose a systematic field geological survey is undertaken and geological maps are prepared. From the data thus obtained it is possible almost automatically to locate the possible sources of mineral wealth. A considerable portion of the mineral wealth of India has been discovered direct by the Department while of the remainder (excluding Mysore which maintains its own Geological Department) the discoveries have been in a large measure rendered possible by the work of the Department.

The regular field work of the Department is supplemented by work at headquarters involving the study of specimens, completion of field maps and the writing of reports. The results of mineralogical and petrographical study often require confirmation by chemical investigation.

For this purpose a chemical laboratory has been provided in which specimens of minerals, ores and rocks sent in by the public for determination are also examined. As a rule it is not possible to make quantitative determinations, but specimens are identified in return for the name of the precise locality from which they have been obtained and this information is kept confidential if so desired. After study, the specimens collected in the field are stored in the Indian Museum for future reference, to which the public (including students) have access. In all branches of Geological work, it is necessary to compare new results with those previously obtained both in India and abroad and for the purpose a Library is maintained in the Department. This Library is open to those who wish to consult geological and mining publications.

The results of the investigations and researches of the Department are published in three series of publications. These are—(a) Memoirs which are devoted to the more complete surveys, dealing either with a particular region or with a particular mineral; (b) Records which consist of shorter papers on stratigraphical, mineralogical, petrological or palaeontological subjects. (c) Palaeontologia Indica containing the result of palaeontological work with numerous illustrative plates.

The advice of the Geological Survey of India is obtained by the Central Government on all questions of mineral policy.

The functions of the Geological Survey of India are not confined to the investigation and estimation of mineral resources. The Department is prepared to advise and is frequently consulted on problems of water-supply, sites

for storage dams and reservoirs, location of tunnels and bridge foundations, stability of hill-sides, suitability of stone for building and road metal and other engineering aspects of geology. The Department has also been paying considerable attention in recent years to questions of earthquake danger, flood control and drainage on the one hand and the smelting of iron-ore, cement manufacture and the generation of electricity from coal on the other hand. It also undertakes to present collections of minerals, rocks and fossils to schools and colleges and to give lectures to students and at times to the public with a view to popularise the study of geology.

The chief aim of the Geological Survey is the development of the mineral resources of India. As mineral development is a Provincial subject under the new constitution, the work of the survey is done largely for the benefits of the Provinces. Every year before the programme of the field surveys is made, each Provincial Government is asked whether any geological investigations, mineral survey or engineering enquiry is desired in the Province during the regular field season. When any such work has to be done, it is included in the programme of work and is carried out as a normal work of the Department without any charge. But if any special problem has to be dealt with which does not come under the regular operations of the Department, e.g. a mineral survey of a particular area or an enquiry connected with a great engineering project, a charge is made for the services of the officer deputed for such work.

Director.—Dr. Cyril S. Fox, D.Sc., M.I. Min.E., F.G.S.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years' purchase on the net Municipal assessment, in the absence of a report from a competent architect.

Scale of probate duty.—

Up to Rs. 1,000—Nil.

For the next Rs. 9,000 (i.e. up to Rs. 10,000) 2%; for the next Rs. 40,000 (i.e. up to Rs. 50,000) 3%; for the next Rs. 50,000 (i.e. up to Rs. 100,000) 4%; for the next Rs. 100,000 (i.e. up to Rs. 200,000) 4½%; for the next Rs. 50,000 (i.e. up to Rs. 250,000) 5%; for the next Rs. 50,000 (i.e. up to Rs. 300,000) 5½%; for the next Rs. 100,000 (i.e. up to Rs. 400,000) 6%; for the next Rs. 100,000 (i.e. up to Rs. 500,000) 6½%; for amounts exceeding Rs. 500,000 (or the portion over Rs. 500,000) 7%.

In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties, have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed, probate is ordered to be granted.

Earthquakes.

Physical divisions of India and their relation to Earthquakes.—The Indian continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute India's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophes, as we know from our recent experience of the Bihar earthquake (January 1934).

The triangular portion of the Peninsula proper constitutes a stable landmass—a *Horst*—as the geologists call it—and is the third and most stable region in India, being comparatively free from severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this. These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by Mr. W. D. West of the Geological Survey of India.

Causes.—It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the great ones are almost invariably the result of dislocations along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes. In the case of thrust planes certain sets of rocks override others, instead of being merely dislocated. The epicentre, that is the place of maximum intensity, frequently coincides with these faults or thrust planes, which proves that a close relationship exists between earthquakes and the dislocations. A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyaaukkyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes. It may, however, be pointed out that it is only such "faults" as are still active that give rise to earthquakes. Thus the faults in

the Peninsular area appear to be inert and therefore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. There is, however, no consensus of opinion on this point for in Norway, where the steep mountain ranges are subject to rapid denudation, there are no earthquakes. The cause may be more deep-seated as, for example, differential cooling and contraction of the earth's interior. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec. 1927). The regions where mountain ranges, take sharp bends, being highly folded, are naturally areas of pent up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Suleiman, Bugti or Kirthlar ranges.

Frequently more than one cause contributes to these earthquakes and the results are then even more disastrous.

Factors Controlling Damage and Loss of Life.—The intensity of the earthquake is not the only factor upon which the extent of damage and loss of life depends. Much depends upon the time of shock, the nature of the buildings, the habits of the people, etc. Thus the amount of damage done is often greater in India, where *pucca* houses are more common, than in Burma, where houses are mostly wooden, though the latter may suffer more from fire, as happened in the case of the Pegu earthquake (5th May, 1930).

The time at which the earthquake occurs makes a considerable difference to loss of life, for an earthquake occurring at night takes people unawares. (Kangra, 20,000 lives lost; Quetta, toll of life 25,000). Had the Bihar earthquake, in which 10,000 lives were lost, occurred at night the toll of life would have been unthinkable. Dr. A. M. Heron, Director, Geological Survey, makes the point that communities suffered more heavily than others because more of their number slept indoors and, being better off, lived in two storied houses, which naturally suffered more damage. The fact to be emphasised is that the loss of life, etc., does not entirely depend upon the severity of the shock, but upon the time of occurrence and various other factors.

Sources of Information.—Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A.D. occur are the *Tārīkhul Khulafā* (History of the Caliphs), the *Alkamul-fil Tārīkh* by

Ibn-nathir—a historical work of the Arabians, the *Mir-ât-ul-‘Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Baddoni* (Bibliotheca Indica), Bábar's memoirs, Kháfí Kháns *Muntakhab-ullabáb*, etc. Much information is gleaned from the Journals of the *Royal Asiatic Society of Bengal*, the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn.

Historical Review.—The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Daibul or Daipul, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Táríkhul Khulafá* (History of the Caliphs) and in *Alkámil-fí Táríkh*. According to him both these works mention the month of Shawwál (Hijra 280) as the date of occurrence. Since the month of Shawwál commenced 90 days before the 15th of March 894 A.D. that is the 14th December 893, the date of this earthquake is fixed by Oldham about the close of A.D. 893 or early 894 A.D.

6th July 1505.—This earthquake affected Afghanistan and Northern India. It is recorded that great fissures appeared in many parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month. Oldham mentions that this earthquake is recorded in the *Mir-ât-ul-‘Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, in *Baddoni* (Bibliotheca Indica Vol. I, p. 319) in the Memoirs of Bábar (Erskines edition, p. 170) in *Firishlah* (Lucknow edition, p. 183) and its date is therefore authentically recorded.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhugur in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected India occurred in 1668, between the dates 2nd—11th May. Its effect was so serious that Samáji or Samtawáni—a town of 30,000 inhabitants sank into the ground. A record of this appears in the *Mu‘asir-u‘ A‘lamgiri* (Edit. Bibl. Indica, p. 74).

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the 14 Muharram of Aurangzib's 12th year (*Mir-ât-ul-‘Alam*, an unpublished work of Bakhtwar Khan) that is, the 4th of June 1669.

This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow!

Kashmir and Attock were affected by shocks on 22nd June 1669 and 23rd June 1669 respectively, but not much damage appears to have been done.

A severe earthquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river!

Bengal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of India—Calcutta, Kashmir, Onzole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

16th June 1819.—This was one of the worst earthquakes experienced in India. Its effect was the severest in Cutch, the chief town of which—Bhuj—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on 29th October 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

1827 Sept. (before 26th Sept. 1827).—The fort of Kolitaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

6th June 1828.—There is record of at least eighty earthquakes affecting the Indian region between the aforementioned date and the year 1839, but of these only two are worth mention, namely, the one that shook the vale of Kashmir on 6th June 1828 and the other that affected Nepal and the eastern and central region, Northern India. In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day!

26th August 1833.—Felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

An earthquake of great intensity affected Burma, more particularly Amarapura and Ava, on 23rd March 1839. It is reported that shocks continued for four or five days, every fifteen to thirty minutes. 200–400 lives were lost and pagodas and other buildings in Ava, Amarapura and Sagalng suffered heavily.

19th February 1842.—Lasted for about three minutes in Kahul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Numerous later earthquakes which occurred in different parts of the Indian region do not call for much attention as they were of minor importance. Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singrurgarh, Bellary, Kurnool, Belgam were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Severe shocks, local in their effect, occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

24th August 1858.—Burma was affected, but the shocks were not of great intensity. False Island situated south-east of Cheduha Island (18° 38' N; 93 55½ E) disappeared entirely under the Ocean. The same earthquake affected the Punjab and Bengal, but very little damage was done.

10th January 1869.—Experienced in Assam (Cachar), total area where shocks were felt was 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of 31st December 1881. The radius of the area affected was about 200

miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazarihagh, Akra, Ootacamund and Calcutta in India, and in Burma at Akyab where it was followed by the eruption of a mud volcano in Ramri. The northernmost point affected was near Monghyr.

30th May 1885.—This earthquake, although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300–450 miles, the total area affected being about 110,000 square miles.

14th July 1885.—The epicentre of this earthquake was north-west of Dacca. It was felt violently throughout Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

20th December 1892.—This was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet! The earthquake was, however, local in its effects.

The worst earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

21st October 1909.—This earthquake affected the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15–45 miles. The elongated epicentre was N.W.—S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent earthquake occurred over the greater part of the Northern and Southern Shan States on 21st May, 1912, and was felt practically over the whole of Burma, Siam and Yunnan. An area of 125,000 square miles was affected. Shocks continued the following day and were followed on the 23rd May by a severe shock which was felt over an area of 375,000 square miles. Numerous after shocks continued in May, June, July and August, when they finally ceased. The epicentre was close to the great Kyaukkyan fault in the Northern Shan States.

No severe earthquake is recorded during the six years following the last earthquake in Burma, but a violent shock was felt on 8th July 1918 and affected Eastern Bengal, Assam, Burma, North-west India as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

17th December 1927.—Was experienced in Rangoon, but very little damage was done. Affecting as it did a big commercial city like Rangoon its importance cannot be denied. Investigation appears to show that the shock was due to "forces of uplift causing movement along lines of weakness below the deltaic alluvium." Although the area is covered with alluvium and direct observations are not possible, the probability of such a zone of weakness existing in the neighbourhood of the town must be accepted.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1929 in the North-West Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 kms., which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

8th August 1929.—This earthquake, which affected the small town of Swa in Burma, was connected with several of the later earthquakes that occurred in different parts of Burma—the Pegu earthquake of 5th May 1930, the Podo earthquakes of July to December 1930 and the Pyu disaster of 4th December 1930. The epicentral area was quite small and lay about 6 miles to the north-west of Swa. Damage was done to railway lines and bridges. Loaded trucks were lifted off the track and thrown to one side. The shocks were due to movement along a fault in the Tertiary rocks, more or less parallel to the great fault which is known as the Boundary Fault.

A violent shock occurred at about 8-15 P.M. on 5th May, 1930, and practically levelled whole town of Pegu. About 550 lives were lost and considerable damage was done to property in Rangoon as well. The actual area affected was

about 220,000 square miles. This earthquake came without any preliminary warning and lasted only 30 seconds. The earlier Burmese earthquake previously mentioned was presumably a forerunner of the present one and did not indicate the dying out of still earlier movements. It is thought that the movement was connected with the boundary faults of the Shan Plateau, which was accentuated by the forward movement of *terra firma* into the gulf of Martaban.

Assam was shaken by a severe earthquake on 3rd July, 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

3rd 4th December 1930.—Several severe shocks were felt between 10-15 P.M. and 1-22 A.M. in Pyu, Burma. Most of the brick buildings were destroyed and about 30 persons lost their lives. The shocks were felt over an area of approximately 220,000 square miles.

27th August 1931.—This was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Suleiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

15th January 1934.—This, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected India. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitamarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Motihari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 P.M.), for had it occurred at night it would have been one of the worst of such disasters experienced upon the earth.

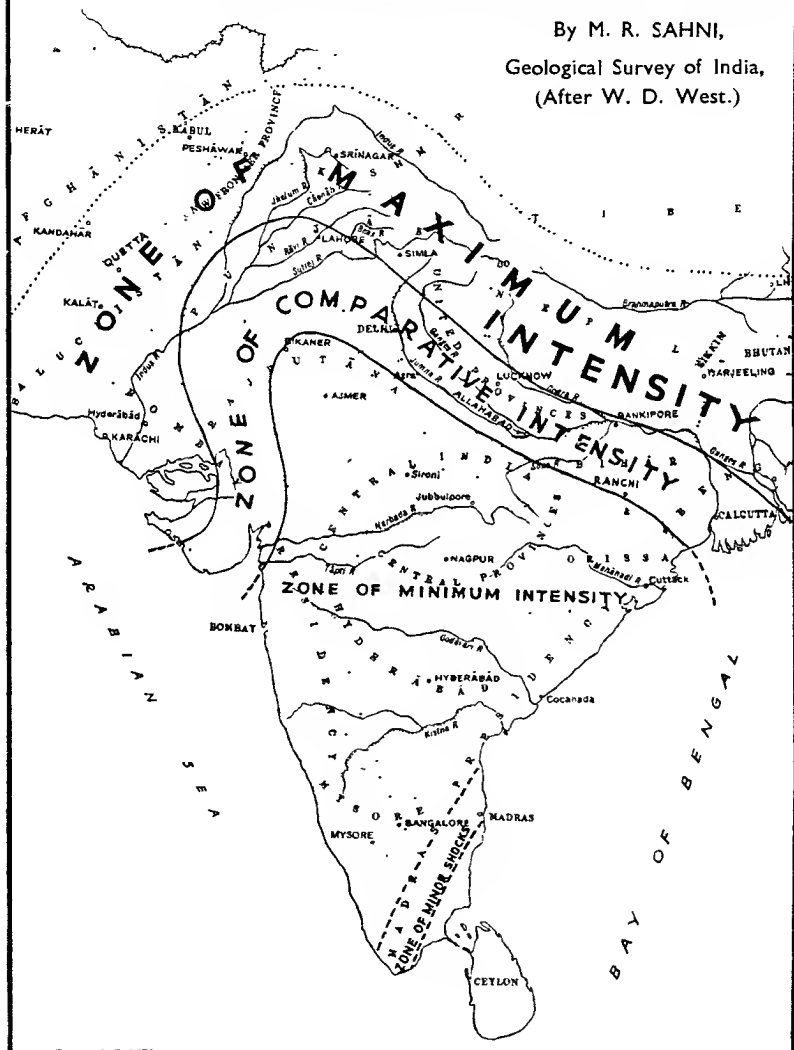

31st May 1935.—The Quetta earthquake is one of the latest of the more violent catastrophes that have overtaken the Indian region. This can be estimated from the fact that 25,000 lives perished and damage to private property, Railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The earthquakes of this region are probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

MAP SHOWING THE EARTHQUAKE ZONES OF INDIA.

By M. R. SAHNI,

Geological Survey of India,

(After W. D. West.)

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Communications of the Government of India. For the efficient working of the Department there is a Finance Officer, Communications. There is also a Deputy Director-General, Finance, attached to the office of the Director-General of Posts and Telegraphs who assists the D. G. containing staff of 11.

Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services) and eight Assist. Deputy Directors-General.

For postal purposes, the Indian Empire is divided into eight circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first seven is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies. With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration, and it started its career under a separate administration under the new Government of Burma.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Sind and Baluchistan Circle, the Director is assisted by two Assistant Directors. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually

The **Inland Tariff** (which is applicable to as indicated below) is as follows:—

subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

Parcels not exceeding 12½ seers (1,000 tolas) in weight:—

	Rs. a.
Not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden should be registered. There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee.

	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 3

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 upto Rs. 600	0 4

for each complete sum of Rs. 25. and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary—Re. 1 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.

	Rs. a.
Where the value insured does not exceed Rs. 100	0 3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0 4

Where the value insured exceeds Rs. 150 Rs. a. but does not exceed Rs. 200 0 5

For every additional Rs. 100 or fraction thereof over Rs. 200 and upto Rs. 1,000 0 2

For every additional Rs. 100 or fraction thereof over Rs. 1,000 0 1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below), is as follows:—

To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates. To Burma—1½ annas for the first tola and 1 anna for every additional tola or part thereof.

To the United Kingdom, Eire (Ireland), Egypt, Palestine, Iraq and all British colonies and possessions except Aden, Ceylon and Burma, } 2½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

To other countries, } 3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single	2 annas.
„ Reply	4 annas.

Postcards to Burma: Single 1 anna and reply 2 annas.

Printed Papers.—¾ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight 3½ annas.

For every additional 2 ounces or part of that weight ½ anna.

Samples.—1½ annas for first 4 ounces and ¾ anna per 2 ounces thereafter.

Printed Papers, Business Papers and Samples.—To Burma, 9 pies for the first five tolas and 6 pies for every additional 5 tolas or part of that weight.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

(1) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

		Via Gibral- tar.	Over- land.		<i>Printed Papers and Business Papers—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.</i>
For parcel		Rs.	a.	p.	Rs. a. p.
Not over 3 lbs.	..	1	8	0	1 13 6
Over 3 lbs. but not over 7 lbs.	2	12	0	3	1 6
" 7 " "	11	"	3	15	0 4 2
" 11 " "	22	"	6	3	0 7 3
					0 39
					31 inches in length plus twice the diameter and 31 inches in any one direction

These parcels are delivered by the post office and the postage paid carries them to destination

- (ii) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from India through the medium of the P & O. S. N. Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London; if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P. & O. S. N. Co cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit in India. No acknowledgment of deliver can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Hong-kong, Malaya (the Straits Settlements, (including Labuan-British) and the Federated Malay States of Perak, Selangor, Negri-Sembilan and Pahang), Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—No limit.

To all other destination—4 lbs. 6 oz.

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Hong-kong, Malaya, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs. or 20 lbs.

Limits of Size.

Letters—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note—Printed papers sent open, i.e., without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Ceylon, Hong-kong, Malaya, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

Money Orders—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

	Rs.	a.
On any sum not exceeding Rs. 10	..	0 3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	..	0 6
On any sum exceeding Rs. 25	..	0 6
for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas		

To countries on which money orders have to be drawn sterling, the rates are as follows:—

	Rs.	a.
On any sum not exceeding £1	..	0 4
" " exceeding £1 but not exceeding £2	..	0 7
" " " £2 " "	..	0 10
" " " £3 " "	..	0 13
" " " £4 " "	..	1 0
" " " £5 " "	..	1 0
for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.		

Insurance fees (for registered letters and parcel only).

Registration fee.

For each letter, post-card & packet of printed or business papers and samples .. 3 annas.

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not Annas
exceed Rs. 180 4½

For every additional Rs. 180 or
fraction thereof 4½

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not Annas
exceed £ 12 4½

For every additional £12 or
fraction thereof 4½

Acknowledgment fee.—3 annas for each registered article. 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

Air Mails.—Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The Inland Air fees are as follows :—

(i) For a postcard .. 6 pies *plus* ordinary postage.

(ii) For a letter and packet.. 1 anna for each tola or part thereof *plus* ordinary postage.

For Air fees to foreign countries, see April 1940 Supplement to the *Post and Telegraph Guide*.

Magnitude of Business in the Post Office :—
At the close of 1938-39, there were 101,515 postal officials, 24,303 post offices and 160,540 miles of mail lines. During the year, 1,241 million articles, including 39.4 million registered articles were posted; stamps worth Rs. 65.4 millions were sold for postal purposes; about 40 million money orders of the total value of Rs. 743 millions were issued; 835 thousands of Indian Postal orders to the value of Rs. 23 lakhs were sold; a sum of Rs. 158 millions were collected for tradesman and others on V. P. articles, about 3 million insured articles valued at 734 millions of rupees were handled. Customs duty aggregating over 6.7 million was realised on parcels and letters from abroad; pensions amounting to about Rs. 17.2 millions were paid to Indian Military pensioners and nearly 16,000 lbs. of quinine were sold to the public. On the 31st March 1939, there were 4,241,000 Savings Bank Accounts with a total balance of Rs. 818.6 millions and 98,000 Postal Life Insurance Policies with an aggregate assurance of Rs. 194 millions.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering (including wireless) side of a Chief Engineer, Telegraphs, with one Deputy Chief

Engineer, one Asstt. Chief Engineer and one Assistant Deputy Director-General. For traffic work there is a Deputy Director-General, with the Assistant Deputy Director-General. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. These five Circles are divided into eighteen Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification proved an unqualified success and was gradually extended to other Circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the Circles are now controlled by the Postmasters-General.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs

Administration. It now forms part of the Government of Burma which started its independent career on and from that date.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Burma or Ceylon are classed as Inland telegrams. The tariff for Inland telegrams is as follows:—

	For delivery in India.	
	<i>Private and State.</i>	
	<i>Express. Ordinary.</i>	
	Rs. a.	Rs. a.
Minimum charge ..	1 2	0 9
Each additional word over 8 ..	0 2	0 1

	For delivery in Burma.	
	<i>Private and State.</i>	
	<i>Express. Ordinary.</i>	
	Rs. a.	Rs. a.
Minimum charge ..	2 4	1 2
Each additional word over 8 ..	0 4	0 2

	For delivery in Lhasa (Tibet).		For delivery in Ceylon.	
	<i>Private and State.</i>		<i>Private and State.</i>	
	Ex. press.	Ordinary.	Ex. press.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge. 1 8	0 12	2 0	1 0	
Each additional word over 12 ..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram ..	Minimum charge for an ordinary telegram.
Notification of delivery	Minimum charge for an ordinary telegram.
Multiple telegrams, each 100 words or less 4 annas.
Collation One half of the charge for an ordinary telegram of same length.

For acceptance of an Express telegram during the hours when an office is closed.

If both the offices of origin and destination are closed ..	2
If only one of the offices is closed ..	1
If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office ..	1

Signalling by flag or semaphore to or from ships—per telegram

The usual inland charge plus a fixed fee of 8 annas.

Boat hire Amount actually necessary.

Copies of telegrams each 100 words or less 4 annas.

	For delivery in India.		For delivery in Ceylon.	
	Ex. press.	Ordinary.	Ex. press.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 0	0 8	1 0	

Each additional 5 words over 40 in respect of India, each additional four words over 32 in respect of Ceylon .. 0 2 0 1 0 2

The address is free.

Greeting Telegrams.—Greetings and messages of congratulations may be sent by telegram at reduced rates on occasions of (1) Christmas and New Year (2) Diwali (3) Birthday (4) Id (5) Conferment of Title (6) Marriage (7) Examination (8) Bijoya (9) Journeys (10) Elections and (11) Acknowledgment for greetings.

The charges payable will be 6 annas or 12 annas for each such telegram according to class, Ordinary or Express, consisting of not more than 6 words as follows:—

- 4 words in the addressee's name and address;
- 1 word as senders name.
- The message consisting of Stock Phrases will be counted as one word.

Each additional word over 4 words in items (a) or 1 word in (b) will be charged at 1 anna for Ordinary and 2 annas for Express. In the message itself no additional word will be allowed.

Inland De Luxe Telegrams.—Senders of Greetings telegrams to or from offices in India may also use their own phraseology in such telegrams instead of using the Stock Phrases, on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

This DE LUXE service is not applicable to telegrams for Burma.

The sender of a DE LUXE telegram should write before the address the special instruction =LX= which will not be charged for.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

Cables are not now accepted to the following enemy or enemy-occupied countries.—Germany, Italy, Belgium, Denmark, Norway, Luxemburg and France.

Urgent Telegrams—

Rate double of ordinary rate.

Daily Letter Telegrams—

One third ordinary rate with a minimum charge for 25 words.

Code telegrams are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire are accepted at 2/3rds of the ordinary rate (*vide clause 425, P. & T. Guide*).

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration, Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras or Port Blair the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph:—

Total charge
per word.
Ordinary. Code.
Rs. a. Rs. a.

- (1) All Government or Private Radio-telegrams, excepting those mentioned in (2) to (4) below .. 0 13 0 8
- (2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy .. 0 8 0 3
- (3) Radio-telegrams to Spanish or Swedish ships .. 0 12 0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, e.g., R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses and telegraph redirection under orders of the addressee.

Foreign De Luxe Telegrams.—Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character and size of four annas, the charge at the time of the class (i.e. Urgent, D.L.T., etc.) is charged for such telegrams.

Greeting Telegrams.—Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th January inclusive at special reduced rates, subject to a minimum charge of 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Socials Telegrams.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 101,780 miles of line including cable and 628,196 miles of wire including conductors respectively, on the 31st March 1939. The numbers of departmental telegraph offices were 257 and 84, respectively, while the number of telegraph offices worked by the Post Office rose from 1634 to 4,069.

The increase in the number of paid telegrams dealt with is shown by the following figures —

		1897-98.	1938-39.
Inland	Private ..	4,107,270	12,201,585
	State ..	860,382	958,161
	Press ..	35,910	440,325
		1897-98	1938-39
Foreign	Private ..	735,679	2,690,137
	State ..	9,896	23,823
	Press ..	5,278	59,374
		5,754,415	16,373,405

The outturn of the workshops during 1938-39 represented a total value of Rs. 19,88,000.

Wireless.—The total number of departmental wireless stations open at the end of 1938-39 was thirty-three. viz., Ahmedabad (two stations), Allahabad (two stations), Bombay (two stations), Calcutta (three stations), Car Nicobar Chittagong, Delhi (three stations), Gaya (two stations), Hyderabad, Jodhpur (two stations), Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Ormara, Pasni, Peshawar, Poona, Port Blair, Sandheads (two pilot vessels), of which only Ormara, Pasni, and Port Blair booked telegrams direct from the public.

Seven of these stations were for communication with ships at sea and twenty-two worked as aeronautical stations in connection with regular air services.

The Duplex high-speed telegraph service and the wireless telephone service between Rangoon and Madras continued to work satisfactorily.

Telephones.—On the 31st March 1939 the number of Departmental telephone exchanges was 274 with 24,113 straight line connections and 3,392 extension telephones. The number of telephone exchanges established by Telephone Companies was 23 with 49,329 telephones.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1939 was 12,563.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1938-39 was Rs. 39,23,776 and Rs. 17,44,29,090 respectively. The receipts for the year ended 31st March 1939 amounted to Rs. 11,67,60,000 and charge (including interest on capital outlay) of Rs. 11,48,62,000, the result being a net gain Rs. 18,98,000.

Public Health.

The history of the Public Health departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, and funds were available. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. This condition continues under the Government of India Act of 1935. The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed."

Vital Statistics.

India's birth rate in 1937 was more than twice that of England and Wales, her death rate was nearly twice that of England and Wales and one and a half times that of Japan, and her infantile mortality rate was nearly three times that of England and Wales and one and a half times that of Japan. "The information furnished for the great group of infectious diseases of world import, *i.e.*, plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says an earlier Public Health Report) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication

is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylotomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation." These observations are as true to-day as when they were made.

In June 1937 His Excellency the Viceroy, Lord Linlithgow, inaugurated the Central Advisory Board of Health. This body had existed prior to 1923, when it was abolished on the recommendation of the Incapable Retrenchment Committee. It has now been reconstituted on up-to-date lines, after consultation with the provinces, in a manner which brings it into conformity with the constitutional changes in the country. Its Chairman is the Member for Education, Health and Lands with the Government of India. Most of the provinces have nominated their Ministers in charge of Public Health as their representatives on the Board. The Public Health Commissioner with the Central Government is Secretary-Member and several expert officials and members of the Central Assembly are also nominated to the Board. The inaugural meeting was addressed by Lord Linlithgow, who declared that everywhere in India he discerned unmistakable signs of a growing consciousness of the value and significance of public health. His Excellency particularly drew attention to the conditions of urban housing and sanitation and the comments thereon of the Whitley Commission on Labour which is reported in 1931.

Anti-Tuberculosis Campaign.

In December 1937, Her Excellency the Marchioness of Linlithgow inaugurated a nationwide campaign against tuberculosis. The King and Queen gave practical expression to their sympathy by donating £1,000; the Viceroy and Lady Linlithgow gave Rs. 10,000, and by the end of February 1939, the sum of Rs. 76,26,502 had been subscribed. The Fund was then closed and the Tuberculosis Association of India was formed, incorporating the King Emperor's Anti-Tuberculosis Fund and King George Thanksgiving Anti-Tuberculosis Fund. A number of Provincial and State Associations were subsequently formed and affiliated with the Central Association, from which in each case they received a quota of 95 per cent. of the monies subscribed in their areas.

By the end of 1939, much progress had been made in the organised campaign against Tuberculosis. The functions of the central body are to offer expert advice, assist co-ordination and standardised methods, educate the public by propaganda and promote research. The affiliated bodies undertake the establishment of hospitals and clinics and the carrying out of preventive work. Thus there is demarcation of spheres of activity and positive results may be expected to follow in the near future.

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report.—

Province.	Births (per mille).		Deaths (per mille).	
	1937.	1936.	1937.	1936.
British India	34.5	35.6	22.4	22.6
N. W. Frontier Province	29	31	19.9	17.0
Punjab	42	43	21.3	22.0
Delhi	45	45	23.8	23.8
U. P.	33	37	19.8	21.2

Assam	29	29	20.9	18.6
Ajmer-Merwara	37	40	29.8	24.1

Mortality during 1937.

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers, diseases affecting the abdominal organs, and lung diseases, intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1937:—

Province.	Cholera.	Small-Pox.	Plague.	Fevers.	Dysentery and Diarrhoea.	Respiratory Diseases.	Other causes.	Total.

Statistical health reports for all India are always inevitably submitted as belated owing to the number of provinces from which returns have to be collated
D—Deaths. R—Rate P. M.

The Public Health Commissioner in his most recently published report, which covers the year 1937, points out that the average annual increase in India's population during the seven years from 1931 to 1937 has been just short of three millions and these years have, generally speaking, been characterised throughout by freedom from violent outbreaks of epidemic diseases. In 1937 both the birth and death rates showed slight decreases as compared with the previous year, but the net result was an increase in the estimated mid-year population of over three and a quarter millions. One deduction which may be drawn from these figures is that when the next decennial census is held in 1941, barring any violent epidemic outbreaks, the population will not fall far short of, and may well exceed, the 400 million mark which was forecast some years ago.

During 1937, whilst plague mortality was appreciably higher than in 1936, death cholera and smallpox showed large so that there was a total reduction of 90,000 deaths from these common epidemic diseases. Deaths from cholera numbered 99,054, or about 38 per cent. less than those for 1936. Smallpox accounted for 54,810 deaths, which represented a decrease of about 47 per cent. On the other hand, plague mortality rose from 10,738 in 1936 to 28,169 in 1937. Once more it is noted that the combined effect of these three diseases in the death rate was comparatively small; for the period 1925-1937 they comprised less than 10 per cent. of the total recorded mortality. It is the fevers, respiratory diseases and "other causes" under which the great majority of deaths are registered.

In respect of general health conditions as judged by the total death rate and those for specific diseases and for infantile mortality, India compares unfavourably with many countries of the world. Even in this country, however, improvement is noticeable when the experience of a period of years is taken into consideration. The general death rates has shown a steady decline between 1920 and 1937, rates for these years being 31 per mille and 24 per mille respectively. Similarly the infantile mortality rate has fallen from 195 per mille in 1920 to 162 per mille. But these figures give little comfort for complacency; India's death rate of 22.4 per mille is still nearly twice that of England and Wales, whilst the infantile mortality figures are almost three times as high.

It is pleasing to note, however, that recent years have undoubtedly witnessed an increasing awareness, on the part of both Provincial Governments and the educated public, of the magnitude of the problems associated with the building of national health on sure foundations. Advance has been made, for instance, in the provision of public health staffs in the provinces, in the better control of festival centres and in the free distribution of quinine to malaria-stricken populations, whilst the efforts of individuals, of voluntary organisations and of public-health staffs in educating public opinion in different ways, have been a commendable feature in different parts of the country.

Further, a number of intensive experiments in restricted areas are in progress, the object of these "Health Units," as they are called

being to evolve types of public health organisations suited to a wider sphere, also, a between the province Indian States has been secured by the operation of the Central Advisory Board of Health on which the Government of India, the Provinces and States are all represented.

SOCIAL LEGISLATION

Repeated stress has been laid in the Health Commissioner's reports on the fact that public health cannot be regarded as an entity distinct from the general, social and economic life of the community. It is, therefore, satisfactory that the advent of provincial autonomy and the conferment of extensive powers on Provincial Governments have been followed in many provinces by social legislation which will undoubtedly have far-reaching effects on the well-being of the people. laud tenure and a few examples, are all receiving serious attention and, in so far as legislative and administrative action goes to raise the standard of life, these measures will inevitably help in improving the standard of public health.

In order that there may be no undue feeling of pessimism, it should always be remembered that, less than a century ago, conditions in Great Britain were not much different from those found in India to-day and that, with respect to other countries, reduction of the general death rate below that at present recorded in India dates back to only a few years. There seems no reason why India should not accomplish what has been achieved in other parts of the world, if only organised effort is continued and if public support is given to that effort.

POPULATION PROBLEM

In successive reports Health Commissioners have drawn attention to the urgency and importance of the population problem and, as this question has such an important bearing on all aspects of national reconstruction and to public health in particular, no apology is needed for returning to the subject. No useful purpose is served by shutting one's eyes to indisputable facts. The subject is no academic one; it is, for instance, not merely a matter of the verification or otherwise in this country of the Malthusian doctrine of population outstripping the food supply in the presence of unrestricted multiplication of numbers. Available data may be insufficient for drawing definite conclusions, but it seems too optimistic to assume that the population problem is neither pressing nor deserving of serious study because of possible extensions of improved agricultural practice and the possible application of new scientific discoveries.

In India the low standard of living and the steadily growing population constitute a disquieting combination, but the resources of the country are immense and there is no need for despair so long as the different governments are determined so to organise the material and human resources at their disposal as to produce the maximum benefit to the community. Most of the questions relating to the health and economic welfare of the people are statutorily

the functions of provincial Governments and it is their responsibility to set up the machinery necessary for the study of demographic problems within their areas of jurisdiction. In addition to official agencies, universities and research institutions should be induced to help and the work could perhaps be suitably co-ordinated by the formation of a committee in each province to plan the necessary investigations and to place its expert knowledge at the disposal of the Government so that a sound economic and social policy might be reached. Such a committee could also perform the extremely useful function of educating public opinion on correct lines.

Natural increases accruing from excess of births over deaths for decennial periods from 1871 to 1930 and for individual years from 1931-37 are given in the following table:—

	Annual number of Births.	Birth rate p.m.	Annual number of deaths.	Death rate p.m.	Annual excess of births over deaths.
1871-1880 ..	Not available.	..	3,540,202	20
1881-1890 ..	4,565,687	24	5,058,578	26	492,891
1891-1900 ..	7,174,694	34	6,662,417	31	512,277

1937 ..	9,388,457	34.5	6,112,375	22.4	3,276,082

THE HEALTH OF THE BRITISH ARMY.

General Health statistics of the British Army in India during the year 1937.

1937	Average Strength.	Admissions.		Deaths.		Invalids sent Home.		Invalids Discharged from Service.		Average Constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers ..	2,055	866	421.4	7	3.41	37	18.00	28.02	13.64
Other Ranks ..	47,388	26,908	567.8	102	2.15	520	10.97	1,280.21	27.02
Women ..	4,148	1,326	319.7	15	3.62	42	10.13	45.95	11.08
Women confinement	780	..	2	30.24	..
Children ..	6,157	2,206	358.3	79	12.83	16	2.60	68.78	11.17
Royal Navy	108	..	3	6.49	..
Royal Air Force	2,105	828	393.3	11	5.23	20	9.50	24.78	11.77

Among officers of the British Army in India, 421.4 per 1,000 were admitted to hospitals during the year, compared with 428.8 in 1936. There were seven deaths, giving a ratio of 3.41 per 1,000 compared with 14 and 6.17 in 1936. The average constantly sick in hospital was 28.02 or 13.64 per 1,000 of strength as compared with 31.54 or 13.90 in the previous year. A total of 1,154 or 561.6 per 1,000 of strength were treated as out-patients.

Of British soldiers 26,908 or 567.8 per 1,000 were admitted to hospitals, compared with 532.1 in 1936 and 580.5 in 1913. There were 102 deaths or 2.15 per 1,000 of the strength compared with 129 or 2.48 per 1,000 in 1936.

The most important causes of mortality among soldiers were:

General injuries	23
Infectious diseases	19
Local injuries (including 6 gun-shot wounds)	18
Pneumonia	9
Digestive diseases	8
Urinary diseases	6
Circulatory diseases	6

There were 520 or 10.97 per 1,000 of the strength sent home as invalids compared with 572 or 10.99 per 1,000 in 1936.

The principal cause of admission to hospital of British troops was malaria of which there were 2,111 cases, diseases next in order being cellulitis with 1,957 cases, tonsillitis 1,362, gonorrhoea 1,345, dysentery 1,209, sandfly fever 1,167, influenza 776, bronchitis 774, diarrhoea 762 and sprain 749.

1937 was, from the health aspect, a good year for both British and Indian troops. There was a reduction in hospital admissions among both groups as compared with 1936 (also a good year), of 14.3 per 1,000 of strength among British troops, and 37.0 per 1,000 of strength among Indian troops. The admission ratio appears generally to be on the downward trend and although an improvement on that of previous decades, (in 1920 it was 1,071.5 per 1,000 for British troops and 762.3 per 1,000 among Indian troops), cannot be considered satisfactory according to modern health standards as long as approximately 568 out of every 1,000 British soldiers and 390 out of every 1,000 Indian soldiers are admitted to hospital during the course of a year. It is satisfactory to record in addition to the drop in hospital admissions a reduction in the average constantly sick, death and invaliding rates. An encouraging feature during the past few years and particularly during 1936 has been the reduction in incidence of such diseases as malaria and the enteric group of fevers.

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1937.

	Average strength.	Admissions.		Deaths.		Invalids sent to U. K.		Invalids discharged in India.		Average constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers	1,841	661	359.0	8	4.35	17	9.23	21.19	11.51
Indian Ranks ..	98,901	38,735	391.7	175	1.77	543	5.49	1,498.18	15.15
Followers	23,701	6,613	279.0	94	3.96	94	3.96	233.15	9.84
Others *	1,661	..	25	57

* Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces, R. A. F. Civilians and Pensioners.

The admission rate of officers sick in hospital in 1937 was 359.0 per thousand of strength as compared with 364.3 in 1936. Among soldiers 38,735 or 391.7 per 1,000 of the strength were admitted to hospital, compared with 426.5 in 1936. There was thus a decrease of 34.8 per 1,000 on the 1936 figures. The death rate among Indian soldiers shows a decrease of 0.39 per 1,000 from 2.16 in 1936 to 1.77 in 1937.

LEPROSY IN INDIA.

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. Leprosy has been known in India for over 3,000 years. In 1921, when a Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything

more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committee are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest:—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible;

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable

to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects:—

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer.

The Council's main work during the first several years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product of its activities is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

The survey figures published by the Council have aroused much interest throughout India and many Provincial Governments give grants-in-aid for asylums, homes and clinics. Through the generosity of the Council and of the Calcutta School of Tropical Medicine training in modern methods of treatment is given to doctors sent up by all Provinces and several Indian States and they, in turn, pass on their training to others in their own parts of the country. The Calcutta School commenced leprosy research in 1920, is still continuing it and has obtained most valuable results. Treatment has consequently improved and early cases are more readily coming forward than formerly.

His Excellency the Viceroy is the President of the Indian Council, the Director General of the I.M.S., the Chairman of the Governing Board, and Sardar Bahadur Balwant Singh Puri, the Honorary Secretary.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, notorious for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallen, has now spread all over the country and gives medi-

cal treatment to thousands of patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great **Blindness Belt**. According to the last census returns there are 480,000 totally blind persons in this population of more than 300 millions. That is an incidence of $1\frac{1}{2}$ totally blind to every thousand of the population. But the census figures are very defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nask district an incidence of at least 4.33 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palampur 7 per thousand was found. If, as is not unlikely, this sort of error of underestimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like $1\frac{1}{2}$ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpretation in every country. In a report on the Prevention of Blindness, published by the League of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterates, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. The **All-India Blind Relief Association** which made an analysis of a very large number of patients attending its camps and dispensaries a few years ago found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

Associations known as "**Blind Relief**" Associations have been working for several years in Western India, in conjunction with Government Hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They also work by means of trained village workers whose duty it is to find out the "hidden blind" and get them to the medical centre for relief; to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neonatorum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown.

Considerable progress was made in 1934 with a scheme which the Indian Red Cross Society is carrying out in co-operation with the National Institute for the Blind, London, for training teachers in the prevention of eye disease. The National Institute gave £50 for organising eye courses for the teachers and £120 for free distribution of literature. Courses of instruction are being organised and general publicity done.

St. Dunstan's Section of the War Purposes Fund—In November, 1939, His Excellency the Viceroy initiated the St. Dunstan's Section of the War Purposes Fund, to afford relief to the war-blinded, an appeal for which was carried on throughout India by Sir Clutha MacKenzie, working on behalf of His Excellency and St. Dunstan's. A small All-India St. Dunstan's Committee was formally constituted at a meeting held at the residence of the Hon'ble Sir Ramaswami Mudaliar, with Sir Ramaswami as Chairman, Mrs. T. S. Pillay as Hon'y. Secretary, and Sir Ernest Burdon and Mr. A. C. Badenoch as Hon'y. Treasurers. The Chairman emphasised at the meeting that the first claim against the funds subscribed would be for the Indian war-blinded and that, should there be a sufficient number, St. Dunstan's would establish a training branch in India itself.

MALARIA.

Malaria is without doubt India's major public health problem both from the point of view of morbidity and that of mortality. Whilst no province can claim to be free from its ravages, in some the incidence of malaria is extremely high. In Bengal, it is stated that more than two-thirds of the villages are subject to malaria and that "over 60 per cent. of the total population actually suffer from it every year. Roughly about 1,000 people die from malaria every day throughout the year." It is unofficially

estimated that over India as a whole, upwards of a million people die from malaria every year.

Moreover, its incidence is probably three times higher in the rural areas than in the towns, so that it forms a terrible handicap to improved health and a higher standard of living among the rural populations. The three main lines of attack may be classified as (1) anti-mosquito measures, (2) general quininisation and (3) improvement of the economic standard of the

people. Anti-mosquito measures on a scale sufficient to influence the incidence of malaria are probably not within the bounds of practical politics, although considerable relief would probably be attained by reduction of what is known as man-made malaria. The problem of quinine is complicated; serious difficulties deter rapid advance to any scheme of adequate quininisation of the malaria-stricken populations. Whether cheaper quinine can be made available is a matter which demands further serious study.

The Malaria Institute of India, which has for many years past been engaged in malaria researches, has made clear the directions in which practical anti-malaria works should be tackled. The time seems ripe for a wider use of the knowledge available, but it is much to be feared that financial stringency will continue to handicap progress. Recognising the importance of the malaria problem, the Government of India some years ago placed a special grant of ten lakhs of rupees at the disposal of the Governing Body of the Indian Research Fund Association for malaria research. On the advice of the Public Health Commissioner, the Governing Body decided that this grant should be devoted to intensive control schemes carried on for a period of years in restricted areas in order to demonstrate the practical method required for reduction of the incidence of malaria. Following that decision, grants were made to four provincial Governments on the conditions that those Governments contributed amounts equal to

the I.R.F.A. grants and that approved schemes should be placed in charge of experienced anti-malarial officers. In addition, a grant was made to Delhi Province for anti-malarial work in the Najafgarh Health Unit area and for additional schemes in the villages lying round the cities of Delhi and New Delhi.

In Madras, Bengal and the United Provinces, suitable areas were selected on the recommendation of officers of the Malaria Institute of India in consultation with the provincial Directors of Public Health. The grant to Assam provided additional funds to the Assam Medical Research Society which had been engaged for some years past in intensive anti-malarial work. It is believed that these five-year schemes will not only be of great benefit to the local populations concerned, but will form a valuable guide to all Governments and malarialogists in India in planning future anti-malarial work.

Whilst all these facts indicate that the problems associated with malaria have by no means been lost sight of, they are so important that much more requires to be done before any marked general reduction of malaria incidence will be obtained. Both governments and local authorities will require to allot much larger sums than in the past for anti-malarial works if permanent betterment is to be achieved. Moreover, no expenditure should in future be sanctioned by either authority until proposed preventive schemes have been thoroughly investigated and finally approved by skilled malarialogists.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. Every year more than 2½ million Indian children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres throughout India. The amalgamation of these two Bodies which took place in 1931 forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field that a consistent, widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be

made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres, many of them assisted by the M. & C. W. Bureau, Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers

of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

The Maternity and Child Welfare Bureau, which works in conjunction with the Indian Red Cross Society, spends a large proportion of its funds on education. It maintains schools for training health visitors, and nursery schools. Assistance is also given to the Welfare Centre, which provides field work for the students taking the Diploma in Maternity and Child Welfare at the All-India Hygiene Institute at Calcutta. The Bureau provides a central adviser on the subject and thus helps co-ordinate work in different provinces. The Victoria Memorial Scholarship Fund is earmarked for the training of indigenous and other midwives. There is a large and growing demand for these attendants and systematic registration of them is desirable.

INDIAN RED CROSS SOCIETY.

When the Great War first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities

are completely decentralised, and are being carried on through 27 Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of Society may be spent are:—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
3. Child welfare.
4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.
5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.
6. Home Service Ambulance Work.
7. Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised.

The Society has five grades of subscribing members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Rs. 1 and Rs. 12 annually or consolidated payment of Rs. 50. At the end of 1939 there were 21,325 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations, a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces have followed suit and at the end of 1939 the number of members was about 5 lacs.

Constitution:—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society, of whom 12 are the Vice-Presidents nominated by Provincial or State Branches, 8 selected by the Society at the Annual General Meeting from among the members of the Society, and 5 nominated by the President.

The present Chairman of the Managing Body is Major-General G. G. Jolly, C.I.E., K.H.P., I.M.S., and the Organising Secretary, Khan Bahadur Dr. Abdul Hamid.

The Indian Red Cross Society professes itself as an essentially Indian Society. Most of its members (about 96 per cent.) are Indians. It is controlled in India. Its headquarters are at New Delhi. The Society received a gift of a lakh and a half of rupees from H. H. the Nawab of Junagadh to build headquarter offices in New Delhi. It has branches in every Province of British India and in several Indian States. These branches are again sub-divided into districts, so that there is a network of Red Cross centres all over India. The provincial branches appoint representatives to the Central Committee, called the Managing Body. This Central body, after deduction of management expenses, distributes all its income from invested funds among the branches for their activities.

Like other Red Cross Societies, the Indian Society has never lost sight of its primary obligation to act as an auxiliary to the Army Medical Service in case of war. It maintains a Central Supply Depot administered by headquarters. A large number of military hospitals are supplied with additional equipment and comforts, and these are much appreciated. The Bengal Branch has a Literature Committee, which supplies regular parcels of literature to troops, especially to those stationed in lonely outposts, and many grateful letters of thanks are received. Discharged soldiers suffering from chronic diseases, particularly tuberculosis are referred by the Army Medical Service to the Red Cross, which follows up the men on their return to their villages, and arranges, where possible, for their treatment. Under this scheme many hundreds of cases have been dealt with.

The greater part of the Society's income is spent upon its peacetime programme. It seemed to those who directed the Society in its early years that the first and most crying need was to teach mothers how to bring up healthy children and child welfare has been placed in the forefront of its programme.

The health visitors employed in the child welfare centre are trained at Health Schools which are at Delhi, Lahore, Calcutta, Poona and Bombay. Several students from India have been granted scholarships by the League of Red Cross Societies to follow the international

courses for Public Health Nurses in London. The training is now arranged by the Indian National Committee of the Florence Nightingale International Foundation with the help of a scholarship given by the Indian Red Cross Society from the income of a special endowment received by the Society from the Silver Jubilee Fund.

Special mention must be made of the Army child welfare centres, most of which receive generous support from Red Cross funds. These centres are run for the wives and children of British and Indian troops, and are doing excellent work. The Central Provinces and Berar Branch of the Society opened a Nursery School in Nagpur, and this pioneer school, under Red Cross auspices, has proved a great success.

Popular health education is carried on steadily by the Society by varied methods. Health lectures in many different vernaculars are regularly organised under Red Cross auspices illustrated by films and slides.

A large number of civil hospitals in India receive regular assistance from Red Cross funds.

FINANCES.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December, 1939, stood at a capital investment of the face value of approximately Rs. 76½ lakhs. The income derived from the capital of the Society (which is 3 lakhs at present), after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

The Indian Red Cross Society maintains a Roll of Trained Nurses for civil emergencies. It also gives assistance in disasters.

The declaration of war did not find the Indian Red Cross Society unprepared. All the steps to be taken had previously been carefully thought out and embodied in the "Mobilisation Plan", which after criticism by Provincial Branches and final approval by the Red Cross and St. John Ambulance organisations was distributed to all Branches in March, 1939. On the declaration of war, the Mobilisation Plan at once brought into operation the Central Joint War Committee, consisting of the Chairman of the Indian Red Cross Society and of the Executive Committee St. John Ambulance Association, and non-official members of these two bodies, the Director of Medical Services in India, and the Red Cross Commissioner. In addition, a Central Finance Sub-Committee of 6 members was set up. Similar Joint War Committees and Finance Sub-Committees were appointed by Provincial and State Branches. The object of these joint committees, as of the similar organisation in England, is to ensure that the Red Cross and St. John Association in their war work operate as one harmonious unit. In accordance with the Mobilisation Plan a Red Cross Commissioner, Mr. H. S. Crosthwaite, was appointed with effect from 1st October, 1939. His main duties are to act as Chairman

of the Central Joint War Committee and Finance Sub-Committee, to keep in close touch with Army Headquarters and ascertain from the Adjutant General and the Army Medical authorities the comforts desired from time to time by the Indian Expeditionary hospitals. According to the information which he receives, he issues circulars to Provincial Joint War Committees explaining in what ways they can most usefully direct their energies and the energies of the numerous ladies' "work parties", which have been set up in all the big and many of the small towns throughout India.

It was arranged in the Mobilisation Plan that until an appeal brought in sufficient funds, war work should be financed by sale of the Red Cross Society's invested funds up to a maximum total of 10 lakhs of rupees. Sale

of invested funds means less income available for the important Red Cross peace work, which the Society are anxious to continue as far as possible during the war. Therefore, after the sale of 1½ lakhs of invested funds, it was decided, with the approval of His Excellency the Viceroy, to issue the appeal, which appeared in the Press on the 21st November 1939, and a sum of Rs. 1,16,068-9-0 was received at headquarters up to 31st December.

By the close of 1939 the Joint War Committee had sent a large number of hospital requirements to Egypt, Malaya and the N.-W.F. P. and also special comforts at Christmas time to Indian Expeditionary Forces, both British and Indian, in Aden, Egypt, Hongkong, Iraq, Africa, Malaya and the N.-W. F. P. and the Royal Indian Navy.

ST. JOHN AMBULANCE ASSOCIATION (INDIAN COUNCIL)

AND

ST. JOHN AMBULANCE BRIGADE OVERSEAS (EMPIRE OF INDIA).

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects :—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured ;

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room ;

(c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic ;

(d) The Organisation of Ambulance Corps, invalid Transport Corps, and Nursing Corps ;

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 361,000 certificates of proficiency in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft and over 17,000 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. In addition, over 73,000 certificates have been issued in the elementary course for school students known as Mackenzie School Course in First Aid, Hygiene and Sanitation.

The object of the Association is not to rival but to aid the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits

During the year 1939, 50,898 persons attended courses of instruction in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft. Of these 34,477 qualified for the Association's certificates : i.e. 29,423 in First Aid, 2,817 in Home Nursing, 1,833 in Hygiene and Sanitation and 204 in Domestic Hygiene and Mothercraft.

A new course of instruction in Air Raid Precautions has recently been introduced with the assistance of the military authorities. During 1939, 56 classes in this subject were held at various stations and 756 Certificates, including 203 Instructors, were issued to those who qualified for them. This instruction is at present confined to the personnel of the St. John Ambulance Brigade Overseas, but it may be extended to the general public with the approval of the provincial government concerned.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5 and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. Including a special grant of Rs. 26,250 from the Indian Red Cross Society War Fund, the total income in 1939 amounted to Rs. 62,222.

Their Excellencies the Viceroy and the Marchioness of Linlithgow and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 18 members from the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which Sir Ernest Burdon, K.C.I.E., C.S.I., I.C.S., Knight of Grace of the Order of St. John of Jerusalem, is the Chairman and Khan Bahadur Dr. Abdul Hamid, the General Secretary.

The war has greatly stimulated training in First Aid and Home Nursing, and consequently a very large number of men and women have in 1939 received training in these subjects in order to fit themselves for skilled service to the sick and wounded. A large number of new members of the Brigade, have also joined other war organizations in concert with the Indian Red Cross Society, both at headquarters and in the provinces, under the title of the Joint War Committee of the Indian Red Cross Society and St. John Ambulance Association, an account of whose activities is given under the Indian Red Cross Society.

to the last Census (1931) out of a total population of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded", an item that is not included in the figures for British India.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the Women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring them out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial branches; it gives scholarships to a number of women students at the medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 12 Provincial branches and a number of Local Committees.

The Government of India subsidise the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 14 doctors and a junior service of 2 assistant surgeons. Medical women either British or Indian, holding, registrable British qualifications, are eligible for the senior service.

The President is H. E. The Marchioness of Linlithgow. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary, Dr. G. Stapleton, C.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund, and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £27,750 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 14 women graduates in medicine of Indian Universities. Recruitment to the service is made (a) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (b) in England, by a sub-committee, including a medical man and two medical women, conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Indian Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General

of India. (b) Must be between the ages of twenty-four and thirty-two at entry. (c) She must be a first-class medical woman, i.e., she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act; but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After three years of probation have been satisfactorily passed, their appointments are confirmed.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of 14, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 175 to Rs. 225 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the 14 members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £200 a year each, paid quarterly, and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made in the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. An additional Rs. 1,39,000 was allotted to the Fund from Their Majesties' Silver Jubilee Fund in 1935. Thousands of

midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. Registration is urgently needed. The Fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February, 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 150 Medical students and 70

nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi, within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is, for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for all students. There are good playing fields and a large swimming pool was opened early in 1938. The hospital is a fine modern building with accommodation for 200 in-patients for teaching purposes and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,20,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendent, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staff are maintained, available to the general public on payment of a prescribed scale of fees. These Hospitals also act as training institutions and turn out a

yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation went a step farther, through the establishment of the Bombay Presidency Nursing Association. This was composed of the various Nursing Associations in charge of individual hospitals, and worked under the Government. The principle on which

the relations of this Association with the Local Associations was governed was that there was central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. The subject has been under discussion for years. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has established a Provincial Register preparatory to an All-India Register.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first step was taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the associations are still largely dependent upon annual subscriptions towards the maintenance of their works.

The Bombay Presidency Nursing Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association and it appeared to the Committee improbable that it could be carried out. The auxiliary function of examining and granting certificates to nurses and midwives and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations were, however, carried out. The Memorandum, Rules and Bye-laws of the Association were not revised and brought into line with the actual working of the Association. This was done towards the end of 1927, when the Committee decided that some steps must be taken to do so. Accordingly a Sub-Committee was appointed to consider the revision and amendment of the Memorandum, Rules and Bye-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the rules piecemeal and that the only way to put the things in order was to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report, the Committee agreed that the Association be incorporated by an Act on the line of the

Registration Act in the United Kingdom. Pending the passing of the Act, the New Memorandum of Association was brought into operation from 1st April 1929.

Establishment of the Bombay Nurses, Midwives and Health Visitors' Council.—The need of legislation for the Registration of Nurses, Midwives and Health Visitors had existed in the Province since a long time and with a view to protect the public from the activities of persons who misrepresent themselves to be fully qualified Nurses, Midwives or Health Visitors, Government, in April 1935, passed the Bombay Nurses, Midwives and Health Visitors' Registration Act. In the absence of State Registration the nurses trained in this Province were subject to certain disabilities and were refused Registration in other Provinces and in other countries, where state registration prevailed. The Act obtains for them the necessary status and secures their registration in other provinces in India or in other parts of His Majesty's Dominions which are willing to reciprocate with the Bombay Nurses, Midwives and Health Visitors' Council which was established in August 1935.

From the date of the establishment of the Council, the Bombay Presidency Nursing Association became defunct. The training and registration of nurses, midwives and Health visitors in this Province is now controlled by the Council. Nurses who are trained and registered in this Province can now get registration with the General Nursing Council of England and Wales and the General Nursing Council of Scotland and can practice as qualified nurses in these Countries.

Lady Minto's Indian Nursing Association.—The Lady Minto's Indian Nursing Association was founded in 1892 under the title of the "Up-Country Nursing Association" primarily, though not exclusively, to provide Europeans with the skilled services of the Nursing Profession.

The Punjab and the United Provinces were the first provinces to consider the possibility of providing nurses for private work, but it was not until 1906 that provision was made on a really adequate basis.

Lady Minto issued an appeal to the public both in India and England which met with a generous response, with the result that now Minto Sisters work in six centres and it is rare for a subscriber to the Association in any part of India to be refused the services of a nurse in case of need.

The financial liabilities of the Association are met from five sources:—

Interest on the Endowment Fund; Government Grant; Donations; Subscriptions; Fees.

It is the practice of the Association to invite people to become annual subscribers. This carries with it two advantages; priority of claim to the services of a Sister, and a reduction in the fees paid for those services. Thus Europeans who are members of the Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient.

The control of the Association is in the hands of two Committees; one in England and one in India.

The English Committee is responsible for the recruitment of the majority of the staff but if it happens that suitably and fully trained women are obtainable in India, the Central Committee in India has the power to enlist them on the spot.

In addition to this duty the Indian Committee deal with all matters of administration delegating to the Provincial Branches questions of local significance.

Her Majesty Queen Mary is a Patron of the Association.

Her Excellency the Marchioness of Linlithgow is President of the Central Committee in India.

Hon. Secretary.—Lieut.-Col. H. H. Elliot, M.B.E., M.C., M.B., F.R.C.S., I.M.S.

Chief Lady Superintendent.—Miss C. Wilson, Central Committee.

Lady Minto's Indian Nursing Association, Viceregal Estates, Simla, and Red Cross Buildings, New Delhi.

Secretary, Home Committee.—Miss R. E. Darbyshire, B.R.C., 92, Ember Lane, Esher, Surrey.

Nurses' Organisations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organisations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting an *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Trained Nurses' Association of India has a membership of 1172. The Association of superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The

Trained Nurses' Association was started in 1908, and the Nursing Journal of India began to be published in February, 1910.

The Trained Nurses' Association of India was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession; (b) to promote a sense of *esprit de corps* among all nurses; (c) to enable members to take counsel together on matters affecting their profession; (d) to elevate nursing education, (e) to raise the standard of training; (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses; and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League, the Midwives' Union, the Nurses' Auxiliary of the Christian Medical Association and the Student Nurses' Association. The combined membership of the Trained Nurses' Association of India, Health Visitors' League and Midwives' Union is 1340 and the Student Nurses' Association comprises 31 units with over 1000 members. The official organ of the Association is called "The Nursing Journal of India."

Patrons: H. E. The Marchioness of Linlithgow, Simla; H. E. The Hon'ble Lady Hope, Madras; H. E. Lady Lumley, Bombay and Her Highness the Maharani of Travancore.

President: Miss D. Chadwick, S.R.N., S.C.M., Government Hospital for Women and Children, Egmore, Madras.

Vice-Presidents: Miss A. Wilkinson, S.R.N., S.C.M., Matron, St. Stephen's Hospital, Delhi; Miss M. D. Winter, D.N. (Lond.), S.R.N., S.C.M., C.S.M.M.G.; Lady Hardinge Hospital, New Delhi.

Secretary: Miss Diana Hartley, S.R.N., S.C.M., Valley View, Coonoor, Nilgiris, S. India.

Hon. Treasurer: Mrs. E. A. Watts, Keswick, Coonoor, Nilgiris, S. India.

THE WOMEN'S MOVEMENT.

The women's movement has had a remarkably smooth run in India. Imperceptibly but steadily, during the past ten or twenty years, the women of India have acquired numerous rights, social and legal no less than political. Their political enfranchisement has been achieved with considerable ease.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed

by a Brahman, by the idea of the sacred mystery of womanhood implied by the *purdah*, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in

the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seats in the Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the

franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above mentioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which, since its inception, women have voted and been delegates and speakers, and which, this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of, the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Reviewing the position about ten years later the Simon Commission showed the extremely limited extent to which women, enfranchised in the manner set out above, had become qualified as electors. Except in Burma, where it was comparatively high, the percentage of women electors to adult female population was less than one. In Madras it was one, in Bombay .8, in Bengal .3, in the United Provinces .4, in Bihar and Orissa .5 and in Assam .2—in Burma it was 4.6 per cent.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act, women became enfranchised. Other provinces followed suit, and at the time of the inquiry by the Simon Commission seven out of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers, first by nomination and then by election. And they justified the confidence placed in them by sponsoring and successfully carrying through many measures of uplift and reform in regard to the status and influence of women. They had so much proved their worth that the Simon Commission remark in their report: "The women's movement in India holds the key of progress, and the results it may achieve are incalculably great. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated citizens."

Based their conclusion on these observations, the Simon Commission wished to bring about a substantial increase in the existing ratio of women to men voters. In exercising the option allowed to them of enfranchising women "on the same terms as men", the provincial legislatures did indeed make a significant gesture; but so long as the qualification to vote was almost entirely based on property, it remained a gesture, because India's women do not own property in their own right.

The Simon Commission affirmed that a further step in developing women's suffrage in India should be taken immediately and added: "It may perhaps be found possible to add to the present qualifications two others, namely, (i) being the wife, over 25 years of age, of a man who has a property qualification to vote and (ii) being a widow over that age, whose husband at the time of his death was so qualified. In addition, the educational qualifications should apply to women over 21 as well as to men." The Simon Commission maintained that women's suffrage should be a cardinal point of the "franchise system" and suggested "qualifications for the vote which will not confine it to the few women who have property qualifications."

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights *vis-à-vis* man embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They have marched from reform to reform, and their outlook is for ever widening. The Gandhi

movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political struggle from which they emerged fully conscious of their political rights and responsibilities. The part played by the two representatives of Indian womanhood at the India Round Table Conferences held in London brought them in the time-light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 6 seats out of a total of 150 reserved for British India in the Federal Council of State and 9 out of a total of 250 so reserved in the Federal Assembly. In the Provincial Assembly, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjab, 4 in Bihar, 3 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in respect of some provinces. By means of such enfranchisement, it is estimated, more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the upper House in provinces where bicameral legislatures have been set up.

Indian women have hailed this as a welcome improvement in their political status and the elections that were held early in 1937 to the various Provincial Legislatures showed that they were alive to their responsibility under the new Franchise. Women were very much in evidence at the polls, even in purdah-ridden provinces.

Such is the advance made in recent years and such is the widespread recognition of women's claims that women candidates have successfully contested general seats in ten cases, one in Madras, one in Bombay and eight in the United Provinces. The significance of these successes lies in the fact that the women defeated men in constituencies in which men voters predominate.

Both evidence and result of the awakening among Indian women are to be found in more than one legislative measure sponsored in the past year or two by women legislators calculated to confer greater rights and freedom on women.

The following table shows the percentage of women voters who exercised their franchise in the first general elections held under the 1935 constitution.

Provinces.	No. Enrolled.	Number who voted.	Per cent.
LOWER HOUSE.			
Madras	1,523,248	479,278	31.5
Bombay	305,750	129,535	42.4
Bengal	896,583	46,758	5.2
United Provinces	494,752	95,553	19.3
Punjab	178,459	58,216	33.56
Bihar	215,490	17,037	7.9
Central Provinces and Berar	259,750	63,744	24.5
Assam	29,680	8,678	29.23
North-West Frontier Province	4,895	3,498	71.4
Orissa	70,526	4,670	6.62
Sind	27,940	9,705	34.7
UPPER HOUSE.			
Madras	2,378	1,420	55.1
Bombay	1,636	923	56.4
Bengal	2,136	437	20.5
United Provinces	1,684	593	35.5
Bihar	882	594	67.34
Assam	559	512	91.57

In many cases the percentages given above does not compare unfavourably with those of men voters. The voting for the Lower House in the Frontier and that for the Upper House in Assam are flattering to the women and shows what organisation can achieve.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights.

All-India Women's Conference.

In recent years Indian women's rights, grievances and demands have been voiced principally by the All-India Women's Conference. The last session of this body was held in January 1940 at Allahabad. Begum Hamid Ali who presided said, "We have suffered from many Hitlers in the home in each generation. Let us pray devoutly that Hitlerism in every shape or form may be banished from the world for ever. I would remind our brothers that they cannot and will not gain *swaraj* until they have set their homes in order and given one-half of the population of India its due share of rights and privileges."

Referring to India's attitude to the War she said, "India has asked a pertinent question and has thrown out a challenge as we all know. All honest-minded citizens of every country of the world, not barring Great Britain, acknowledge the right of India to demand that clear and unquestionable declaration should be made of the principle for which this war is fought and the policy that will be pursued in future by the Powers who are now fighting against Nazism. If, in truth, the war is waged for upholding democracy, is a guarantee to be given to each country and its peoples of self-government and

self-determination, a guarantee that never will they be exposed to such ruthless ravishing as Abyssinia, Albania, Czecho-Slovakia, Austria, Poland and Finland on one side of the hemisphere and China on the other have experienced in this decade? Are all countries to get equal treatment or will Europe still pretend to dictate as superior in morality, culture and civilization? How this hollow boast of superior civilization has been exploded in the last war, and again in the four months of this war, every Asiatic and African country knows only too well. Such boastfulness and empty words arouse unspeakable contempt and despair. The outcome of India's admirable frankness is that the little experiment of restricted self-government has come to an end. What follows is still on the knees of the gods."

On the question of women's place in society and in national life Begum Hamid Ali said, "Justice is not to be expected when one eye is fixed on the pocket of the men who will have to divide their double share of everything in life and, in future be content with one-half of all the land and money and exercise of power that they now inherit in double measure. For this is really what it comes to, and this, human nature being what it is, is the main reason why men are unwilling to consider the question of women's rights. Every daughter and wife should get her due share in an honest community, and, judged by modern standards, the son's share would be half of what it is at present. Every woman will be a free agent to earn her living, to live her own life—in short, to be mistress of her own destiny. She will, if she likes, be free to decline her mistress-ship of the kitchen. She will bear children or not bear children. She will also be a guardian on equal rights with the father of the children she bears. It is monstrous, it is indecent, that such obvious human rights and privileges are still denied to our women."

The School of Oriental and African Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London (now School of Oriental and African Studies), to give instruction in the Language and African peoples, Ancient and Modern, in the Literature, History, Religions and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School is temporarily evacuated to Christ's College, Cambridge. The School's new building is in course of erection on the Bloomsbury Site of the University of London.

The School provides teaching in many subjects. The work is carried out in six

departments as follows: (i) India, Burma and Ceylon, (ii) The Far East, (iii) The Near and Middle East, (iv) Africa, (v) Phonetics and Linguistics, (vi) Oriental History and Law. In a considerable proportion of the spoken instruction is given by teachers from the countries where the languages as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. The Department of Phonetics is equipped with electrical recording apparatus, and gramophone records are made of all the languages taught at the School. These are accompanied with phonetic transcriptions.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of public lectures to be given by distinguished orientalists not on the staff.

7. University Professor of Phonetics and Appointed Teacher.
8. Parsee Community's Lectureship in Iranian Studies.
9. University Professor of Chinese and Appointed Teacher.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant,

suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatnam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1930-31, the fisher-population on the West coast totalled 138,294. The esteemed table fish of the coast consist of the Seer (*Cybinus* or *Scomberomorus*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), *Silago*, *Chupea*, *M...*

importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*) Mackerel (*Scomber*), Catfish (*Iruus*), Ribbon fish (*Trichiurus*), Goggles (*Caranx crumenophthalmus*) and Silver-bellies (*Leiognathus* and *Caza*) take precedence of the former. Sardine and Mackerel overshadow all others. A master fisherman of experience was recruited from Scotland in 1936. He found it impossible to stand the climate of India and had to be repatriated in 1937. Since then efforts to revive deep sea fishing research begun by the Hawley 'Lady Goschen' have been made. Proposals to charter a motor boat smaller than a trawler but capable of employing all known methods of sea fishing for bottom, mid-water and surface

fish in order to test the suitability of those methods for Indian conditions, have reached an advanced stage. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratmagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres the material is largely cured for export.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improvement of fisheries and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir P. A. Nicholson, who from 1905 to 1918, had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future possibilities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.R.S., as Director and is now controlled by his successor Diwan Bahadur Dr. B. Sundara Raj, M.A., Ph.D. The activities of the Department have greatly expanded since its inception.

They are so varied and far-reaching that it is difficult even to enumerate them in the space available much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. The most noteworthy result of technological research conducted

by the department is the production of sardine oil with vitamin A potency equal to one-fourth that of Cod liver oil and the discovery of five other Indian Sea fish which yield oils with a high vitamin A content. Oil from a South Indian shark liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal cod liver oil.

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Laboratory Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present there are 105 fish curing yards scattered along the coast. During the year 1938-39, 1,016,465 maunds of fresh fish were brought to these yards for curing and 163,818 maunds of salt were issued for the purpose. The transactions in these yards resulted in a surplus revenue over expenditure of Rs. 2,636.

Pearl and Chank Fisheries.—While there is no prospect of a pearl fishery for some years to come, owing to the absence of spat fall in the banks, a distinct revival in the chank trade was evidenced in the keen competition for the purchase of the last two seasons' chanks. A total of 363,960 chanks were fished during the year 1938-39, which will fetch a gross revenue of Rs. 87,350. The rearing of Pearl oysters in captivity with the implied possibility of the production of cultural pearls near Krishnadai Island, Pamban, started in 1933 has been successful and there are now six years' old oysters living in the farm. The discovery of a larger bed of pearl oyster-lings in 1938-39 enabled the expansion of the pearl farm at Krishnadai Island from a laboratory scale, with a few hundred oysters, to a small experimental farm on the Japanese model. This will enable the department to investigate the possibilities of pearl farming and the production of cultural pearls. Another experiment in marking of chanks started in 1931 to study the rate of growth, mortality and migration of the chank in its natural haunt, is continuing and so far 3216 chanks have been marked and liberated.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up

in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Mirror carp fingerlings have been introduced in a pond in the Nilgiris, from Nuwara Eliya, Ceylon. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 5 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and Etroplus suratensis which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. The Department has been endeavouring to establish Catla, the quick growing carp of great economic importance, into the Cauvery system since 1922, and direct proof of the success of the efforts of the department has been obtained by the capture of hundreds of young catla at almost all the anicuts and sluices in the Tanjore District. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvæ of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st, October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public. The present building, which is antiquated in design, has sunk several feet below the general

level of the beach, and during rains the floor is flooded with water causing loss of income to the Aquarium and damage to the walls. It is therefore proposed to build a new and up-to-date building for the Aquarium, with modern fittings and up-to-date equipment. A total of 1,12,170 persons visited the Aquarium during 1938-39 and the receipts amounted to Rs. 10,895 against an expenditure of Rs. 6,437-1-3.

Deep Sea Fishing and Research.—The annual report of the Public Health Commissioner with the Government of India for 1939 states that the total land area is 1,12,170 acres, of which only 2.44 acre per head is available for food-crop, quite insufficient for even the present population, and that the population is increasing at an alarming rate and by 1941 will probably reach 400 millions. The findings of the census of 1931 is that agriculture is the main source of maximum production under. Fisheries therefore are the only prime source of food-supply to supplement agriculture, and the Department has been endeavouring to play its true and proper part in improving the catches and methods of sea-going fishermen to augment the fish supply of the Presidency.

The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms; and,
- (2) how to exploit these deep-sea fisheries economically.

The survey of deep-sea fisheries by the trawler 'Lady Goschen' was abruptly terminated in 1931-32, as a measure of retrenchment. Brief though the survey was it disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatam reported by the trawler was of sufficient importance to warrant a further survey.

In the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department. The Yorkshire Motor Coble was decided on as the most suitable modern fishing boat to supplant the local catamaran and canoe on a surf beaten harbourless coast, and one was acquired in 1930-31. In the years of depression however the financial stringency of Government precluded experiments and demonstration with the Coble. Further experiments are being planned.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds, which number over 106,050 in

the Presidency. The work though begun in July 1930 lasted only for 13 months and had to be abruptly stopped as a measure of retrenchment.

It was, however, possible to complete during this short period a survey of ponds in 98 villages. 2,172 wells and 264 ponds in these villages were examined. Though it has not been possible to give satisfactory help to the numerous enquirers for want of staff and funds, advice on matters regarding rearing of fish in ponds and wells is being given as far as possible. For a complete knowledge of the various life history, breeding habits, feeding habits, and the physical and chemical characters of the water suited for each, their enemies and diseases, etc., a scheme for a fresh water biological station was drawn up and sanctioned by the Imperial Council for Agricultural Research in 1934, and is still allotment of funds.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1938-39 on the west coast was 51.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of the Fisheries Department should be trained to act as inspectors of co-operative societies. The Government partially accepted the recommendations and sanctioned the deputation of 2 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery station at Tanur. They are given practical instructions in fishing, a boat having been purchased for the purpose. But as a measure of economy the training Institute was closed in July 1937. In some places the villagers themselves started the schools and then handed them over to the Department. In other places schools were opened by the Department at the request of the fishermen. A comprehensive scheme for the establishment of a Fisheries Technological Institution has been drawn up and submitted to Government.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacca Divisions. 490,865 persons in Bengal subsist by fishing with 272,579 maintained by the sale of fish. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea ulsha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Calla calla*), mrigal (*Carrhina mrigula*); prawns and shrimps abound everywhere. Of important fisheries taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bektli or betki (*Lates calcarifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the Mangrove-fish or Thread-fin or Indian Salmon (*Polynemus*) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With the demand for fish in Calcutta a rise in prices, the prospect of steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organise and without a rare combination of

technical fishery knowledge and far-sighted and comprehensive organisation the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1923 after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without much difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilisation of fish by-products. Fresh water Fisheries, however, are vast and very important and these require to be developed scientifically. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

During a lapse of 14 years after the closure of the Fisheries Department, the price of fish in Calcutta has been soaring high consequent on the rapidly increasing demand and the unhealthy monopoly exercised by the small group of vested interests. The economic condition of the actual fishermen was gradually becoming worse due to exploitation by the capitalists and the fisheries in general were getting depleted due to various causes at work. With the increase of distress the public naturally have been clamouring for the re-establishment of the Fisheries Department to protect the fisheries interests and to organise and develop the fishing industry on modern lines and to improve the general economic condition of the fisherfolk. The Bengal Government therefore decided to appoint a Fisheries Expert to survey the existing condition of the Fishing Industry in the Province and to suggest schemes of development with a view to augment the fish food supply, to examine the ways and means of bringing about a reduction in the ruling prices of fish, and to stimulate commercial speedier transport, better marketing the establishment of Cold Stores for fish by-products.

The services of Dr. M. Ramaswami Naidu from the Madras Fisheries Department who has had vast experience in fishery industry both in India

and Europe, were requisitioned by the Bengal Government for appointment here as the Fisheries Expert. He surveyed the industry and submitted a report to Government which is under consideration and it is hoped that as a result of it the former Fisheries Department would be revived and the Fishing Industry placed on a more efficient, well organised and sound basis.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries, particularly those connected with the utilization of by-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a chance is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palt, tambasa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr. Sorley's more important recommendations are:—

1. The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.
2. The establishment of a bureau of fisheries information.
3. The advisability of the transfer of the fish curing yards to the control of the Local Government; and
4. The encouragement by the Bombay University of marine biological research.

Mr. Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started.—A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay, at Danda, and was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R. I. M.) and suitable alterations to it were to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been possible aroused the interest of the fishermen,

who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fisheries.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen at Danda. That the progress of this experiment has been encouraging is evident from the fact that every year since then has seen an addition to the number of vessels. The following four vessels were built by Government:—

(1) The "Lady Sykes", (2) the "Sir Frederick Sykes", (3) the "Lady Brabourne" and (4) the "Lord Brabourne".

The last mentioned vessel was built at the Royal Indian Naval Dockyard and is a great improvement on her predecessors, both in point of design and engine equipment. The special feature of this vessel is its insulated fish hold and its comparatively large carrying capacity.

The launches have been operating between Bombay and the Kanara coast. The success which attended their working encouraged private individuals to invest in similar vessels to transport fish. The number of privately owned launches at present is nine. They transported during the fishing season of 1938-39 a total of 1 729,162 lbs. of fish.

Growth of Refrigerating Facilities—Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malwan on the Ratnagiri coast, and Chendia on the Karwar coast. In Bombay, quick freezing plant employing the Z-process has been installed by a Russian technician at the Kerman market at DeLisle Road and an ice factory and a cold storage plant have been constructed on the east side of the Crawford market (Bombay). A feature of the last plant is that it has a number of small chambers which are lined out at small fees either to one individual or to several collectively. This plant also provides for the quick freezing of fish.

During the current year an ice factory and a quick freezing and storage plant were set up at Sassoon Dock (Bombay), where all the launches, both Government and private land their catches. This factory and cold storage plant have met a longfelt want and proved an undoubted boon both to fishermen and owners of launches and sailing craft. It has obviated the need of obtaining ice from remote centres in the city thus saving a good deal of time and expenditure. The existence of the cold storage plant at the Dock is a welcome facility to the fishermen, who are now able to store catches at any hour of the day or night when retail vendors are not on the spot.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object of enabling them to take charge of their own launches whenever they decide to go in for these on an extensive scale. The

benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly, a fisheries information bureau has also been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not available to them before.

The more important sea-fish are pomfrets, sole and sea-perches, among which are included the valuable Jew-fishes (*Sciaenidae* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassien and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

Inland Fisheries.—Government at the beginning of 1936 approved of a scheme for the development of inland fisheries in the Presidency. A start in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Bandra Municipality for the purposes of the experiment.

The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs. 10,000 for inland fisheries work.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soomral, shark, rays and jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds

for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay City itself, will come as a surprise to many. The fisheries of Bombay City seafare on its south-western and north-eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south-western site in Bombay City where pearl fisheries have been recently discovered is situated in blocks Nos. 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but the pearls, apart from being limited in number, are of indifferent quality.

The revenue derived from the various pearl fisheries is meagre. They are not leased out

regularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster. They are confined to certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

There are two pearl fisheries in the Gulf of Cutch, one for the true pearl oyster the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Nawabagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which, in 1905, obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territories in Kathiawar.

Burma.

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Straits Settlements) was 11.28 lakhs in 1938-39. The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue.—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 30.12 lakhs *per annum* during the last decennium) and therefore they are one of the most important sources of national wealth. The demand declined to eighty-eight lakhs in 1938-39 owing to the depression.

Some open sea fisheries are also small rivers are classed as leaseable fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,398 of which 1,663 lie in the Irrawaddy Division, and 649 in Maubin—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north-east and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearl industry carried on, but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, (3) Kabalu. These are generally *ngakhu*, *ngayan* and *ngayyi*. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally *Ngathalaik*, *Ngayyin* and *Ngamuyin*. *Kaka laung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market.

The Punjab.

District work activities consist mainly in patrolling rivers and streams, catching and prosecuting poachers and issuing fishing licenses. The number of fishing licenses issued during the year 1938-39 was 7,283 against 7,070 in the last year.

The year 1938-39 was favourable from a fishing point of view. The catches of fishermen were satisfactory on the whole, except in Gindapur, Ferozepur, Gujrat and Jhelum districts where the decrease of fish is reported to be due

to lack of timely rains. The Ghaggar stream in the Hissar District dried up completely and no fish were left therein. The fishermen consequently migrated to the Jumna river. There was no extraordinary mortality among fish in any river or stream in the Punjab. The largest fish caught with rod and line was a Mahseer of 47 lbs. in weight on the Beas river in the Kangra District.

171 Angling Licenses for trout fishing in Kulu were issued against 202 in the last year. The

decrease is due to the fact that leave of several military officers was withheld. The catches of anglers were on the whole satisfactory. The biggest trout fish caught with rod and line in the Beas Angling Reserve was 5 lbs. 12 oz. and the biggest brown trout netted in the Beas was 8 lbs.

The Brown Trout Ova planted in the past in the Baspa River has proved a great success and quite a number of Brown Trout are seen between the spring where the Ovas were originally planted, and the Ratnang fall and a little above the spring. More than a dozen fish were caught by a Forest Officer in September, 1938. In the same month the same officer also caught a dozen trout from the Pabar stream with an average of 1½ to 2 lbs. The biggest fish caught by him was 3½ lbs. In October 1938, another Forest Officer caught 3 fish and the biggest amongst these was 5½ lbs.

Research. A comparison of the fertility of Ova from wild and domesticated trout was continued during the year. The mortality amongst Ova from domesticated fish was 32 per cent and infertility 13 per cent. In the case of wild fish the figures were 41 per cent. and 22 per cent. respectively.

The Hatcheries at Mahili (Kulu) produced 81,109 fertile Ova of Brown Trout. Out of this

60,000 Ova were planted in various streams in the Kulu Valley and the remainder were hatched out at the Hatcheries and the fry thereof planted in the River Beas and its tributaries in the Kulu Valley.

Planting of Rainbow Trout in the River Beas in the Kulu and Kangra has been discontinued as these fish did not show as satisfactory a growth as Brown Trout.

Investigation on the food of Carp carried on at Lyallpur and Chhenawan showed that the fish hardly eat anything from November to the end of February, but they become voracious feeders from March to October. Fry of Rohu up to the age of 9 months, kept in aquaria, were found to be voracious feeders on crustacea and mosquito larvæ. This discovery of insectivorous habits of the carp fry will prove of material practical utility in stocking village tanks with them.

Work continued on the survey of trout waters, carp farming and the introduction of exotic species in the waters of the province.

Larvicidal fish have been spawned successfully at Lyallpur and Chhenawan and have been supplied free of cost to Indian Military Hospitals and District Medical Officers. The fish are available in millions.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of one officer trained in Madras and another officer trained in Japan and America the Department has already accomplished a notable amount of development work and a scheme for further development is being worked out. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been

done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. A cold storage plant has been erected in Trivandrum for freezing and preserving fish. Work regarding the popularisation of frozen fish is being undertaken. Special Schools have been opened for the education of fisher lads. Certain rules have also been passed by Government recently for the grant of loans for the encouragement of fish industries in the State.

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material

modifications of them in their applications, translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, i.e., written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 3 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced."

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but, whether or not our early administrators realised the importance of the forests to the economic and physical welfare of the whole country, the fact remains that little or nothing was done to check uncontrolled destruction with its inevitable results in erosion and sterilsation of the fertility of the land. The years between 1830 and 1857 witnessed the first beginnings of forest conservancy in Southern India. During the preceding twenty years farsighted individuals had repeatedly urged, both in Madras and Bombay, that scientific advice in the management of the forests had become an urgent necessity. In 1847 the Bombay Government appointed Dr. Gibson as Conservator of Forests for the Presidency. Madras did not follow this example until nine years later, when Dr. Cleghorn was appointed Conservator of Forests in 1856. It was a Memorandum of the Government of India issued in 1855, arising as it chanced out of the annexation of the Province of Pegu in Burma which first laid down the outline of a permanent policy for forest conservancy in India. Progress was delayed for a time by the disturbed state of the country, but from 1860 onwards forest organisation was rapidly extended, though the earlier years of forest administration were full of difficulties. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of organised management, were long and laborious tasks, which are even yet not completed. Nevertheless, large tracts of forest were saved from ruin and were gradually brought under increasingly efficient management. It was in 1862 that the Governor-General in Council submitted to the Secretary of State detailed proposals for the administration of forests as a public estate for the welfare of the country as a whole. "The idea that forest is a thing valuable in itself and, in truth, just as essential to the community as fields of wheat, sugar, or cotton, took a long time to spring up, and, in fact, is not even now generally realised in that complete manner that is essential before forest management can be said to stand on a proper basis." With the appointment of Brandis (later Sir Dietrich Brandis) as the first Inspector-General of Forests in 1863 commenced the scientific management of India's forest estate. Whatever may have been the opinions held in the past in some quarters regarding restrictions imposed by forest policy, there can now no longer be any doubt regarding the very substantial benefits which have accrued to the country through the formation of an extensive forest estate and that in her forests India now possesses a property of great value, the future importance of which it is hardly possible to over-estimate.

Types of Forest.—More than one tenth of the total area of British India is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at

settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated, while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India on 31st March, 1939, was 94,457 square miles or 11.1 of the total area. This was classed as follows: Reserved 71332; Protected 6732; Unclassed State 16593.

Throughout this vast forest area, scattered over the length and breadth of India, from the Himalayan snows to Cape Comorin, and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of India including the Indo-Gangetic plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and in the north alpine zones must be distinguished, each supporting its own forest types. Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical, temperate and alpine, there can be distinguished wet, moist and dry forest types. In addition, various elaphic and seral types occur, dependent on local conditions such as littoral (beach), tidal, fresh-water swamp and riverain forests.

The following is a brief description of the main forest types:—

1.—TROPICAL FORESTS.

1. Tropical Wet Evergreen Forests.—These are dense forests with a large number of tree species all mixed together, but according to their heights forming several canopies or layers. The upper canopy trees, among which *Dipterocarps* are usually characteristic, are often 150 to 200 feet high, and they very often have clear stems of 100 feet before the first branch is reached. These forests are found in the areas with the heaviest rainfall. In the southern or Peninsular region, they occur along the Western Ghats from a little south of Bombay to Tanjore, i.e., in the western parts of Bombay, Madras, Coorg, Mysore, Cochin and Travancore. In the northern or Indo-Gangetic region the type is to be found in the wetter parts of Bengal (the submontane and Chittagong areas), extending into the damper parts of the coastal strip of Orissa, and intermingled with the next two types over almost the whole of Assam. The type also occurs extensively in North Burma and the Andamans.

2. Tropical Semi-Evergreen Forests.—These form an intermediate type between the wet and the moist types. They are very extensive in Burma, and are fairly widely distrib-

lated in the Northern region of India, occurring all over Upper Assam and in North and South Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the south, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species such as the *Terminalias*, and the general height is somewhat less than in the wet evergreen forests.

3 Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Terminalias* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through Bengal and Assam, Bihar and Orissa, and the United Provinces up to the eastern border of the Punjab.

4 Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic plain, from Orissa, through Bihar and the United Provinces to the Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is mostly mixed, with *Sal* occurring only locally.

5 Tropical Thorn Forest.—The dry tract throughout the Peninsula, to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas at actual desert), from the North-West Frontier Province, through the Punjab and Rajputana, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6 Tropical Dry Evergreen Forest.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, but is largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops* *bergandra* and *Mernecylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS.

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 5,500 feet, has a dense evergreen forest of medium height (60 feet) in which *Eugenia* is a characteristic genus, with *Lauracea* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Terminalia*, *Eugenia* and *Melastoma* are typical genera.

III.—NORTHERN SUBTROPICAL FORESTS.

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Pines* are typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2. Subtropical Moist Hill Forests.—These extend the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Bhutan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chid* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees mix with or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur and Upper Burma hills, but instead of the *Chir* the dominant tree is the *Khasi pine* (*Pinus khasia*). This again is replaced by *Pinus merkusa* on the hills in the South Shan States and parts of Lower Burma.

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olive* (*Olea cuspidata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kala Chitta hills in Punjab, Kasluir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS.

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through Bengal into the higher hills of Assam and Burma, from about 6,000 feet

to 9,500 feet. They are typically fairly dense evergreen forests, in which several species of *Oaks* and *Chestnuts* predominate, but many other species are also present, including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2. Moist Temperate Forests.—Along the whole length of the Himalayas from the North West Frontier Province, through Kashmir, Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees are *Spruce*, *Silver Fir*, *Cedar* (*Deodar*), *Blue Pine* (*Pinus excelsa*), and *Tsuga*. *Cypress* and *Yew* also occur to a less extent. Often these trees are mixed together, but pure crops of one or the other are almost more frequent, depending on the altitude, aspect and other conditions. Evergreen *Oaks* are also often present, particularly on southern aspects, while in the damper situations are often many broad leaved trees, also typical of European forests, such as *Maples*, *Hornbeam*, *Horse Chestnut*, *Birch*, *Elm*, etc.

3. Dry Temperate Forests.—In the inner ranges of the Himalayas, where the South-West monsoon is feeble, and the rainfall is usually less than 40 inches a year, and that is mostly in the form of winter snow, is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers *Cedar* (*Deodar*), *Pinus gerardiana* and *Juniper* (*J. macrocarpa*), with some *Silver Fir* and *Blue Pine* at higher elevations. Broad leaved trees, such as *Maple*, *Ash* and the *Holm Oak*, occur scattered or in pure patches, while the *Gliricidia* spreads up from the dry sub-tropical zone. The type occurs in Hazara, Kashmir, Chamba, Inner Garhwal and Sikkim. Among the herbs and shrubs present are many medicinal plants, such as *Artemisia* and *Ephedra*.

V.—ALPINE FORESTS.

The uppermost forests of the Himalayas, from about 9,500 to 12,000 feet, consist of a dense growth of small trees and large shrubs chiefly *Birch*, *Rhododendron* and dwarf *Juniper* with patches of coniferous overwood of high level *Silver Fir*, and *Blue Pine*.

This gives place to an alpine scrub above, consisting of dwarf *Rhododendrons*, *Junipers* and other shrubs, interspersed with patches of grassland, which form excellent grazing areas in summer, when they are covered with a great variety of beautiful alpine flowers.

VI.—SPECIAL FOREST TYPES.

Among various special edaphic and seral forest types, the following may be mentioned:—

1. Beach Forests.—All round the coast, wherever a fair width of sandy beach occurs, there is a fringe of forest in which *Casuarina*, originally introduced from Australia, is now often the most characteristic species. Elsewhere small evergreen and deciduous trees form a low but fairly dense fringe along the shore.

2. Tidal Forests.—In the Sunderbans of the Ganges-Brahmaputra delta, and along the mouths of other large rivers, such as the Mahanadi, Godavari and Indus, are to be found *Mun-*

grove (*Rhizophora*, *Brougniera*, etc.) and *Sundri* (*Heritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. Fresh-water Swamp Forests.—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river beds in parts of Assam, Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4. Riverain Forests.—Along all the larger rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstrœmia floricarpa*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in North and South India, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Azadirachta indica*), *Sissoo* (*Dalbergia sissoo*) and *Tamaris* forests found throughout Northern India from Assam to Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS.

No account of the forests of India would be complete without a reference to the *Bamboos*, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi-evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forest and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos, which are not at present economically exploitable and which often greatly hinder other forest operations.

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely:—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timber for commercial purposes, such, for example, as the teak forests of Central and Southern India, the sal forests of Northern, Central and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(c) Minor Forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(d) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India recommended that they be transferred in other provinces unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Burma was separated from India and Forests were included in the schedule of Provincial subjects throughout India.

Territorial Charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; usually provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into sub-divisions. The Ranges are further subdivided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards.

Non-Territorial Charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans.

The Forest Service.—The Forest Service comprises four branches—

(1) The Indian Forest Service. This still contains 219 officers. Of these 163 were recruited direct to the service. Recruitment to this service ceased in 1932.

(2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The present number of officers

in the Indian Forest Engineering Service is only 2, one in the Punjab and the other in Bombay.

(3) The Provincial Forest Service.—Till 1928, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forest Service was started at Dehra Dun, in 1926, the training of the Provincial Forest Service officers was stopped in 1928.

With the advent of Provincial autonomy in 1935 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course.

(4) The Subordinate Forest Service.—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards.

With the closing down of the Colaba College in 1939, the training of Forest Rangers is now concentrated at the Indian Forest Rangers College at Dehra Dun for the whole of India, except Bombay, the latter province making its own arrangements.

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes.

Forest Education.—Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. The school owed its origin to a memorandum submitted in September, 1877, by Sir Dietrich Brandis, the first Inspector-General of Forests to the Government of India, in which he urged the desirability of creating a national Forest School in India, with the object of preparing students for the executive charge of a range, and of enabling Forest Rangers to qualify for promotion to the superior staff. Forestry, he said, must cease to be a subject of foreign introduction; it must become naturalised before it could be regarded as established on a safe and permanent basis.

The hopes of Sir Dietrich have today been more than realised, for not only is the executive charge of ranges and even divisions now being held by ranger students of Dehra Dun or of the daughter college at Coimbatore, but with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forest Services of the various Provinces and States of India.

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College has now been closed, however, with effect from the 1st July 1939, and Ranger

students from all parts of India are again being trained at Dehra Dun. This College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

In 1912 a separate course was started for the Provincial Forest Services as then constituted. This course was closed in 1928 with the cessation of direct recruitment to the old Provincial Forest Services. From 1st November, 1926, the training of Indian probationers for the Indian Forest Service was commenced, a separate Indian Forest Service College being established in the old Forest Research Institute at Chandbagh, Dehra Dun. This College, however, had to be closed in November, 1932, owing to the cessation of recruitment to the Indian Forest Service.

Following the transfer of "Forests" to popular control, under the reformed constitution, the old Indian Forest Service is slowly disappearing, and in its place each province is building up its own Superior Forest Service. For the training of officers for these new Provincial Forest Services, and for the corresponding Forest Services of the Indian States, the *Indian Forest College* was established at New Forest in conjunction with the Forest Research Institute and was opened in May, 1938.

The Indian Forest College.—The Indian Forest College is housed in the Forest Research Institute building at New Forest and is well equipped with lecture and common rooms, and biological and chemical laboratories. The museums, herbarium laboratories and workshops and the Central Library of the Forest Research Institute form an important part of the College, in so far as they are largely used for educational purposes by the Research Officers and College Staff. Hostel accommodation is provided in Class II Officers' bungalows and there is a common mess. A large playing field with a pavillion provides football and hockey grounds, a cricket pitch and tennis courts.

The staff of the College consists nominally of two—the Principal and Professor of Forestry, and the Lecturer in Engineering and Surveying, under the general administrative control of the President, Forest Research Institute and College. But in addition the Research Officers of all the branches of the Forest Research Institute act as lecturers in their respective subjects.

The course covers two years, and among other conditions an honours degree is required as a qualification for entry. The fees are Rs. 3,500 per year, and the total cost, including stipend for living expenses, cost of camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 10,500 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

The Indian Forest Ranger College.—The Indian Forest Ranger College (formerly known as the Forest School, and then as the Imperial Forest College) is housed in the original College buildings at Dehra Dun. These comprise a college building, with lecture and common rooms, drawing and engineering halls,

biological laboratory and museum, and hostels for the students. The surrounding grounds covering about 4 acres, constitute a small arboretum and include tennis courts, while there is a good playing field adjacent.

The staff of the College consists at present of the Director and the Assistant Instructor. Certain of the Research Officers of the Forest Research Institute also lecture in their special subjects.

The course covers two years. Among other conditions, the minimum qualification for admission to the College is a Matriculation certificate of an Indian University or its equivalent, but the usual standard is higher. The fees are Rs. 1,500 per year, and the total cost, including stipend for living expenses, camp outfit and equipment and travelling expenses for field training and tours comes to about Rs. 4,850 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

Research.—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of Forest Research in 1906 when at the instance of Sir Samthall Kilday-Wilmon then Inspector-General of Forests, a staff was appointed to investigate problems connected both with the growing of forests and with the utilisation of forest produce.

In 1914 the first Forest Research Institute was opened on the Chandbagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kamlauli (New Forest) estate a few miles out of Dehra Dun, and it was opened on the 7th November, 1929. The old Institute was converted into the Indian Forest Service College, but with the closing of that college in 1932, the whole of the Chandbagh estate was given up, and with many additions and modifications now forms the Doon School.

The Forest Research Institute is under the administrative control of the Inspector-General of Forests, who is also the President. There are five main branches of forest research namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry. Silviculture, which deals with all the production side of forestry is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work, does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India and Burma. The Botanical branch is chiefly concerned with the identification of species, but has a mycological section dealing with fungus diseases of trees and wood rotting fungi. The Utilisation branch has sections dealing respectively with timber testing, wood working, wood preservation, timber seasoning, paper making, wood technology and minor forest products. The sections are under the charge of specially trained Indian assistants,

and are equipped with up-to-date workshops, testing machines, saw-summer kilns, antiseptic treatment plant, sawmill and a paper-making plant sufficiently large to enable paper-making tests to be carried out on a commercial scale. The Forest Entomologist is primarily concerned with research into the control of insect attacks in tree crops, and insect damage to timber. There is also a section dealing with the taxonomy of Indian insects under the systematic Entomologist. The Chemist does research work into drugs, oils and other minor forest products, and there is also a Soil Chemist who is engaged on silvicultural problems.

The Forest Research Institute is thus organised and equipped to deal with every aspect of Forest Research and the work it has done in the past and is doing has gone a long way towards improving the productivity of the forests of India, and had led to the fuller and better utilisation of their products, with correspondingly increased financial returns. Limited facilities also exist at the Forest Research Institute for training in research methods and for the conduct of research by private individuals.

Forests Products.—Forest produce is divided into two main heads: (1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual output of timber and fuel from all sources averages about 290 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilizing modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light railways, the trains of trucks being drawn by elephants which have been superintended from orchidery work and it has been found possible in this way to work large, hitherto inaccessible areas of forest very cheaply. Elsewhere in India a great part

of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carvers, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the late world wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs. 290 lakhs a year, surplus revenue amounting to upwards of 25 per cent of gross revenue. Most of the provinces ordinarily show a steady increase of surplus.

Agencies.—The general practice of the Forest Department in the Government of India and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun U. P.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the new company now known as Cables and Wireless Ltd. The Indian Radio Telegraph Company has taken over the working of the cables at Bombay and Madras, and is now known as the Indian Radio and Cable Communications Company Ltd. The same Company also works a direct wireless service between Bombay and Tokio, which was opened in 1933.

The inland wireless stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. The wireless installations at Karachi and Calcutta have been modified so as to meet all the wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes have been erected at many places for the purpose of providing constant communication with aircraft in flight, the most up-to-date system having been installed.

The Indian coast stations have been maintained in a state of high efficiency and many improvements effected. The high-speed continuous-wave wireless stations at Madras Fort and Singaladon (Rangoon) have proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

In December 1936 a radio-telephone service was opened between Madras and Rangoon, by means of which telephonic communication can be obtained between all places in India connected to the trunk telephone system and many places in Burma. This service involved the construction of a large amount of new and up-to-date apparatus both at Madras and at Rangoon.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and total many thousands per annum. Telegrams are also passed by wireless between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea.—A noticeable feature of wireless development during recent years has been the provision of direction-finding apparatus at Bombay, Calcutta and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain knowledge of their whereabouts at a considerable distance from the coast. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with civil aviation has been developed especially for the assistance of aeroplanes along the airmail routes between Karachi and Singapore and between Karachi and Madras.

Radio-Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Radio and Cable Communications Company between India and the United Kingdom and India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, until it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there was a gradual extension of the area covered in India, and every important city in India can be placed in telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner can use the service for an overseas call. Before doing so, however, he has to place a deposit with the Telegraph Authorities.

Liberal allowance is made at the discretion of the observing operator for periods during which speech is unsatisfactory owing to any defect in service, so that the time charged for is the period of effective speech only. (Allowance is made in charging for calls when atmospheric conditions prevent continuous effective conversation).

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, and Madras, and although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After *over several years*, an *company was* granted *broadcasting services* by the *British Broadcasting Corporation*. Broadcast stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

All India Radio.—The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Communications Department. Government for this purpose formed an *Indian State Broadcasting Service*, now called *All India Radio*, and instituted a *Central Broadcasting Advisory Committee*, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the subject.

Government, availing themselves of an improvement in their financial condition, in 1934-35 decided upon a large development of their broadcasting service and allocated sub-

stantial funds for the purpose. A special inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a high-power medium-wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wave length is 340 metres (882 kr/s). The wavelength was somewhat inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of medium-wave for transmissions in India. It was therefore appropriated for the first high power station to be built. The Bombay wavelength has since been changed.

The Government of India decided to appoint a Controller of Broadcasting in India and secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government, in *intending to open a large* *by the installation of modern high-power transmission equipments* in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which followed the arrival of Mr. Fielden led to a revision of these plans, and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of Mr. H. L. Kirke.

A valuable report was presented by this official, a plan for wide extension of broadcasting activities was elaborated. Government engaged Mr. C. W. Gwyder, one of the foremost wireless, and particularly short-wave, engineering experts in the world, to be their principal engineer for construction and research work. Orders for extensive new equipment for implementing plans for expansion prepared by these experts were placed in December 1936. It includes new 10 k.w. short-wave transmitters for Bombay and Calcutta and one 10 k.w. and one 5 k.w. short-wave transmitters for broadcasting and experimental work in Delhi. It also includes a 10 k.w. short-wave transmitter for Madras for service throughout the Madras Presidency, and a 200 watt medium-wave transmitter for Madras City. All this apparatus will be of the most modern type. This will make for economy in working and should give purity of rendering unexcelled in any other country. The short-wave plant is considered of great importance, as it will provide a measure of service for the whole of India. The medium-wave transmitters are intended to give a first-grade service, on inexpensive receivers in the large towns, but, owing to atmospheric conditions in India during the greater part of the year cannot be

expected to provide a first-grade service at distances more than 30 to 50 miles from the special areas for which they are intended

His Excellency the Marquess of Linlithgow, immediately after taking the oath of office as Viceroy in New Delhi on 18th April 1936, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable innovation in procedure is regarded as indicating His Excellency's enthusiasm for broadcasting and to portend that he will show considerable interest in its development

Licences.—Broadcast receiving licences are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, a considerable number have been issued. The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during the past year.

BROADCASTING IN INDIA.

Headquarters of All-India Radio: No 1, Bhagwanadas Road, New Delhi

Telegraphic address "CONBROADCAST"

Broadcasting in India is controlled by All-India Radio, which is a department of the Government of India. The head of this department is the Controller of Broadcasting, who is assisted at headquarters by the Deputy Controller, the Chief Engineer, the Administrative Officer, the Assistant Chief Engineer, the Public Relations Officer and the Director of Programmes Planning.

There are 9 stations and 15 transmitters at present in operation in India. 7 Receiving Centres are also in operation at the present moment at Bombay, Delhi, Calcutta, Madras, Trichy, Dacca, and Peshawar. Two more are under construction.

Each station is under the control of a Station Director, who exercises supervision in respect of the programme, technical (through the Station Engineer) and clerical staff under him. Other heads of offices are (i) The News Editor, All-India Radio, (ii) The Editor, "The Indian Listener," "Awaz" and "Sarang," (iii) The Research Engineer and (iv) The Installation Engineer. The total strength of All-India Radio as on the 1st June, 1940 was as follows—

	Headquarters	Other Offices.
Officers ..	7	252
Staff ..	53	214
Total	60	466

Programmes.—Programmes, both European and Indian, are planned by Station Directors with the assistance of their Directors of Programmes and Programme Assistants. These are drawn up well in advance of their scheduled dates, and are published in the fortnightly journals of All-India Radio.

Twenty-eight News Bulletins a day in English and Indian languages are broadcast for the benefit of listeners at fixed times of the day from stations. All-India Radio has also undertaken schemes of Rural broadcasting for the uplift of villagers at all its stations except Bombay, where the scheme has been suspended, and School Broadcasting at the Delhi, Bombay, Calcutta and Madras stations. Public utility items include broadcast of S.O.S. messages for the tracing of lost persons.

Each station of All-India Radio generally has the following types of studios for the broadcasting of different kinds of programmes—English music, Indian music, Talks, News, Drama, Gramophone records and Feature programmes

Public Relations.—Contact between All-India Radio and its listeners is established through the medium of

- Periodical questionnaires issued from its stations to elicit reactions and tastes of listeners.
- Advisory Committees established at Delhi, Bombay, Calcutta, Madras, Lahore and Lucknow in consultation with the Provincial Governments to keep the Controller in touch with local public opinion in the matter of programme construction and advise him on such matters
- The five Radio Journals of All-India Radio, (i) The Indian Listener (English), Awaz (Urdu), Sarang (Hindi), Betar Jagat (Bengali) and Vanoth (Tamil).
- Correspondence with Listeners from whom both appreciations and criticisms are received.

Growth of Broadcasting.—The working of the Department resulted in a net profit of Rs. 22,99,950 with effect from the year 1930-31 to 1938-39.

Up to the 31st March 1939 Rs. 23,88,067 have been spent out of the total allotment of Rs. 40 Lakhs on capital programme.

The growth of Broadcast Receiver Licences at the end of March of each year beginning with 1933 is given below which will indicate the interest evinced in Radio.

Year	Licences.
1933	9,275
1934	12,037
1935	17,881
1936	28,066
1937	42,152
1938	52,883
1939	72,282
1940	97,537

Licences in force at the end of April 1940 1,03,172

Licences are issued on behalf of the Director General, Posts and Telegraphs, New Delhi, by all head and sub-post Offices, numbering 4,634 all over India.

ALL-INDIA RADIO BROADCASTING SYSTEM.

Indian States are taking up actively the installation of Radio Stations. Hyderabad State has one in operation, while Travancore Mysore and Baroda are expected to have stations in operation in the near future.

Number of Receivers.—While the number of Wireless Receivers in India has increased. the total for All-India of about 100,000 at the end of April 1940 is negligible, when one considers the vast population, about 380,000,000, and when one compares it with the progress in Europe, America or Japan where it has become an indispensable dynamic social institution.

Taking the figures of wireless licensees, there was an increase of 11,000 between January 1933, and July 1935. The number in April 1937 was 43,351, in April 1938, 53,810 and in April 1939, 73,698 and in April 1940, 100,388. At the end of 1938 there were 21,000 license holders in Bombay Presidency, which has the largest number in India.

Radio Imports.—The Imports of wireless apparatus into India has increased rapidly in recent years. Imports have increased in value from Rs. 10 lakhs in 1932-33 to Rs. 35 lakhs in 1936-37. The value for 1937-38 was Rs. 47·7 lakhs, while in 1938-39 was about 41 lakhs. For the ten months 1st April 1939 to 31st January 1940 the value of imports was Rs. 40·5 lakhs, as compared with Rs. 30·02 and Rs. 37·17 for the corresponding ten months of 1938-39 and 1937-1938. Most of the imports are through Bombay.

A feature of the import statistics is the growth of importations from the United Kingdom, which now heads the list of countries supplying

wireless apparatus to India. The United States comes second and the Netherlands third.

During the year 1934-35, imports from the United Kingdom fell by over a lakh from Rs. 5,71,971 to 4,66,316 while those from the United States of America increased by 6½ lakhs from Rs. 1,78,944 to 8,30,348. Imports from the United Kingdom have increased since to Rs. 12,62,625 during 1936-37 being second to the United States of America with exports to India valued at Rs. 16,02,354 during the same year. In 1937-38 Imports from the United Kingdom increased to Rs. 15,54,884 and in 1938-39 to Rs. 16,87,726. Imports from the U. S. A. in 1937-38 amounted to Rs. 15,36,217 and in 1938-39 to Rs. 12,63,017. For the ten months 1st April 1939 to 31st January 1940 total imports from the United Kingdom were of the value of Rs. 14,07,945, and from the U S A. Rs. 12,59,522.

In 1935-36 the total Indian imports were valued at Rs. 28 lakhs and in 1934-35 at Rs. 16 lakhs. Both transmitting and receiving apparatuses are included in these figures. Imports in 1936-37, including valves worth 1½ lakhs, which were for the first time recorded under this head, amounted to Rs. 35 lakhs, the share of complete receivers being Rs. 25 lakhs. In 1937-38 complete Receivers accounted for over Rs. 28 lakhs and in 1938-39 to over Rs. 25 lakhs. For the ten months 1st April 1939 to 31st January 1940 complete Receivers accounted for Rs. 32·8 lakhs out of a grand total of wireless imports amounting to Rs. 40·05 lakhs.

Below are given tables showing the value of the radio import trade, the value of imports into Bombay and the share of principal countries.

FIGURES OF WIRELESS IMPORTS.

The following Tables give the position regarding wireless imports into British India.

ALL-INDIA IMPORTS.

1938-39	Rs. 40·9 lakhs

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before

Massey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left prac-

tically free, though there existed certain regulations which were not enforced, though Lord Clare who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe, who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette* founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Darpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section or His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over press and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter, (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below : (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (e) any person challenging the orders of Government should do so in the local High Court; (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months; (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

The Indian and Eastern Newspaper Society.—An important development in connection with newspapers in India took place in 1939, when the Indian and Eastern Newspaper Society was formed. The Society's principal objects are as follows :—(a) To act as a central organisation of the Press of India, Burma and Ceylon; (b) To promote and safeguard the business interests of members as affected by the action of Legislatures, Governments, the Law Courts, municipal and local bodies and associations or organisations commercial or formed for any other purpose; (c) To collect information upon all topics having a practical interest for members and to communicate the same to them; (d) To promote co-operation in all matters affecting the common interests of members; (e) To hold periodical conferences of its members to discuss and determine action on matters of common interest; (f) To make rules to govern the conduct of its members in specified matters, to provide penalties for the infringement thereof, and to provide means of determining whether there has been such infringement; (g) To maintain a permanent secretariat in India which should watch over the interests of members and should permit of a constant interchange of information and views; (h) To do all such other things as may be conducive or incidental to the attainment of the aforesaid objects.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks.—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India.—Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Central Government may by notification in the Official Gazette of India appoint, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of:—

- (a) the presidents, vice-presidents and the secretaries of the Local Boards;
- (b) one person elected from amongst the members by each Local Board;
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board;
- (d) not more than two non-officials, nominated by the Central Government.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Central Government shall nominate an officer of the Crown to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11½ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,60,00,000 and the Balance Sheet of 31st December 1939 showed the deposits at Rs. 87,84,16,475, and Cash Rs. 11,09,02,600 with a percentage of cash to liabilities of 12.62.

Agreement with Reserve Bank of India.—

The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of

India Act, 1934, and there is no branch of the Imperial Bank of India, as ascertained by expert accounting investigation.

In consideration of the performance of the Agency duties, the Reserve Bank of India pay to the Imperial Bank of India a sum which shall be for the term of 15 years, make to the Imperial Bank the following payments :—

(a) during the first five years of this agreement Rs. 9 lacs per annum ;

(b) during the next five years of the agreement Rs. 6 lacs per annum ; and

(c) during the next five years of the agreement Rs. 4 lacs per annum.

The Directorate.

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of:—

- Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India.
- Securities issued by State aided Railways, notified by the Central Government.
- Debentures, or other securities issued under Act, by, or on behalf of a district or municipal board or under the authority of any State in India.
- Debentures of companies with limited liability registered in India or elsewhere.
- Goods, or documents of title thereto, deposited with, or assigned to the Bank.
- Goods hypothecated to the Bank against advances.
- Accepted Bills of Exchange or Promises.
- Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, it authorised by the Central Board, in 'g'.

(2) Selling of promissory notes, debentures, stock-receipts, bonds, annuities, stock, shares, securities or goods or documents of title to goods deposited with or assigned to the Bank as security for advances.

(3) With the sanction of the Provincial Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases.

(4) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(5) Investing the Bank's funds in the securities referred to in (1) a, b, c and d.

(6) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand.

(7) Buying and selling gold and silver.

(8) Receiving deposits.

(9) Receiving securities for safe custody.

(10) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims.

(11) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee.

(12) Acting as Administrator, for winding up estates.

(13) Drawing bills of exchange and granting letters of credit payable out of India.

(14) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases.

(15) Borrowing money upon security of assets of the Bank.

(16) Subsidizing the pension funds of the Presidency Banks; and

(17) Generally, the doing of the various kinds of business including foreign exchange business.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

- For a longer period than six months except as provided in clauses 3 and 14 above;
- upon the security of stock or shares of the Bank;
- save in the case of estates specified in Part 1 (Courts of Wards) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given unless such discounts or advances carry with them the several responsibilities of at least two persons of firms unconnected with each other in general partnership.

(4) Discounts cannot be made or advances given against any security not being a security in which a trustee may invest trust money under the Indian Trusts Act, 1882.

The Balance Sheet of the Bank as at 31st December 1939 was as follows :—

LIABILITIES.	Rs.	a.	p.	Rs.	a.	p.	ASSETS.	Rs.	a.	p.
Capital :—							Investments (of which securities are valued in accordance with bye-law 29 of the Bye-Laws of the Bank) :—			
Authorised—2,25,000 shares of Rs. 500 each ..	11,25,00,000	0	0				Government Securities ..	37,06,31,173	5	4
Issued and Subscribed—2,25,000 shares of Rs. 500 each ..	11,25,00,000	0	0				Other Trustee Securities ..	49,66,894	10	8
Called up—75,000 shares of Rs. 500 each, fully paid ..							Other Authorised Securities ..	46,34,497	1	5
							Immovable Properties at or below cost ..	1,18,697	12	7
							Advances :—	38,03,51,262	14	0
1,50,000 shares of Rs. 500 each, Rs. 125 paid ..	3,75,00,000	0	0				Loans ..	10,70,25,876	13	1
							Cash Credits and Overdrafts ..	30,98,11,329	4	4

* Govt. Deposits were taken over by Reserve Bank as from 1st April 1935.

Reserve Bank.—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1934 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs. 100 each fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of:—

(a) A Governor and two Deputy Governors appointed by the Central Government after consideration of the recommendations made by the Board.

(b) Four Directors nominated by the Central Government.

(c) Eight Directors elected on behalf of the shareholders on the various registers.

(d) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact.—The Bank may transact business, viz:—The

interest, the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and

promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1s. 5 49-64d. and not higher than 1s. 6 3-16d. respectively provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

The Balance Sheet of the Bank as at 31st December 1939 was as follows :—

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

TOTAL DEPOSITS OF ALL EXCHANGE BANKS SECURED IN INDIA.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets latest available of the undernoted Banks will give some idea of this:—

LIABILITY OF BILLS OF EXCHANGE REDISCOUNTED AND STILL CURRENT.

	£
Chartered Bank of India, Australia and China	3,264,000
Eastern Bank, Ltd.	525,000
Hongkong and Shanghai Banking Corporation	2,513,000
Mercantile Bank of India, Ltd.	1,393,000
National Bank of India, Ltd.	2,693,000
	<hr/> 10,888,000

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets:—

In Thousands of £.

Name.	Capital.	Reserve.	Deposits.	Cash and Investments.
American Express Co.	1,287	778	4,751	6,056
Banco Nacional Ultramarino	363	18	7,394	2,581
Bank of Taiwan, Ltd.	772	482	19,091	14,630
Chartered Bank of India, Australia and China	3,000	3,000	46,191	31,772
Comptoir National D'Escompte de Paris	2,269	2,542	48,801	10,642
Eastern Bank, Ltd.	1,000	500	7,499	7,170
Grindlay & Co., Ltd.	250	100	3,744	2,445
Hongkong and Shanghai Banking Corporation	1,239	7,119	52,049	37,240
Lloyds Bank, Ltd.	15,810	9,500	433,379	281,322
Mercantile Bank of India, Ltd.	1,050	1,075	14,852	10,837
Mitsui Bank, Ltd.	3,529	3,929	71,256	34,712
National Bank of India, Ltd.	2,000	2,200	27,856	18,380
National City Bank of New York	19,183	12,995	577,043	457,979
Netherlands India Commercial Bank	3,855	1,542	12,922	10,176
Netherlands Trading Society	4,676	1,343	41,337	26,379
Thomas Cook & Son (Bankers) Ltd.	125	125	4,022	3,561
Yokohama Specie Bank, Ltd.	5,882	8,214	92,086	64,624

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature.
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion.
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets:—

In Lakhs of Rupees.

Name.	Capital.	Reserve.	Deposits.	Cash and Investments.
Allahabad Bank, Ltd., affiliated to Chartered Bank of India, Australia & China	35	52	1,116	626

1917	..	303	162	3117					

Since those events confidence has been largely restored. But in April 1923 the Alliance Bank of Simla failed. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The end of June 1938 witnessed a banking crisis in South India in the failure of the Travancore National & Quilon Bank Ltd. The bank held a very important position among the South Indian joint stock banks with a paid up capital of Rs. 25 lakhs. The total resources were said to be large and the bank had 78 branches. As soon as the news of the failure was received, the Reserve Bank sanctioned special credit limits to banks in South India and these limits were later doubled. Although the acuteness of the crisis soon subsided, an underlying feeling of nervousness continued until the close of the year.

LONDON OFFICES, AGENTS OR CORRESPONDENTS OF BANKS AND FIRMS (DOING BANKING BUSINESS) IN INDIA.

Name of Bank.	London Office—Agents or Correspondents.	Address.
Reserve Bank of India	London Office	31-33, Bishopsgate, E. C. 2.

Thomas Cook & Son	London Office	Berkeley Street, Piccadilly.
Yokohama Specie Bank	Ditto	7, Bishopsgate, E. C. 2.

Note.—P. & O. Banking Corporation Ltd. is merged into Chartered Bank of India, Australia and China as from 1st February 1939.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a hoondee broker, and the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee is usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shown that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or $1\frac{1}{2}\%$, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business described are principally Marwaries and "Bikaner" and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only

and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates during the last 12 years :—

Year.	1st Half-year.	2nd Half-year	Yearly average.
1928	6.945	5.456	6.2
1929	6.878	5.788	6.333
1930	6.508	5.277	5.892
1931	6.735	7.353	7.044
1932	6.022	4.033	5.027
1933	3.627	3.5	3.563
1934	3.5	3.5	3.5
1935	3.5	3.41	3.45
1936	3	3	3
1937	3	3	3
1938	3	3	3
1939	3	3	3

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras and Rangoon and by the Imperial Bank at Colombo and Karachi and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver

all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below —

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (129 miles), the East Indian Railway; Bombay to Kalyan (82 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853; wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of 252 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 2½, to the rupee, the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions, the result was that by 1869 the deficit on the Railway budget was Rs. 166 lakhs. Seeking for some more economical

method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87) the Southern Mahratta (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umhal-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step or even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,235 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 87). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Hamal and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantaj, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates terms being found unattractive in view of the competition of 4 per cent. trustee stocks;

they were revised in 1898 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and of all the sound companies promoted a substantial premium. Conditions after the war and the Acworth Convention far from approving of this system, but that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in this open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased

the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the wisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1906 the railways for the first time showed a small gain to the State.

Four years ended 1907-08 saw the net receipts grow upon £2 millions a year. But there was a relapse. Badly accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results for succeeding years will be seen from the following statements:—

	Contribution to General Revenues	Railway Reserve Fund.	Total Gain.
	£	£	£
1926-27	4,486,045	1,108,433	5,594,478
1927-28	4,707,239	3,460,000	8,167,239
1928-29	3,933,834	1,937,895	5,871,729
1929-30	4,388,950	1,561,650	3,027,300
1930-31	4,301,775	8,192,625	3,890,850
1931-32	4,020,150	—	6,900,000
1932-33	—	—	—
1933-34	—	—	—
1934-35	—	—	—
1935-36	—	—	—
1936-37	—	—	—
1937-38	Rs. 12,76,00,000	—	—
1938-39	1,37,00,000	—	—

* The contribution to General Revenues due for the year 1932-33 amounts to Rs. 523 lakhs or 13 lakhs less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 95.48 crores in 1936-37; but the net result of the year's working showed a gain of Rs. 1.21 lakhs.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22d. per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counter-balance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, has for some time kept this scheme in the background.

The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been

not at all feasible. The work is now being brought up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1936-37 the principal open line improvements were the protection works for the Harding bridge E. B. Ry., the renewal of girders on the Goral bridge E.B. Ry., improvements to Haridwar Station E. I. Ry., also to Howrah Station, the remodelling of certain yards and permanent way renewals.

The principal improvements to open line during 1937-38 were the continuance of the regrading of the Goral bridge and the completion of the improvements at Haridwar Station.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this system, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole

question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared expenditure and policy and

its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Incheape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929.

(b) the representative of the predominant owning partner in systems aggregating 23,451 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of an Senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by turning to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870 when the State system was adopted

it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management

The relative advantages of State and Company ownership of Government railways in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State

or Company management. The Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1925, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present

contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company management in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4½ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929, the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway had entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 705 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1923-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its management taken over by His Exalted Highness the

Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council,—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be prescribed by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways.

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores

for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr. Pope's second report were :—

1. Intensive use of locomotives.
2. Intensive use of coaching stock.
3. Intensive use of machinery and plant.
4. Uneconomical wagons.
5. Combining resources between railways
6. Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations.
7. Ticketless travel.
8. Methods of increasing earnings.

Job analysis was continued on most of the railways during the year which resulted in substantial economies. Apart from this, Railways continued to explore the possibilities of increasing earnings and reducing working expenses.

Indian Railway Enquiry Committee.

As a result of the recommendation of the public Accounts Committee the Indian Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgwood, C.B., C.M.B. Chief General Manager of the London North Eastern Railway. Its terms of reference were :

To examine the position of Indian State-owned railways and to suggest such measures as may, otherwise than at the expense of the general budget,

- (i) to secure an improvement in net earnings due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and

- (ii) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for.

Rates Advisory Committee.

The Railway Rates Advisory Committee continued under the Presidency of Sir Zahid Suhrawardy. Three cases were pending with the Committee at the beginning of the year and six fresh cases were referred to it for investigation.

Closer Contact with the Public

The closest possible contact between the Railways and the business community was maintained by means of the Local Advisory Committees, which were first introduced in 1927 in connexion with Chambers of Commerce, Trade Associations and personal contact by railway officers with business firms.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhor Ghat Reversing Station.

Note on Publicity (1938-39.)

Special propaganda was undertaken by the Central Publicity Bureau with a view to the stimulation and development of internal traffic, particularly lower class, on an all-India basis. 2,14,000 handbills and over 67,000 folders were printed by the Bureau for these purposes and a special advertising campaign was organised over the East Indian and Eastern Bengal Railways to promote Inter and Third Class traffic.

Publicity was also undertaken by individual railways and 228 important meals and fairs were the subject of special propaganda during the year. In this connection a large number of handbills, folders, pamphlets and posters were printed and distributed, which amounted to more than (i) 6,000,000 handbills, (ii) 1,076,000 folders and pamphlets and (iii) 173,000 posters. In addition to the above propaganda a considerable amount of advertising was done in the local presses by the railways and wide publicity given to the various forms of concessions such as Zone tickets, day-as-you-please tickets, Cheap Suburban Market and Shopping tickets.

Cinema cars and Cinema lorries continued their propaganda activities. Over 241 shows were given at stations to audiences estimated at 690,000 and 383 important rural centres were visited by lorry, where 406 open shows were given to audiences estimated at 500,000.

Open Mileage—The total route mileage on 31st March 1930, was made up of—

Broad-gauge	21,164.61 miles.
Metre-gauge	15,861.92 "
Narrow-gauge	4,107.20 "

Class I Railways	Number of seats in passenger carriages.			
	1st	2nd	Inter	3rd
5'-6"	22,076	42,187	50,726	6,25,624
3'-3½"	9,869	14,013	14,715	3,21,771

Under the classification adopted for statistical purposes, this mileage is divided between the classes three of railways as follows—

Class I	36,570.68 miles.
Class II	3,455.97 "
Class III	1,124.05 "

During the year 1933-39 the mileage of new one under construction was 400.38 miles.

Financial Results of Working.—The gross traffic receipts of the state owned railways amounted to Rs. 94.45 crores in 1933-39 or a decrease of Rs. 53 lakhs over the previous year.

(b) Of the total of 3,474 persons killed, 2,995 or 86 per cent. were other than passengers, and railway servants and of this number 2,186 were trespassers and 641 were reported to be suicides. Furthermore 62 persons were killed on railway premises otherwise than during the movement of trains, vehicles, etc.

(c) As compared with the previous year, persons other than passengers and railway servants killed increased by 178 principally under the heads "trespassers" (57) and "Suicides" (146), but there was a decrease of 40 and 34 in the number of fatal accidents to "Passengers" and "Railway servants" respectively.

Damage by Earthquakes, Fire, Floods and Cyclones.—The year under review was a fortunate one in that beyond the usual floods, cyclones and other natural accidents the resulting damage of which was relatively small there were no major catastrophes to contend with.

Amenities for Passengers.—To assist trade and the travelling public, suitable additions and alterations were made in the timings, etc. of all kinds of passenger train services. Goods trains were accelerated, transit of mails quickened, more out-garages were opened and special facilities provided at mela-states and

fares were adjusted, tariffs simplified, various amenities were provided for passengers and closer contact was maintained with the business community.

Railways have been steadily and systematically pursuing their policy of effecting improvements making for the greater comfort and convenience of passengers to the fullest extent to which funds are available. The following indicate broadly the policy followed:—

(a) **Train Services.**—Additional trains wherever run and timings changed to suit the changing needs of passenger traffic and greater recourse was had to the provision of light trains giving more frequent and rapid service on certain sections.

(b) **Convenience.**—Programmes were drawn up and worked to for the provision of additional waiting rooms and halls covered and raised platforms, separate refreshment rooms for Hindus and Mahomedans and vendors' stalls.

Arrangements for the supply of drinking water were improved, and special action taken to ensure the washing, cleaning and disinfection of carriages, and particularly latrines in third class carriages.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	1,306.39
--------------	-------	----------

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	2,117.03
--------------	-------	----------

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatargarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Net earnings	Rs. 2,47,76,000
Earnings per cent.	3.1%

Bombay Baroda.

The Bombay Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Mitra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Earnings per cent.	5.5%

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhand railway was amalgamated with it.

Net earnings .. Rs.	7,85,73,000
Earnings per cent.	5.3%

(Mileages are route mileages.)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Mileage open	3,727.16
Capital at charge .. Rs.	1,14,21,85,000

Earnings per cent.	3.6%

Madras and Southern Mahratta Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system

on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	2,966.85

Net earnings .. Rs.	2,57,15,000
Earnings per cent.	4.8%

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

*(Commercial Section.)

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	2,531.75

Net earnings .. Rs.	1,61,72,000
Earnings per cent.	3.5%

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Katbiawar system of railways, constructed by subscription, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project of a causeway from an side to Talaimannar, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the current to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 3 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kawkpku stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 120 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 feet aggregate of rise and fall. The Hukong Valley route, although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system—*contd.*

COAL.

Most of the coal raised in India comes from Singareni in Hyderabad, and in Central Provinces but there are a number of smaller coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at another.

Provincial production of Coal during the years 1937 and 1938.

Average

In 1938 the total production of Indian Coal rose to 28,342,906 tons or 3,306,622 tons (15.2 per cent.) increase on the output of the previous year and is thus the highest figure yet recorded. In the years 1931, 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,803,048 tons in 1930. In 1934 the direction of change was reversed and production increased by 2,268,284 tons (or 11.4 per cent.) from 19,789,163 tons in 1933 to 22,057,447 tons. In 1935 the increase continued but at a less rate by 959,248 tons (or 4.3 per cent.) to 23,016,695 tons. In 1936 there was again a decrease by 405,874 tons (1.8 per cent.) to 22,610,821 tons, followed in 1937 by an increase of 2,425,565 tons (10.7 per cent.) to 25,036,386 the highest output till then, but which has now been greatly exceeded. This increase was shared by all provinces except Orissa, which showed a slight decrease.

The increased output of 13.2 per cent. in 1938 was accompanied by an increase of 36.2 per cent. in the total value of the coal produced in India to Rs. 10,64,23,835 (£7,942,077) in 1938. from Rs. 7,81,02,439 (£5,872,364) in 1937.

There was also an increase of 10 annas 2 pies in the pit's month value per ton of coal for India as a whole, namely from Rs. 3-1-11 to Rs. 3-12-1. This increase in value was recorded from all provinces without any exceptions. In opposition

to the trend of 1934, 1935 and 1936, the exports of coal from India in 1937 have more than doubled as compared with 1936, deducting Burma's share. Since the separation of Burma on the 1st April, 1937, it appears in these statistics as a foreign country and in 9 months has taken a little more than Ceylon did in the year.

The average number of persons employed in the coalfields during the year showed an increase of 16.5 per cent. The average output per person employed showed a decrease from the high figure of 130.2 tons in 1934, which is practically the same as the figure for 1929, namely 130.4 tons, the highest figure recorded, to 124.92 tons in 1938 which is less than the figure 128.59 for 1937. The figures for the last nine years average higher than those previously recorded; these higher figures are partly due to an increased use of mechanical coal-cutters, and partly to concentration of work. During recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. The fall in output per person employed in 1938 is of course due to increased employment.

There was a decrease in the number of deaths by accident from 274 in 1935, 435 in 1936, to 213 in 1937 but the number increased to 338

due to accidents in Bengal, Bihar and Hyderabad in 1938. In 1935 there were three major accidents, at Loyabad and Bagdigi collieries in the Jharia coalfield and at Kurhurbaree colliery in the Giridih coalfield, in which 11, 19 and 62 lives, respectively, were lost; in 1936 there were two, at Poidih in the Raniganj field, and Loyabad in the Jharia field which accounted for 209 and 35 deaths respectively. These figures may be compared

with the annual average for the quinquennium 1919-1923, which was 274, the annual average for the quinquennium 1924-1928 which was 215, and the annual average for 1929-1933, which was 156. The death rate was 1.09 per thousand persons employed in 1937 and 1.49 per thousand in 1938, the average figure for the period 1919-1923 was 1.36 for the period 1924-1928 was 1.16 and for the period 1929-1933 was 1.08.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast-furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of iron-ore in the Pansira Buru area, consisting of two large deposits, one at Pansira Buru and Bnda Buru. The discovery of iron-ore in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite often lateritised at the outcrop. Cross-sections into the interior of the deposit show that the hematite becomes very friable not far below the

outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The **Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

For some years up to and including 1929 the production of iron-ore in India had been steadily increasing; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (30½ million tons in 1935 and 48½ million tons in 1936) and France (32.3 million tons in both 1935 and 1936) but her reserves of ore are not much less than three-quarters of the estimated total in the United States and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. From 2,430,136 tons in 1929 the output of iron-ore in India fell to 1,228,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons and in 1935 rose still further to 2,364,979 tons, in 1936 to 2,553,247 tons, in 1937 to 2,870,832 tons valued at Rs. 45,86,378 (24,44,840), but in 1938 the production fell slightly to 2,743,675 tons valued at Rs. 45,56,974 (24,40,673). These figures exclude the output of about 25,000 tons, by the Iruma Corporation, which is used as a flux in lead-smelting.

The **Steel Industry (Production) Act 1924** (Act No. XIV of 1924),—authorised, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from materials wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927, the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British manufacture.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

The catastrophic fall in the production of manganese ore in India from the peak figures of 1927, namely 1,129,353 tons valued at £2,703,065 *f.o.b.* Indian ports to 212,604 tons with a value of £140,022 in 1932 has been recorded previously. In 1933 the output rose slightly to 213,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,331. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £929,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,905. In 1934 there was, however, a partial recovery to 406,306 tons valued at £388,249, further increased in 1935 to 641,483 tons valued at £768,630, in 1936 to 813,442 tons valued at £1,124,422 and in 1937 to 1,051,594 tons valued at £3,229,554 but in 1938 there was a fall in output and prices to 967,929 tons valued at £2,932,445. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one-twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries had the effects of the slump been so seriously felt as in the manganese industry; it is gratifying, therefore, that some measure of recovery can now be recorded, though the value of the output is still less than half the peak figure of 1927, with a much higher value.

The substantial recovery in 1936 is due mainly to increases in the Balaghat, Nagpur and Bhandara districts of the Central Provinces, and to the resumption of work in Panch Mahals. The output from Sandur State fell by a third. The most pleasing feature of this improvement is the recovery of the Central Provinces production from the trivial figure to which it had fallen in 1933 (28,789 tons) to 568,806 tons in 1936.

The recovery in 1936 has been set back by decreases in the Bala Ghat and Bhandara Districts of the Central Provinces, Keonjhar in the Eastern States Agency and in North Kanara (Bombay), the Sandur State (Madras) and in the Chitaldurg districts of Mysore State. There has been an improvement in the production from the Panch Mahals, Chhindwara, Bellary, Tumkur and Vizagapatam.

During 1932 and 1933 the majority of mines in the Central Provinces had been closed, including several mines that had never been closed since the commencement of work in 1900 and 1901; there had been a total cessation of production in the Nagpur district and almost total cessation in Bhandara. The amount of ground recovered can be judged from the fact that the production of the Central Provinces averaged 660,559 tons annually during the quinquennium 1924 to 1928. All producing districts are now actively engaged in the output of Manganese-ore.

The partial recovery of the Indian manganese industry during 1934 and 1935 was reflected in an increase of exports from the nadir of 1932 to 1,151,834 tons in 1937 fell to 648,740 tons in 1938. The United Kingdom even with a decrease of over 127,000 tons retained her position as the chief importer of Indian manganese-ore. The second place as importer was taken by Japan with 113,212 tons, with the U. S. A. third with 89,037 tons and France a close fourth with 80,950 tons. The Belgian German figures show a marked decrease.

The fall in the Indian output of manganese-ore of recent years can be correlated with the fall in the price of first-grade ore, *c.f.* United Kingdom ports, from an average of 22.9d. per unit in 1924 to 14.9d. per unit in 1929, and then to 9.5d. per unit in 1932 and 1933. A partial recovery in output in 1934 accompanied a rise in the average price to 10.5d. per unit, and to 12.26d. in 1936, rising as high as 22.5d. in 1937, but in 1938 the price fell to 19.7d. per unit.

This continued fall in the price of manganese-ore from 1924 to 1932 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of manganese-ore was much greater than the rate of increase in the world's production of pig-iron and steel. And although there was a fall in the world's output of manganese-ore in 1928, there was a very large increase in 1929, greater than was justified by the increased production of iron and steel in that year, and it is evident that the world's available supplies of manganese-ore are now much in excess of normal requirements. The present chief sources of production of Manganese-ore are Russia, India, the Gold Coast, South Africa, Brazil, Cuba, Egypt, Czechoslovakia and Japan. Russia is able to place a large quantities of ore on the market at a price with which many Indian producers cannot compete without a return to pre-war railway freights. The Gold Coast has also become a serious competitor of recent years. The large deposits of high-grade manganese-ore discovered near Postmasburg in South Africa are also being developed. With this increasing competition and falling prices it is not surprising, therefore, that in spite of the apparent prosperity of the Indian manganese industry in 1929 and 1930, as judged from figures of production and export, yet by 1930 the industry as a whole had arrived at a stage of relative depression, causing many operators to cease work. Added to increased available supplies there was in 1931 and 1932 a disastrous decline in the activities of the iron and steel industry of the world.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyon, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the

Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way.

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,455.8 ozs. valued at Rs. 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 329,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123). In 1933 there was an increase to 336,108.3 ozs. valued at Rs. 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142.9 ozs., but the value increased to Rs. 2,92,71,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722.6 ozs. In 1935 the output rose again to 327,652.5 ozs. valued at Rs. 3,04,01,775 (£2,285,848), and in 1936 to 333,385.6 ozs. valued at Rs. 3,06,02,413 (£2,300,933). In 1937 the output fell slightly to 331,748.2 ozs., valued at Rs. 3,04,80,105 (£2,291,737). In 1938 the output decreased slightly to 321,147.8 ozs. valued at Rs. 3,04,75,397 (£2,274,283) from 330,743.9 ozs. valued at Rs. 3,03,95,871 (£2,285,404). All fields shared in this decrease, except the United Provinces.

The average number of persons employed on the Kolar Gold Field during 1938 was 24,031 of whom 15,528 worked underground.

SALT.*

There was a moderate increase in the production of salt in India in 1938, made up of increase in the production in Northern India and Madras, with decreases in the production in Sind and Bombay.

The production in Aden was less in 1938 than in 1937, the production in Burma showed a large decrease.

There was a decrease in the imports of salt into India in 1938.

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business in the Brokers' Hall, bought in 1887 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Province of Bombay. Their powers are defined by rules and regulations framed by the Governing Board and approved by the Government of Bombay. The Board has power to stop business in times of emergencies for 24 hours only and for any further period with the previous sanction of Government. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 22,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions. It was revived in 1922 but has again ceased to function. A new Stock Exchange was opened in Bombay with its headquarters in Sir Phiroze-shah Mehta Road in February 1938, known as the **Indian Stock Exchange, Ltd.**

For many years the **Calcutta Share Market** met in the open air in business quarters and was under no control except that of market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 687. The Committee has restituted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under

blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures. The Association issues a *Year Book* which contains official information relating to all stocks and shares dealt in on the Stock Exchange.

A general meeting of the shareholders annually elects a Committee of 16, which elects several Sub-Committees and Hon. Office Bearers—the President and two Joint Hon. Treasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1940.—J. M. Dutt, President, W. R. Elliot, E. H. Staples, W. A. Black, G. F. Berthoud, Sagarnath Nathany, H. C. Chatterjee, Dr. M. M. Roy, Shambhu Nath Dutt, Gobind Lal Baner, Kedarnath Poddar, Basant Lal Chaturvedi, Jagannath Jhunjhunwala, Bishambhar Nath Chaturvedi, Laxmanadas Agarwala, and Kedarnath Khandelwal.

Joint Honorary Treasurers.—Kedarnath Khandelwal, Kedarnath Poddar, and Shambhunath Dutt.

Secretary.—D. Chakravarty, M.A., B.L.

Editor, Year Book.—A. K. Sur, M.A.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July, 1928, by Sir Stanley Jackson, then Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well equipped library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The Madras Stock Exchange Association, Limited.—The only Registered Institution in Southern India of brokers dealing in Shares, Stocks and Government Securities. Promoted and Registered on 12th August 1937. It has two kinds of members—*viz.* Founder and Ordinary. The Founder members have to pay an admission fee of Rs. 500 whilst Ordinary members pay Rs. 1,000. Deposit from each member is Rs. 5,000 or such higher amount as the Executive Committee may decide. Each member further has to pay a monthly subscription of Rs. 25. Working hours of the Exchange are between 11-30 a.m. and 12-30 p.m. Dealings in about 18 shares of Companies are allowed on Forward monthly basis. Other shares are quoted on cash basis. Government Securities are also quoted on cash basis, i.e., delivery within seven days.

President.—C. M. Kothari; **Vice-President.**—W. L. Kuop; **Hon. Secretaries.**—G. A. Krishnamurti, and T. M. Rangachari, **Hon. Treasurer.**—R. C. Paterson. Registered Office, Madras. Telephone No. 4075.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very keen in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another but constantly work in association.

In 1921, the London Chamber of Commerce, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organisation. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it, have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by Sir Fazlulbhoj Currimbhoj Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organisation. Sir Fazlulbhoj's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir Dinshaw Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazlulbhoj Currimbhoj as the first President. The Con-

gress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organisation languished for lack of support for some years until a number of merchants specially interested in currency and exchange questions revived it in 1926 at Delhi and in 1927 at Calcutta, the initiative in the new activities having, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December, 1926, and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located."

Among the objects for which the Federation is established are the following:—

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of the Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

Federation of Indian Chambers of Commerce and Industry.

The Federation has more than 80 Chambers of Commerce and Commercial Associations affiliated to it and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate.

Office-Bearers for 1940-41:

President:—Amritlal Ojha.

Vice-President:—Chunnilal B. Mehta.

Honorary Treasurer:—N. R. Sarkar, Calcutta

Secretary:—D. G. Mulherkar.

Office:—28, Ferozshah Road, New Delhi.

Representatives of the Federation on various Committees.

Central Advisory Committee for Lighthouses.—M. A. Master, B.A., LL.B., Bombay; Gaganvihari L. Mehta, Calcutta; Rao Bahadur C. Gopal Menon, Madras.

Imperial Council of Agricultural Research.—D. P. Khaitan, Calcutta.

Standing Rice Committee:—Ashutosh Bhattacharyya, Calcutta.

Wheat Committee:—Ratilal Mulji Gandhi, Bombay.

Indian Tea Market Expansion Board:—D. C. Ghose, Jalpaiguri.

Forest Utilisation Central Advisory Board:—Lala Shri Ram, New Delhi; Lala Padampat Singhania, Cawnpore.

Indian Accountancy Board:—Sirdar P. S. Sodhbans, Lahore.

Indian Institute of Science, Bangalore.—Kapilram H. Vakil, M.Sc. Tech (Manc.), F.I.C., M.I. Chem. E., F.I.A.S., Bombay.

Governing Body of the International Labour Organisation.—D. S. Erulkar, London.

Permanent Agricultural Committee.—(International Labour Organisation) Walchand Huachand, Bombay.

International Organisation of Industrial Employers.—(General Council) D. S. Erulkar, London.

ALL-INDIA ORGANISATION OF INDUSTRIAL EMPLOYERS.

The Employer's Delegations to the various sessions of the International Labour Conference felt the necessity of a central organisation in India representing employers of industrial labour in the country with a view to studying various questions coming before these International Conferences from the Indian employers' point of view. Mr. Walchand Hirachand, who was the President of the Federation of Indian Chambers of Commerce and Industry, with the consent of the Committee, took the initiative of launching a central organisation in December, 1932, to represent Indian employers. Any organisation representing an industry, the constituents of which are employers of industrial labour, is entitled to become a member of the All-India Organisation of Industrial Employers (briefly called A.O.I.E.). Besides this membership, any industrial concern coming under the Factory Laws, is also entitled to become a member of the Organisation.

The annual subscription for the industrial associations is Rs. 25 and for individual industrial concerns Rs. 10.

The Organisation has on its roll 13 industrial associations representing Ahmedabad and Bengal millowners, Northern India employers, salt industry, national shipping, sugar industry, Baroda State Mills and Industries, glass, coal mining, tea, Delhi Factory Owners and jute industry. Besides, there are more than 104 big industrial concerns as members of the Organisation.

Office-Bearers for 1940-41:—

President:—Lala Shri Ram

Vice-President.—Lala Karamchand Thapar, Calcutta.

Hon. Treasurer:—Dr N. N. Law, Calcutta.

Secretary:—D. G. Mulherkar,

Office:—28, Ferozshah Road, New Delhi.

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1940-41:—

President:—The Hon'ble Mr J. H. S. Richardson

Vice-President:—G. B. Morton, O.B.E., M.C.

Members.—J. H. Burder, H. H. Burn, H. G. Cooper, M.C., D.C.M., D. R. Kinloch, E. B. Pratt; R. R. Haddow and H. G. Stokes

Secretary.—D. C. Fairbairn *Deputy Secretary*. J. J. B. Sutherland *Assistant Secretaries*. T. E. Matheson, J. B. Morrison and W. D. Bryden.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council State.—The Hon'ble Mr. J. H. S. Richardson.

The Bengal Legislative Assembly.—F. H. French, J. R. Walker, R. Haywood, M. A. F. Hirtzel, R. M. Sassoon, W. C. Wordsworth and D. Hendry.

The Calcutta Port Commission.—A. O. Brown, T. S. Gladstone, G. V. Lloyd, Sir James Reid Kay, K. J. Nicolson and A. N. Wardley.

The Calcutta Municipal Corporation.—F. C. Cross, F. G. Watson, J. H. Speller, J. A. Gloag, G. U. Pottinger and G. S. G. Vernon.

The Board of Trustees for the Improvement of Calcutta.—F. Rooney.

The Bengal Boiler Commission.—R. A. Cole, W. Gow and W. H. W. Urquhart, A.M.I. Mech. E.

The Bengal Smoke Nuisances Commission.—R. J. Oliver; D. Archer.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Factories Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Accident Insurance Association,

Calcutta Flour Mills' Association, Calcutta River Transport Association, the Masters' Stevedores' Association and the Association of Paint, Colour & Varnish, Manufacturers in India, Calcutta Freight Brokers' Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (G. C. Gee Smyth), Head Office Manager (Mr. F. W. Kendall) and Assistant Superintendents (Messrs. J. B. F. Henfrey, B. Perry and S. J. Warwick) and the staff at the time of the last official returns consisted of 105 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measures' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BENGAL NATIONAL CHAMBER OF COMMERCE.

The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 400. Almost all the leading Indian com-

mercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

List of Associations affiliated to the Bengal National Chamber of Commerce.—All-India Soap Makers' Association; All-India Tea Growers' Federation; Association of Engineers; Bengal Banks' Association; Bengal Galvanized Sheet Merchants' Association; Bengal Glass Manufacturers' Association; Bengal Hosiery Manufacturers' Association; Bengal Industries Association; Bengal Jute Growers' Association; Calcutta Iron Merchants' Association; Calcutta Jute Exchange Ltd.; Calcutta Wine Association; East India Jute Association Ltd.; Faridpur District Merchants' Association; Indian Colliery Owners' Association; Indian Insurance Institute; Indian Planters' Association; Metropolitan Banking Association; Murshidabad Silk Asso-

ciation; Oil Mills Association; Paddy Merchants' Association; Tipperah Chamber of Commerce; Tipperah Traders Association; Tipperah Tea Association.

The Chamber enjoys the privilege of electing representatives to the Bengal Legislative Assembly, the Calcutta Port Trust, the Calcutta Improvement Trust, Bengal Industries Board, Economic Enquiry Board, Bengal, and other important bodies.

The headquarters of the Chamber are at Calcutta and its affairs are administered by a committee of 32 members in addition to the President, two Vice-Presidents, and the Honorary Treasurer, with the help of the Secretary and a number of Departmental committees.

OFFICE-BEARERS AND MEMBERS OF THE EXECUTIVE COMMITTEE FOR 1940

President.—Dr. N. N. Law, M.A., Ph.D.

Vice-Presidents.—A. C. Sen and Kumar Pramatha Nath Roy.

Hon. Treasurer.—Dr. Satya Churn Law, M.A., Ph.D.

Members of the Executive Committee.—Sir H. S. Paul, K.L., M.L.A.; N. R. Sarker, M.L.A.; S. C. Mitra; Sadhan Chandra Roy; Bhabotosh Ghattach; Arun Prokash Boral, D. N. Sen; Capt. N. N. Dutt, M.B.; Jiban Krishna Mitter; S. C. Ray, M.A., B.L.; Bonwari Lal Roy; I. B. Sen; Chiranjil Bajoria; Benode Gopal Mookerjee; J. C. Sen, B.A. (Harvard); Amar Krishna Das; Rakhal Chandra Dutta, M.A., B.L.; G. Basu, B.A., F.S.A.A., F.C.I.S. (Lond.); R. A.; Sudhinda Nath Roy Choudhury, M.A., B.L.; J. N. Lahiri.

Co-opted Members of the Executive Committee.—B. C. Ghose, B.Sc. (Lond.), B.Com. (Lond.); B. Mahtia, N. N. Rakshit; H. P. Bagaria; Nirmal Chandra Ghosh; Ashutosh Bhattacharyya. Dr. N. Sanyal, M.A., Ph.D., M.L.A.; J. N. Banerji; Jogendra Kishore Das, M.A., B.L.

Secretary (Offy).—S. R. Biswas, M.A.

Assistant Secretary (Offy.).—B. C. Kundu, M.A.

Office: 2, Royal Exchange Place, Calcutta; Telephone, Calcutta 3932, Telegrams: Conjoint.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil members Rs. 50. Merchants, Bankers, Ship-owners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1939-40:—

President.—G. H. Mehta.

Senior Vice-President.—N. L. Puri.

Vice-President.—R. L. Nopany.

Members.—A. L. Ojha; D. P. Khaitan; M. L. Shah; K. L. Jaitia; K. M. Naik; Kassim A. Mohamed; L. N. Birla; K. P. Goenka; Faizulla Gangjee; The Honourable Mr. S. K. Sinha; D. Khaitan; B. D. Bhattacharya; Lala Karanchand Thapar; Debesh Chandra Ghose; Bahadur Singh Sinha; Manjotaram Jaipuria; M. G. Bhargat; Pranjan Jaitlia.

Secretary.—S. R. Dhadda, M.A., LL.B.

The following Associations are affiliated with the Chamber.—Indian Sugar Mills' Association; Indian Chemical Manufacturers' Association; Indian Paper Mills' Association; Indian Insurance Companies' Association; Indian Jute Bales' Association; Indian Produce Association; East India Jute Association; Calcutta Rice Merchants' Association; Calcutta Kiraana Association; Gunny Trades Association; Indian Colliery Owners' Association; Indian Tea Merchants' Association; Marwari Rice Mills Association; Sindhi Merchants' Association; Shareholders' Association; Indian Coal Merchants' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to covering the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades:—(1) Jute, (2) Gunny; (3) Piece-goods and yarn; (4) Iron and Steel; (5) Coal and Minerals; (6) General.

The various bodies are as under :—

Bengal Legislative Assembly.—D. P. Khaitan
Calcutta Port Commissioner—Faizulla Gangjee.

Bengal Nagpur Railway Local Advisory Committee.—K. L. Jatia.

East India Railway Local Advisory Committee.—M. L. Shah.

Eastern Bengal Railway Local Advisory Committee.—J. Chakravarti.

Board of Apprenticeship Training.—M. G. Bhagat.

Railway Rates Advisory Committee.—A. L. Ojha; D. P. Khaitan; M. L. Shah; G. L. Mehta; Faizulla Gangjee

Board of Economic Enquiry, Bengal.—A. L. Ojha.

Indian Central Jute Committee—K. P. Goenka.

Visiting Committee of the Medical College Group of Hospitals.—M. L. Shah.

Visiting Committee of the Campbell Group of Hospitals—K. L. Jatia

Government Commercial Institute Board.—N. L. Puri.

Calcutta Traffic Advisory Committee—K. N. Khandelwal

Provincial Advisory Board on Indian Forest Utilization for Bengal—P. D. Himatsingka

Bengal Smoke Nuisance Commission.—M. G. Bhagat.

Government Weaving Institute, Serampore.—B. B. Bhattach.

Board of the Combined Commercial Museum and Health Publicity Section of the Calcutta Corporation—Kassim A. Mohammed.

Chamber's Auditors.—Messrs. S. B. Dandekar & Co., R. A.

MARWARI ASSOCIATION.

160A, CHITTARANJAN AVENUE CALCUTTA.

The Marwari Association was established in the year 1898.

Its chief objects are :

To promote and advance the moral, intellectual, commercial, economic, political and social interests of the Marwari community and to protect its rights and status.

To arbitrate in the settlement of disputes arising out of commercial transactions between parties either one or both of which are members of the Marwari community, provided the parties are willing to abide by the judgment and decision of the Association.

To adjust controversies between members of the Association.

To communicate with Chambers of Commerce and other mercantile and public bodies within or outside India and to concert and promote measures for the protection of trade, commerce and industries in which Indians, in particular Marwaris, are engaged.

To found and support establishments and institutions for disseminating commercial, technical and general education in different branches of Art and Science in the Marwari community.

To take all necessary steps for promoting, supporting or opposing legislation or other action, affecting the interests of the Marwari community, either by Government, or any department thereof or by any local body or bodies.

To take such action as may be necessary for securing the redress of grievances of any branch of trade commerce and industry in which the Marwari community is interested as also such other action as may be conducive to the development and growth of such trade, commerce and industry

The following are the Office-bearers for the year 1939-40.

President—Babu Mukundalal Chiripal.

Vice-Presidents—Babu Rajendra Singh Singhi Babu Kedarnath Poddar; Babu Chotalal Kanana, Raj Bahadur Badridas Tulshan

Honorary Secretary—Babu Babulal Shroff.

Jt. Secretary—Babu Mahabir Prasad Kasera.

Treasurer—Babu Ratanlal Goenka

Auditor—Babu Murlihar Sonthalia.

Principal Assistant to the Secretary and Office-manager—Babu J. N. Varma, M.A., F.R.E.S. (London).

The following are Representatives on public bodies :—

Legislative Assembly—Babu Bajjnath Bajoria, M.L.A.

Legislative Council—Raj Mungetoolal Tapuria Bahadur

Board of Economic Enquiry, Bengal—Babu Keshav Prasad Goenka

Board of Industries, Bengal—Babu Babulal Shroff

Non-Official Jut Vector, Howrah Jut.—Babu Ratanlal Goenka

INTERNATIONAL CHAMBER OF COMMERCE, INDIAN NATIONAL COMMITTEE.

The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

- (a) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber," is established, namely:
 - (i) To facilitate the commercial intercourse of countries,
 - (ii) To secure harmony of action on all international questions affecting finance, industry and commerce,
 - (iii) To encourage progress and to promote peace and cordial relations among countries and their citizens

by the co-operation of businessmen and organisations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 35 commercial bodies as Organisation Members and 54 commercial firms as Associate Members.

OFFICE-BEARERS FOR 1940-41.

President—Amrit Lal Ojha.

Vice-President—Chunilal B. Mehta, Bombay

Honorary Treasurer—Dr. N. N. Law, Calcutta.

Secretary—D. G. Mulherkar

Office—28, Ferozshah Road, New Delhi.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in the Memorandum and Articles of Association, are to encourage and promote a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency, to collect and circulate information on all matters of general commercial interest, to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general, to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business, to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest, and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 184. Of these 14 represent banking institutions, 16 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 13 insurance companies, 15 engineers and contractors, 120 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public

services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose. But a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies—

The Council of State, one representative.

Bombay Legislative Assembly, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1940-41 and its representatives on the various public bodies.—

President.—C. P. Bramble, M.L.A.

Vice-President.—J. M. B. Gibbons.

Committee.—R. W. Bullock; R. L. Ferard;
A. L. Hutson; A. McIntosh; G. H. Richmond;

G. S. Taunton; G. J. H. Walls.

Secretary.—C. H. Courthope-Munroe.

Asst. Secretary.—H. Royal, M.B.E., V.D.

Representatives on—

Council of State: The Hon'ble Mr. R. H. Parker.

Bombay Legislative Assembly: J. B. Greaves;
D. W. Mullock.

Bombay Port Trust: W. A. Bell; A. McIntosh; R. C. Lowndes; G. S. Taunton;
R. W. Bullock.

Bombay Municipal Corporation: H. C. D. Irwin.

Sydenham College of Commerce Advisory Board.
A. G. Gray.

Bombay Smoke Nuisances Commission:
H. F. Milne.

Persian Gulf Lights Committee: C. F. Morris.

Indian Central Cotton Committee: M. S. Durutti.

Empire Cotton Growing Corporation: S. B. Samoilys.

Back Bay Reclamation Scheme—Standing Advisory Committee: L. A. Halsall.

Auxiliary Force Advisory Committee: V. F. Noel-Paton.

Ex-Services Association: C. P. Bramble, M.L.A., (*Ex-Officio*).

Bombay Seamen's Society: C. H. Courthope-Munroe.

Indian Sailors' Home: C. E. Leman.

I. M. M. T. S. Dufferin: G. S. Taunton

Federation of Chambers of Commerce of the British Empire: Sir Geoffrey Winterbotham, Kt.

Railway Advisory Committees—

G. I. P.: A. McIntosh.

B. B. & C. I.: A. McIntosh.

Railway Rules Advisory Committee: G. H. Richmond; L. A. Halsall; C. J. Damala;
A. P. Darlow.

Government of Bombay Board of Communications: G. H. Richmond.

Bombay University: J. M. B. Gibbons.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions

are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 12, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late.

Associated Chambers of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1940.

President: The Hon'ble Mr. J. H. S. Richardson.

Millowners' Association, Bombay.

The Millowners' Association, Bombay, was established in 1875 and its objects are as follows—

- To encourage friendly feeling and unanimity amongst Millowners and users of steam, water and/or electric power on all subjects connected with their common good.
- To secure good relations between members of the Association.
- To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular.
- To consider questions connected with the trade, commerce and manufactures of its members.
- To collect and circulate statistics and to collect, classify and circulate information relating to the trade, commerce and manufactures of its members.

Any individual, partnership or company owning one or more mill or mills or press or presses or one or more ginn factory or factories actuated by steam, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1939 numbered 108.

The following is the Committee for 1940.—

V. N. Chandavarkar, (*Chairman*); R. L. Ferard, (*Dy. Chairman*); Sir Ness Wadia, K.B.E., C.I.E.; Sir Chunilal V. Mehta, K.C.S.I.; Sir H. P. Mody, K.B.E., M.L.A.; Sir Joseph Kay, Kt.; T. V. Baddeley; J. C. Burns; Dharamsey Mulraj Khatau; Hurgovandas Jammadas Ramji; Krishnaraj M. D. Thackersey; A. M. Mehta; H. F. Milne; Navinchandra Mafatlal; A. L. Paramor; A. Pether; S. D. Saklatvala, M.L.A.; F. Stones, O.B.E., M.L.C.; C. P. Wadia and Neville N. Wadia.

T. Maloney, (*Secretary*); N. S. V. Aiyer, (*Asst. Secretary*); R. G. Gokhale, (*Labour Officer*).

The following are the Association's Representatives on public bodies:—

Legislative Assembly: Sir H. P. Mody, K.B.E., M.L.A.

Bombay Legislative Assembly: S. D. Saklatvala, M.L.A.

Bombay Port Trust: T. V. Baddeley.

Victoria Jubilee Technical Institute: V. N. Chandavarkar.

Bombay Smoke Nuisances Commission: W. F. Webb and Mark Binnie.

Advisory Board of Sydenham College of Commerce and Economics: B. S. Dabke.

Indian Central Cotton Committee: S. D. Saklatvala, M.L.A.

Development of Bombay Advisory Committee: V. N. Chandavarkar.

G. I. P. Railway Advisory Committee:—Krishnaraj M. D. Thackersey.

B. B. & C. I. Railway Advisory Committee: Sir H. P. Mody, K.B.E., M.L.A.

Bombay Municipal Corporation: Sir H. P. Mody, K.B.E., M.L.A.

University of Bombay: V. N. Chandavarkar.

Royal Institute of Science: B. D. Benjamin.

The Office of the Association is located at 2nd Floor, Patel House, Churchgate Street, Fort, Bombay, and the Telephone Nos. are 31041 and 31042.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd. was registered on 30th June, 1924, as a company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (b) the insurance or members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter-insurances and counter-guarantees, etc., etc.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—

F. Stones, O.B.E., (*Chairman*.)

Sir Ness Wadia, K.B.E., C.I.E.; Sir Joseph Kay, Kt.; S. D. Saklatvala; H. J. Ramji; D. M. Khatau; A. Pether; J. C. Burns and A. C. M. Cursetjee, M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

- (a) To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.
- (b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- (c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- (d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- (e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.
- (f) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- (g) To undertake by arbitration the settlement of commercial disputes between merchants and business-men and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.
- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.
- (i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.
- (j) To secure the interests and well-being of the Indian business communities abroad.
- (k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.
- (ii) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.

(iii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(cr) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(7) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber has the right of electing one representative on the Central Legislative Assembly and under the Government of India Act 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, one representative on the Bombay Municipal Corporation and one representative on the Improvements Committee.

President for 1940—Chunilal B. Mehta.

Indian Sailors' Home Committee.—M. A. Master.

Board of the Bombay Telephone Co.—Vithaldas D. Govindji.

Sydenham College Advisory Board.—Hon. Sir Rahimtoola M. Chmow, Kt., Secretary.—J. K. Mehta, M.A., Assistant Secretary.—A. C. Ramalingam.

Bombay Piece-Goods Native Merchants' Association.

The objects of the Association are:—

(a) To promote, by creating friendly feelings and unity amongst the merchants, the business of the piece-goods trade in general at Bombay, and to protect the interests thereof; (b) to remove as far as it will be within the powers of the Association to do so, all trade difficulties of the piece-goods business and to frame such line of conduct as will facilitate the trade; (c) to collect and assort statistics relating to piece-goods and to correspond with public bodies on matters affecting the trade, and which may be deemed advisable for the protection and advancement of the objects of the Association or any of them; and (d) to hear and decide disputes that may be referred to the Association for arbitration.

The following are the office-bearers for the current year:—

Chairman,—Devidas Madhavji Thakersey, J.P.

Deputy Chairman—Purshottam Mulji Kapadia.

Hon. Joint Secretaries—Mathuradas Haribhai, J.P., and Palansey Damodar Govindji, J.P.

Hon. Treasurer,—Mulji Laxmidas.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and oil-seeds trade on a sound footing." It is an influential body with a large membership. Figures for the current year are:—

Chairman—Sheth Ratansi Hirji, J.P., *Vice-Chairman*, Sheth Khimji Shamji; *Hon. Secretary*,—Sheth Nathoo Cooverji; *Secretary*,—Ganpatram Narottam Raval.

The address of the Association is Masjid Bunder Road, Mandvi Post, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the city of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and the Indian States

in and about these, namely, Kolhapur (with its Jagirs), Sindi, Muraj, (Senior and Junior), Kurundwad (Senior and Junior), Jamkhandi, Sawantwadi, Mudhol, Ramdurg, Jarhi, Akalkot, Chattran, Aundh, Bhor, Surana, Jawhar and Jaingra.

President—M. I. Dahmalkar.

Vice-Presidents, D. R. Naik, J.P., G. V. Patil and Rao Subh P. I. Patil.

Secretary, D. V. Kolkar, M.A.

The office of the Chamber is situated in the Construction House, Witter Road, Ballard Estate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 50 per annum per set containing monthly Import and Export Statements and Non-Members Rs. 100 per set per annum; Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members, consisting of a chairman, Vice-Chairman and eight members, elected at the annual general meeting of the

Chamber as early in the year as possible. The Chamber elects a representative to the Sind Legislative Assembly, four representatives to the Karachi Port Trust, two to the Karachi Municipal Corporation and two to the North-Western Railway Advisory Committee. Karachi. There were 55 members of the Chamber in March, 1930. The following are the officers for 1929-30:—

Chairman—J. Humphrey, O.B.E.

Vice-Chairman—B. R. Graham.

Members of Committee—J. H. Blackwell, C.B.P., M.C., W. J. Cullen; A. A. Phillips, V.D.; Lt.-Col. W. B. Hossack, M.L.A.; H. K. C. Hare; J. J. Flockhart; R. H. Martin and S. E. White.

Secretary—H. M. Gomes.

Representative on the Sind Legislative Assembly :—Lt.-Col W. B. Hossack

Representatives on the Karachi Port Trust—
R. H. Martin, B. R. Graham, J. H. Blackwell, C. B. E., M.C. and H. K. C. Hare

Representatives on the Karachi Municipality—
W. F. Enever and Sorab K. H. Katrak.

Representatives on the North-Western Railway Local Advisory Committee, Karachi—A. J. Bebbington and B. R. Graham.

Public Mesurer : G. B. Potts

The following are the principal ways in which the Chamber gives special assistance to members :—The Committee take into consideration

and give an opinion upon questions submitted to them regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements or disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations and officials interested in the trade, commerce or industry in the Madras Province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at any ordinary meeting of the Chamber. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs. 100 provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in every 10 years. The subscription shall not exceed Rs. 300 per annum, payable quarterly in advance. Each affiliated member shall pay an annual subscription of Rs. 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks.

There are 47 Firms, who are Members of the Chamber, and there are 5 Affiliated Members and 8 Honorary Members of the Chamber in 1940. The officers and the committee of the Chamber for the year are as follows :—

Chairman—R. D. Denniston

Board of State Aid to Industries—F. H. Oakley

South Indian Nursing Association—F. H. Oakley.

Government General Hospital Advisory Committee—F. H. Oakley.

University of Madras—Employment Bureau—C. E. Gibbs and W. T. Williams

Madras Provincial Cotton Committee—B. W. Batchelor and J. Nuttall.

Indian Tea Market Expansion Board—J. C. Surry.

Ex-Servicemen Association (India) Madras Branch—D. M. Reid.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

“To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

“To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others.”

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber registers trade marks, holds survey and arbitration, issues certificates of origin and certificates of invoices.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1923. Members of the Chamber hold seats in the Madras Legislative Assembly and the Chamber has also been accorded the right of electing a representative to that body. Co-jointly with the Nattukottai Nagarathars' Association the Chamber has the right of elect-

ing a representative to the Federal Assembly. Under the Madras City Municipal Amending Act, 1926, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Board of Communications, the Provincial Cotton Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospitals, Income-tax Board of Referees, the Madras Marketing Board, the Madras City Excise Licensing Board, the Indian Tea Marketing Expansion Board, etc. The Chamber issues a monthly magazine entitled “Southern India Commerce.”

The Chamber has about 420 members on the rolls and has its own building. Several Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President—Khan Bahadur Adam Hajee Mohamed Sait.

Vice-Presidents—Rao Bahadur C. Gopal Menon and M. Kuppuswami Pillai.

Secretary—P. Raghavan Nair, B.A., B.Com.

NORTHERN INDIA.

“COMMERCE HOUSE,” LAWRENCE ROAD, LAHORE.

The Northern India Chamber of Commerce was founded in 1923 and has its headquarters at Lahore. The business of the Chamber is conducted by the Chairman, and a Committee consisting of a minimum of eight elected members, and a maximum of three co-opted members.

It has the right of representation on the Communications Board, Punjab; the Joint Development Board Punjab; the North-Western Railway Advisory Committee, Lahore Branch; the Managing Committee of the Bailey College of Commerce, Lahore; Board of Economic Enquiry, Punjab; Michigan Engineering College Advisory Council Lahore; Board of Industries, Punjab; Electricity Board, Punjab; Industrial Survey Advisory Committee, Punjab; Punjab Legislative Assembly, and also nominates a panel for the Railway Rates Advisory Committee.

The Chamber is affiliated with the Associated Chambers of Commerce of India, and with the Federation of Chambers of Commerce of the British Empire, London.

A Tribunal of Arbitration has been set up, under the Rules of which arbitration relating to commercial disputes are carried out on behalf of members and non-members. Surveys of

merchandise are also frequently held. A Trade Mark Register is maintained for the registration of trade marks, business names, and labels. Certificates of origin are issued for goods manufactured in India. A set of tested weights is kept for testing weights of members and non-members.

The aim of the Chamber is to protect and further commercial, industrial and agricultural interests in Northern India by every possible means and it is the constant endeavour of the Chamber to achieve as much as possible for the good of the common interest of members—the business prosperity of Northern India.

Chairman :—Rai Bahadur Pandit Balak Ram Pandya.

Vice-Chairman :—J. C. F. Davidson.

Committee :—Rai Bahadur L. Binda Saran, M.L.A.; C. D. Buckley; F. W. V. Elvers; E. S. Farley; P. H. Guest; F. R. Hawkes, C.B.E.; Dewan Bahadur Dewan Krishna Kishore Dharwala; E. C. Osborn; Hon'ble Rai Bahadur L. Ram Saran Das, C.I.E., M.C.S.; Sir William Roberts, Kt., C.I.E., M.L.A.; Rai Bahadur Seth Ram Rattou, Sardar Sahib Sardar Sapuran Singh Chawla

Tel. Address.—"Commerce."

Telephone.—2237.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees

of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 66 members, three honorary members and eight affiliated members.

The following are the officers:—

President.—R. Menzies, D.B.E., V.D.

Vice-President.—C. W. Tush.

Members.—A. H. Buckland, A. C. Inskip, O.B.E., E. J. W. Plummer, Rai Bahadur Babu Ram Naram, T. I. Smith, A. Grant, E. H. N. Lowther, and Sardarinder Singh.

Representative on the United Provinces Legislative Assembly.—Sir Jwala Prasad Srivastava Kt., and E. M. Souther, C.I.E.

Secretary.—H. W. Morgan.

MERCHANTS' CHAMBER OF UNITED PROVINCES, CAWNPORE.

The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership,

Cotton Mills Sugar Mills, Jute Mills, Silk weaving and Hosiery works, Banks and Firms engaged in extensive dealings in Piece-goods, country produced Hide and Leather. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to its members who are scattered over the entire

province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U. P. Legislative Assembly, U. P. Board of Traffic and Communication, Court of the Lucknow University, G. I. P. Rly. Advisory Committee, and about 15 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies

Act 1913, with a license under Section 26, provides for an Executive consisting of 1 President, 2 Vice-Presidents and 18 ordinary Members of the Council. A whole-time Secretary is attached to the organisation.

President.—Ram Ratan Gupta.

Senior Vice-President.—Guru Prasad Kapur.

Junior Vice-President.—H. G. Misra.

Secretary.—Mr. K. M. Purkayastha, M.A.

UNITED PROVINCES CHAMBER OF COMMERCE, CAWNPORE.

The United Provinces Chamber of Commerce was established in 1914, and represents all the important commercial and industrial interests of the Province. The Chamber is recognised both by the Provincial and Central Governments and jointly returns a representative to the United Provinces Legislative Assembly. It is represented on the Cawnpore Municipal Board, the Local Advisory Committee of the East Indian Railway, Great Indian Peninsula Railway, Rohilkhand Kumaon Railway, Bengal and North Western Railway and on the Informal Committee of the East Indian Railway. The Chamber's representatives also sit on the Provincial Boards of Industries, Economic Enquiry and Agriculture, High School and Intermediate Education and Governing bodies of Government

Textile and Dyeing and Printing Schools, Agricultural College, Sir H. B. Technological Institute, Cawnpore, Board of Traffic and Communications, Senate of the Lucknow University, and Employment Board, U. P. and various other public bodies in the Province. The Chamber is affiliated to the Federation of Indian Chambers of Commerce and Industry as also to the National Committee of the International Chamber of Commerce.

Membership.—Any firm, individual, company, corporation or association engaged or interested in trade, commerce or industry is eligible for membership of the Chamber.

The number of members on register is 180 (115 Local and 65 Mofussil).

INDIAN CHAMBER OF COMMERCE, LAHORE (PUNJAB).

The Indian Chamber of Commerce (Desai Beopar Mandal), Lahore, was established in 1912 and was registered under the Indian Companies Act, 1882, in 1913. The main object for which the Chamber was established was to safeguard the interests of Indian commerce, trade and industry. It is recognised by the Government of India and the Federation of Indian Chambers of Commerce and Industry and is a member of the International Chamber of Commerce, Paris. The Chamber has a trademarks registration department and has a Board of Arbitration to settle commercial disputes.

The members of this Chamber have franchise in the commerce constituency of the Punjab Legislative Assembly along with three Chambers—The Punjab Chamber of Commerce, The Northern India Chamber of Commerce, Lahore, and Punjab Trades Association.

Members of the Committee for 1939 are:—

President.—Vacant.

Vice-President.—H. D. Mehra, Managing Director, Northern India Insurance Co., Ltd., Lahore.

Hon. Secretary & Member of the Committee.—Sirdar P. S. Sodhbans F.R.A., (Lond.), R.A., of Messrs. Sodhbans & Co., Auditors, Lahore.

PUNJAB.

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North West Frontier Province and Kashmir. The Chamber has Branches at Amritsar and Lahore. Memberships by ballot and is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Re. 1 and the rate of subscription Rs. 180 per year. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association, and shares representation in the Indian Legislative Assembly with other Chambers which are members of the Associated Chambers of Commerce of India, in the seat allotted to the Associated Chambers. The Chamber is a member of the Federation of Chambers of Commerce, London. The Chamber is represented on the Municipal Corporation of Delhi as well as on the N. W. Railway Advisory Committee, Lahore.

Members of the Managing Committee, 1940-41.—R. N. B. Brunt, *Chairman*, (Messrs. Burmah Shell Oil Storage & Distributing Co., of India, Ltd., New Delhi); Rai Bahadur P. Mukerjee,

Secretaries.—Messrs. A. F. Ferguson & Co., Chartered Accountants, New Delhi.

BURMA.

The Burma Chamber of Commerce, with headquarters at Rangoon, exists to encourage friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect trade, commerce and manufactures and, in particular, the general mercantile interests of the province, to communicate with public authorities, associations and individuals on all matters, directly or indirectly affecting these interests, and to provide for arbitration between parties willing to refer to, and abide by, the judgment of arbitrators appointed by the Chamber. The following are affiliated bodies:—

Burma Fire Insurance Association.

Burma Marine Insurance Agents' Association.

Burma Motor Insurance Agents' Association.

Burma Planters' Association.

Tavoy Chamber of Mines.

The Chamber elects representatives to the following Public Bodies:—

Burma House of Representatives.

Rangoon Port Trust Board.

Rangoon Corporation.

Victoria Memorial Park Trustees.

Pasteur Institute Committee.

Burma University Council.

Rangoon Development Trust.

Police Advisory Board.

Advisory Committee constituted under the Auxiliary Force Act, 1920.

Rangoon General Hospital Advisory Committee.

Burma Railway Board.

Bishop Bigandant Home Board.

All British corporations, companies, firms or persons engaged or interested in mercantile pursuits, such as merchants, bankers, ship-owners and brokers or who are connected with agriculture, mining, manufactures, insurance railways, commerce, art, science or literature

are eligible to become Chamber Members. Every non-British concern or person, similarly engaged or interested as indicated above, is eligible for election as an Associate Member. The annual subscription for each Chamber Member is Rs. 450 per annum and of each Associate Member Rs. 360 per annum. An entrance fee of Rs. 150 is payable by each new Member. Official and others indirectly connected with the trade or the province or who may have rendered distinguished service to the interests represented by the Chamber may be elected by the Committee either on their own motion or on the suggestion of two Members as Honorary Members of the Chamber. Honorary Members are not required to subscribe to the funds of the Chamber.

The Chamber undertakes arbitrations in addition to its ordinary work. It does not publish any statistical returns.

Secretary—B. P. Crustall.

Asst. Secretary—G. V. Hemans.

Representatives on the Burma House of Representatives—L. P. S. Bonthu, The Hon. Somerset Butler, J. I. Nelson, A. F. McCraith, and G. E. J. Robertsall.

Police Advisory Board—T. P. Cowie, M.H.R.

Rangoon Development Trust—G. S. Nicoll.

Bishop Bigandant Home Board—J. R. Gardiner.

Burma Railway Board—A. A. Bruce.

Advisory Committee under the Auxiliary Force Act, 1920—J. R. Fairley.

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber, which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras:—

Members.—The Coromandel Co., Ltd.; Ripley & Co.; Gordon, Woodroffe & Co., (Madras) Ltd.; Wilson & Co.; Best & Co., Ltd.; Burmah-Shell Oil Storage and Distributing Co. of India Ltd.; The Agent, Imperial Bank of India Ltd.; The Decan Sugar and Alkali Co. Ltd.; Samalkot & Purry & Co., Ltd., Vizagapatam.

MEMBERS OF THE COMMITTEE.

S. A. Chee-man (*Chairman*).

A. S. Watt.

C. C. R. Reynolds.

Mr G. M. Lake (*Secretary*).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cooanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. Subscription for members whose place of business is in Cooanada, Rs. 120

per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, and is administered by the Director-General of Commercial Intelligence and Statistics assisted by a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade, which may be of use to Indian firms and (b) the compilation and publication of All-India statistics.

The Government of India felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they established in 1933 the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. This Bureau has now been placed in charge of the Economic Adviser to the Government of India appointed in 1935 with a Deputy-Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes:—Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests, (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communiques and other notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, price and trade movements of the staple exports and

imports, (g) trade enquiries for securing trade introductions, and (h) monthly, quarterly and annual reports of the Indian Trade Commissioners abroad and summaries of the leading features of consular and other trade reports.

The Review of the Trade of India and the monthly Survey of business conditions in India are now being published by the Statistical Research Bureau.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence and Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 19,628 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 360 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with the Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Milan, Osaka (Japan), Mombasa (East Africa), New York and Alexandria and the Indian Trade Agent, Kabul, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and

exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is a policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commer-

cial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres, to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges through-

out the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

H. M.'S. TRADE COMMISSIONERS IN INDIA

Calcutta—

Sir Thomas M. Amseough, C.B.E.

His Majesty's Senior Trade Commissioner in India, Burma and Ceylon.

Mr. A. Schofield,

His Majesty's Trade Commissioner at Calcutta

Post Box No. 683, Fairlie House, Fairlie Place

Telegraphic Address—"Tradecom, Calcutta"

Telephone No.—"Calcutta 1042."

Bombay—

Mr. W. D. M. Clarke,

His Majesty's Trade Commissioner at Bombay.

Post Box No. 815, 3, Wittet Road, Ballard Estate

Telegraphic Address—"Tradecom, Bombay."

Telephone No.—"Bombay 23095."

Burma—

Imperial Trade Correspondent, Dept. of Commerce and Industry, Secretariat, Rangoon.

Ceylon—

Imperial Trade Correspondent, Director of Commerce and Industries, Colombo.

THE CANADIAN COMMERCIAL INTELLIGENCE SERVICE.

The Canadian Department of Trade and Commerce comprises, as one of its principal divisions, the Commercial Intelligence Service. This Service had its beginnings prior to the establishment of the Department in 1892 and has since undergone considerable expansion. At present it includes a headquarters staff in Ottawa and thirty-four Trade Commissioner offices abroad, seventeen of these being in British and an equal number in foreign countries.

The office of the Canadian Trade Commissioner for India, Burma and Ceylon was established in Calcutta in 1922 and was transferred to Bombay on April, 1940. Its services are at the

disposal of Canadian firms interested in the export of their goods to the Indian market and to others who may be interested in the purchase of Indian products. It is also in regular touch with import houses in India and is prepared to co-operate as well with exporters seeking a market in Canada for any Indian commodities.

Canadian Government Trade Commissioner in India, Burma and Ceylon.—Mr. Paul Sykes, Gresham Assurance House, Mint Road, Bombay, P. O. Box 886. Telephone—20672, Tel. Address:—"Canadian, Bombay."

THE INDIAN CENTRAL COTTON COMMITTEE.

Office.—Nicol Road, Ballard Estate, Bombay.

Secretary.—Mr. D. N. Malha, B.A. (Oxon).

Asst. Secretary—Mr. C. J. Bocarro, M.A.

Director, Technological Laboratory.—Dr. Nazir Ahmad, O.B.E., M.Sc., Ph.D., F.Inst.P.

The Indian Central Cotton Committee was constituted by the Government of India in March 1921, as a result of the recommendation of the Indian Cotton Committee of 1917-18. Originally the Committee was purely an advisory body but with its incorporation under the Indian Cotton Cess Act in 1923, it became an administrative body having at its disposal funds for the improvement and development of the growing, marketing and manufacture of cotton in India. The funds of the Committee are derived from the Cotton Cess of two annas per bale (four annas for the first three years) which was imposed in 1923. Having complete control over its funds, the Committee has been able to build up a satisfactory reserve and is at present spending over Rs. 10 lakhs per annum on cotton improvement, mainly on agricultural and technological research and seed distribution schemes.

The activities of the Committee now extend to all branches of cotton improvement in India, and, as an authoritative body to advise the Central and Provincial Governments on important matters of cotton policy, it has attained an outstanding position. Briefly, the Committee may be described today as 'Information Bureau' for everything pertaining to Indian cotton. The Committee provides funds for research into cotton problems of all kinds, importance and for the development, extension and marketing of improved varieties of cotton. The aim, however, has always been to supplement and not supplant the work of the Agricultural Departments in the cotton growing provinces and Indian States. Including as it does representatives of growers, agricultural officers, traders, spinners and manufacturers, it has been an invaluable forum for the discussion of many problems of general concern. A list of the members constituting the Committee and the various interests they represent as on 31st August 1939 is given below.—

MEMBERS OF THE COMMITTEE.

President.—P. M. Kharegat, C.I.E., I.C.S., Vice-Chairman, Imperial Council of Agricultural Research, *ex-officio*.

(a) Dr. W. Burns, C.I.E., Agricultural Commissioner with the Government of India, *ex-officio*.

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS

Madras.—P. H. Rama Reddi, I.A.S., Director of Agriculture.

Bombay.—The Director of Agriculture.

United Provinces.—The Director of Agriculture.

Punjab.—The Director of Agriculture.

Central Provinces & Berar.—The Director of Agriculture.

Sind.—Rao Saheb K. I. Thadani, Director of Agriculture.

The Director-General of Commercial Intelligence and Statistics, *ex-officio*.

REPRESENTATIVES OF CHAMBERS OF COMMERCE AND ASSOCIATIONS.

The East India Cotton Association, Sir Purshotamdas Thakurdas, C.I.T., M.B.E.

The Bombay Millowners' Association, S. D. Saklatvala, M.L.A.

The Bombay Chamber of Commerce, M. S. Durutti.

The Indian Merchants' Chamber, Chandulal P. Parikh, M.L.A.

The Karachi Chamber of Commerce, A. P. Darlow.

The Ahmedabad Millowners' Association, Kasmulhai Lalbhai.

The Tuticorin Chamber of Commerce, J. Vonesh.

The Upper India Chamber of Commerce, Captain S. R. Pocock, M.C., M.L.A.

The Empire Cotton Growing Corporation, Sir William Roberts, C.I.E., M.L.A.

COMMERCIAL REPRESENTATIVES NOMINATED BY CENTRAL GOVERNMENT.

Central Provinces and Berar.—Rao Saheb P. V. Deshmukh; Y. G. Deshpande.

Madras.—G. A. Rambridge.

Punjab.—Balak Ram.

Benaul representatives.—Girija Prasanna Chakraverty.

CO-OPERATIVE BANKING REPRESENTATIVE

Sh Chinnilal V. Melita, K.C.S.I. (*Vice-President*).

REPRESENTATIVES OF COTTON-GROWING INDUSTRY.

Madras.—V. C. Palaniswami Gounder, M.L.A.; H. Sitarama Reddy, M.L.A.

Bombay.—Yashwantram Rajaram Joshi; Mangesh Babhuta Patel, M.L.A.

United Provinces.—Chaudhari Shivamangal Singh, M.L.A.; Rai Bahadur Kunwar Laxmiraj Singh, M.L.C.

Punjab.—Sardar Bahadur Gurbachan Singh, M.L.A.; Ch. Mohammad Yasin Khan, M.L.A.

Central Provinces and Berar.—Rao Bahadur Sir Madhwarao Deshpande, K.B.E., Sugachand Tapadia.

Sind.—Roger Thomas.

REPRESENTATIVES OF INDIAN STATES

Hyderabad State—Nizam-ud-Din Hyder, Director of Agriculture.

Baroda State.—R. G. Allan, C.I.E., Commissioner of Agriculture.

Gwalior State.—Lt. Sardar D. K. Jadhav, Director of Agriculture.

Rajputana and Central India States—T. R. Low, I.A.S.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL

Rao Bahadur S. S. Salimath, Deputy Director of Agriculture, Southern Division, Dharwar; E. G. Rama Iyer, Director of Agriculture in Mysore, Bangalore; Rao Bahadur V. Ramanaatha Ayyar, Cotton Specialist, Coimbatore; Rai Bahadur S. V. Kannungo, Revenue Minister, Holkar State, Representative of the Holkar State; Seth Isserdas Varindmal, M.L.A., Representative of the Karachi Indian Merchants' Association; Dr. B. L. Sethi, Economic Botanist (Cotton & Rabi Cereals) to the Government of United Provinces, Cawnpore; The Hon'ble Mr. V. Ramadas Pantulu, President, Madras Provincial Co-operative Bank, Madras. Lala Shri Ram, Representative of the Cotton Mill-owners' of Delhi; Chellaram Shewaram, Representative of the Karachi Cotton Association Ltd.; Dewan Bahadur Sir T. Vijayaraghavacharya, K.B.E.; H. B. Rajdev, Deputy Director of Agriculture, Karnatak Division, Raichur. Sardar Rao Bahadur Bhumbhai R. Naik, Sagrapura, Surat; Dr. T. E. Gregory, Economic Advisor to the Government of India.

Amongst the research schemes of the Committee, plant breeding schemes for the improvement of quality naturally take pride of place. The agencies employed by the Committee for its research work have varied little in character since 1923, though they have grown in number. It continues to maintain a Technological Laboratory at Bombay which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. A new feature is the addition to the Laboratory of a Testing House which is recognised by the B.I.S.F.A. It also provides a large proportion of the funds for the Indore Institute of Plant Industry.

For a considerable period the Committee restricted its grants to agricultural research, but in 1930 it was decided that the time had come to add its support to the efforts already being made to bridge the gap between the experiment station and the cultivator and to supplement the funds which the Agricultural Departments were devoting to the introduction of improvements into agricultural practice.

Special attention from that time began to be devoted to seed introduction schemes.

The Committee has not stopped at the production of better cotton, but from its inception has devoted special attention to better marketing to the prevention of adulteration and other abuses and to many other problems connected with the cotton trade of the country. Regulated Cotton Markets existed in Barar before the establishment of the Committee, and that system which had stood the test of time was commended with certain modifications for general adoption. Regulated Cotton Markets have now been established in Bombay, Central Provinces, Madras, Hyderabad and Indore. Similarly, on the recommendation of the Committee, the Cotton Transport Act was passed in 1923 by which Provincial Governments are empowered to exclude from any specified area cotton, kapas or seed from outside unless required for a special purpose and covered by a license. Prior to the passing of this Act, inferior cottons used to be imported in large quantities into the staple cotton tracts for purposes of adulteration, to the detriment of the reputation of several valuable cottons. The Act is now in force in almost all the important staple cotton areas of Bombay, Madras and the Central Provinces as well as in Baroda, Rajpipla, Chhota Udepur, Hyderabad and Indore, etc. In 1925, on the recommendation of the Committee, the Cotton Ginning and Pressing Factories Act was passed. This provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. Recently the Act has been used for the prevention of watering and for the mixing of non-cotton articles with cotton. The Committee has also taken steps to bring to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale.

It may be stated without hesitation that, as a result of the efforts of the Committee, the last sixteen years have seen a marked change in the character of the Indian crop, particularly in the percentage of short and medium staple. Equally important is the result of agricultural research and its application to the yield of cotton per acre. The average yield per acre in the quinquennium 1912-17 for the whole country is 11% higher than for the quinquennium 1927-32, despite the fact that in two years of the last quinquennium the cotton crop in some important areas was seriously damaged by abnormal weather conditions. The ascertained area under improved cotton is now about 22% of the total. The ultimate ideal is to encourage the establishment of single variety tracts wherever agricultural conditions and the limitations of irrigation supply and soil make this possible.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association, Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October, 1932. With effect from 1st November, 1932, the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Sir Purshotandas Thakurdas, Kt., C.I.E., M.B.E., (*President*), Handas Madhadas, (*Vice-President*), Sellers' Panel, Jannadas Ramdas, Fatechand Jhunjhuniwala, Hanraj Jivandas, (*Sellers' Panel*) J. Vonesch, J. R. Kay, Ramdas Kulkhand, C. Shuttleworth, (*Buyers' Panel*), Ramdeo A. Podar, Ratilal T. Thakkar, Unadutt Surajmal Nemani, Madanlal Palani, Binasulal Basantlal Seksaria, Premchand Kedhi (*Brokers' Panel*), K. S. Patil, B.A., LL.B., M.L.A., Dr. V. H. Patil, M.S.C. Ph.D., (*Cotton Growers' Representatives*) Nominated by the Government of Bombay; Sardar Rao Bahadur Bhimabhai R. Naik, Sardar Bahadur Gur Bachan Singh H. Sitaram Reddy, B.A., B.L., M.L.A., (*Cotton Growers' Representatives*) Nominated by the Indian Central Cotton Committee

Officers.

C. M. Parikh, B. Com., *Secretary*; A. R. Meneses, *Deputy Secretary and Manager, Clearing House* and S. A. P. Ayar, *Assistant Secretary*.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton

Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user, whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the cotton trade; to establish just and equitable principles in the trade and to maintain uniformity of control; to fix or adopt standards of classification of cotton; to acquire, preserve and disseminate useful information connected with the cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the cotton trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted; to establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House; to regulate the handling and exportation of cotton from India and the importation of cotton into India in so far as it may be imported; to bring, prosecute, or defend, or aid in bringing, prosecuting, or defending, any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of making of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, a large Trading Hall on the lines of Liverpool and New York Exchanges, Survey Rooms, Appeal Rooms, etc.

The Association has another fine Building, "The Cotton Exchange" at the corner of Sheikh Memon Street and Kalbadevi Road, wherein trading in "forward" contracts is conducted. It comprises of a basement, a ground floor (Trading Hall) with two galleries and six other upper floors. There are 114 telephone cabins for members on the ground floor and the galleries. The top floor accommodates the administrative offices of the Association and the Clearing House, and the remaining five floors contain 113 rooms for members' offices.

The Association has a membership of 415.

The Bombay Cotton Annual containing matters relating to every branch of the trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 523,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and

induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1938-39, the total area in all territories reported on was computed at 23,553,000 acres and the total estimated outturn was 5,120,000 bales of 400 lbs. as compared with 25,746,000 acres and 5,779,000 bales in 1937-38.

Bombay, Punjab, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop:—

Provinces and States.	1937-38. (Provisional Estimates).		1938-39. (Provisional Estimates).

Bombay is the great centre of the cotton trade. The principal varieties are Bholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatore and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection; hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to lighten the

whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use of sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years :—

	1935-36.	1936-37.	1937-38.	1938-39.

FOREIGN TERRITORY.				
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwalior (Ujjain), Kishan-zarh, Cambay, Kolhapur, Cochin, Rajkot, Ratlam, Travancore (a) and the French Settlements at Pondicherry ..	155,047,779	163,532,644	185,097,311	199,215,626
GRAND TOTAL	1,059,286,738	1,054,116,664	1,160,296,534	1,303,249,502

(a) Figures for Travancore are being reported from October 1934.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 58 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 11 per cent. and 15 per cent., while Bengal and the Central Provinces produced 4 and 5.5 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay island :—

*Excluding Burma.

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produced in 1938-39 nearly 65·2 per cent. of the cloth woven in India. The United Provinces produced 5·6 per cent., the Central Provinces 2·1 per cent. and Madras 1·8 per cent. Grey and Bleached goods represent nearly 78·10 per cent. of the whole production.

ANALYSIS OF WOVEN GOODS.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Indian States:—

—	1934-35.	1935-36.	1936-37.	*1937-38.	*1938-39.
Grey and Bleached piece-goods—					
Pounds ..	570,722,200	587,922,936	604,535,718	667,184,995	713,797,320
Yards ..	2,641,654,065	2,773,491,923	2,761,765,472	3,190,647,392	3,337,129,086
Coloured piece-goods—					
Pounds ..	147,466,140	152,872,906	154,663,112	169,197,040	178,411,755
Yards ..	755,801,981	797,873,935	810,221,627	893,628,971	932,140,413
Grey and coloured goods other than piece-goods—					
Pounds ..	3,703,737	5,119,105	5,144,770	6,158,207	6,486,560
Dozens ..	930,523	1,291,250	1,188,139	1,517,358	1,426,613
Hosiery—					
Pounds ..	4,718,435	5,237,474	6,466,609	7,496,087	7,531,675
Dozens ..	1,481,708	1,642,348	2,085,654	2,445,619	2,414,385
Miscellaneous—					
Pounds ..	6,208,320	5,673,448	5,577,656	6,013,110	7,184,622
Cotton goods mixed with silk or wool—					
Pounds ..	3,830,265	4,676,151	5,928,016	8,155,602	7,863,873
Total—

* Year ending 31st August.

† Excludes Burma and Ceylon.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day. It is now about 5,500 tons a day of 10 working hours, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits on Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of reed, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Fort Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Ruston & Prosser Co. (registered by Messrs. Ruston & Prosser, Ltd.)), and in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustonjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatti, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrath mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started.—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Aratboon, Anglo-India, Standard, National, Delta (which absorbed the Serajunge), and the Kinnison. A full of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions.—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukmichand, Birla, Shree Hanuman, Gagaihal, Fremchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

The record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews the number of Mills, capital invested, number of looms and spindles employed in the industry in the various Provinces from 1928-29 to 1937-38 :—

Province.	No. of Mills.	Authorised Capital Rs., £. and \$	Paid-up Capital Rs. £. and \$	Number of	
				Looms.	Spindles.

† Capital of one mill not stated.

(a) Capital of two mills not stated.

(b) Includes one mill in French Settlements.

(c) The mill is situated in Raigarh State.

(d) Capital of one mill not stated as it has other branches of business for which capital cannot be distinguished.

Jute and Jute Manufactures.—The total exports of raw and manufactured jute during the year 1938-39 amounted to 1,647,000 tons as compared with 1,768,000 tons in 1937-38, a decline of 7 per cent. The value of these shipments also fell by 10 per cent. from Rs. 43.80 lakhs to Rs. 39.66 lakhs. Both raw and manufactured groups showed decreases. The following table shows the exports of raw jute and manufactured goods during the past four years.—

	Exports of raw jute.	Exports of sacking bags and cloth.	Exports of hessian bags and cloth.
	Tons (000)	Tons (000)	Tons (000)
1935-36 ..	771	438	354
1936-37 ..	821	519	488
1937-38 ..	747	523	478
1938-39 ..	690	488	450

Exports of raw jute declined in quantity from 747,000 tons in 1937-38 to 690,000 tons in 1938-39, and in value from Rs. 14.72 lakhs to Rs. 13.40 lakhs. The United Kingdom and France increased their purchases from 145,000 tons, and 65,000 tons to 181,000 tons and 76,000 tons respectively, while Germany reduced her takings from 143,000 tons to 132,000 tons. Exports to Belgium and the Netherlands were smaller than those in the preceding year and amounted to 51,000 tons and 13,000 tons as against 55,000 tons and 19,000 tons, respectively, in 1937-38, while shipments to Czechoslovakia advanced from 3,000 tons to 21,000 tons. Italian jute mills were forced to use a percentage of lower grade hemp instead of jute and this resulted in the falling off of demand from that country from 73,000 tons to 46,000 tons. There was also a marked decline in the exports to the United States of America which amounted to 31,000 tons as compared with 99,000 tons in 1937-38. Exports to Brazil, Japan and the Argentine Republic were almost on the level of the preceding year and amounted to 25,000 tons, 15,000 tons and 10,000 tons, respectively. Exports to China, including Manchuria, totalled 19,000 tons or about 4,000 tons more than in 1937-38.

As might be expected from restrictions on mill production, the Indian consumption of raw jute showed a decline in 1938-39 as compared with the preceding year. The following table shows the exports and Indian consumption of raw jute in the last five seasons, July to June.

	Exports of raw jute.	Consumption in India*	Excess of Consumption over exports (%).
	Tons (000)	Tons (000)	
1934-35 ..	783	818	+4
1935-36 ..	740	895	+21
1936-37 ..	872	1,082	+24
1937-38 ..	666	1,194	+79
1938-39 ..	693	1,112	+60

*Figures refer to mills in the membership of the Indian Jute Mills Association.

Exports of jute bags and cloth in the past three years were as under :—

	1936-37	1937-38	1938-39.
Bags (in millions)	621	612	598
Cloth (in million yards)	1,710	1,643	1,550

The total shipments of gunny bags in 1938-39 numbered 598 million as compared with 612 million in the preceding year. The value of the shipments also declined from Rs. 13.17 lakhs to Rs. 12.46 lakhs. Of the exports in 1938-39, sacking bags accounted for 455 million valued at Rs. 10.45 lakhs and hessian gunny bags, 143 million valued at Rs. 2.00 lakhs. There was an increase in the shipments, chiefly under hessian gunny bags, to the United Kingdom which numbered 75 million as compared with 62 million in 1937-38, the value realised, however, showing a decline from Rs. 1.14 lakhs to Rs. 1.10 lakhs. Exports to other European countries taken together totalled 36 million in number as compared with 38 million in 1937-38. Next to the United Kingdom, the largest purchaser of Indian gunny bags was Australia, which took 66 million bags in 1938-39 as against 67 million in the preceding year. Burma came next with 62 million as compared with 51 million in 1937-38. Java, Thailand and Indo-China each took 23 million bags in 1938-39, shipments to those countries having numbered 35 million, 13 million, and 24 million, respectively, in 1937-38. Exports to African territories were smaller than in the preceding year. The Union of South Africa took 28 million as against 30 million bags in 1937-38 and West African territories, e.g., Nigeria, Gold Coast, Belgian Congo, French and Portuguese West Africa, etc., required 13 million bags as compared with 33 million bags in the preceding year. Exports to the United States of America declined from 19 million to 11 million. There were also smaller shipments to the West Indies, including Cuba, which amounted to 31 million in number as against 35 million in 1937-38. Exports to the Argentine Republic were on the level of the preceding year and amounted to 2 million in 1938-39; Chile and Peru together required 16 million—almost the same as in the preceding year. Exports to New Zealand and Hawaii were smaller than those in the preceding year and numbered 13 million and 15 million, respectively.

The total quantity of gunny cloth exported fell from 1,643 million yards valued at Rs. 15.37 lakhs in 1937-38 to 1,550 million yards valued at Rs. 13.34 lakhs in 1938-39, of which hessian gunny cloth represented 1,507 million yards valued at Rs. 12.83 lakhs as compared with 1,600 million yards valued at Rs. 14.85 lakhs in 1937-38. As usual, the United States of America was the largest purchaser, but she reduced her takings from 954 million yards to 841 million yards. There were, however, increased shipments to the Argentine Republic, which took 291 million yards as against 237 million yards in 1937-38. Shipments to the

United Kingdom also rose from 158 million yards to 171 million yards; while those to Canada, fell from 102 million yards to 89 million yards. Egypt required 9 million yards, about 2 million yards less than in the preceding year. There was a considerable decline in the shipments to Uruguay and the Straits Settlements, which amounted to nearly 6 million yards and 5 million yards in 1938-39 as compared with 21 million yards and 20 million yards, respectively, in the preceding year. Peru and the Philippines took 3 million yards and 23 million yards, respectively—almost the same as in the preceding year. The Union of South Africa required 10 million yards and Australia and New Zealand together 35 million yards,—these being almost the same as the corresponding figures for the preceding year.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new mills, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1900. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours. Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral snasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. It is about 20 years now that the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view

to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent. of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent. of the total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not instal any extra productive machinery or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent. of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent. of looms being unsealed on 1st May 1935, 2½ per cent. on 5th August and 2½ per cent. on 11th November. The remaining 5 per cent. of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Pirmehandi, Craig, Waverley, Meena and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and mills were at liberty to work whatever hours and install whatever machinery they desired; in 1938 the position was reviewed and a new short time working agreement was proposed to take effect from the 15th March, 1939, whereby member mills agreed to hours of work which would not be less than 40 nor greater than 54 per week. A supplementary agreement was entered into with effect from the 31st July, 1939, by which the mills worked 45 hours per week with 20% Hessian and 7½% Sacking looms sealed. This was the position at the outbreak

of the present war, after which large government orders for sandbags and a heavy overseas demand necessitated increased production; there restriction on working hours was withdrawn and all mills went into full production at 60 hours per week.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notice of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave the required notice and the agreement terminated on the 31st March 1936.

Indian Central Jute Committee.—A Central Jute Committee has been constituted by the Government of India with 26 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture, which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

The functions of the Committee include agricultural, technological and economic research, the improvement of crop forecasting, or production, of testing, and of distribution of improved seed; enquiries and recommendations relating to banking and transport facilities and transport routes; improvement of marketing in the interests of the jute industry, and collection and distribution of all relevant information on Jute.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it.

The Offices of the Committee are situated at 1, Council House Street, Calcutta. *President (Ex-officio)*: P. M. Khareghat, C.I.F., I.C.S. (Vice-Chairman, Imperial Council of Agricultural Research); *Secretary*: D. L. Muzumdar, M.A. (Cal); B.A. (Cantab), I.C.S.

Agricultural Research—The Research Laboratories have been Manipur Farm of the Director of : Bengal, at Dacca, and have been in full working order since June last year. The staff there have completed a survey of previous work on jute in the agricultural field and have made satisfactory progress with their research programme. An important part of this work is the study of fungal and insect pests, including the comparative resistance of various strains of jute and the effect of various manurial treatment on resistance.

The analysis of retting water from various districts is also in progress with the object of ascertaining which types of water yield the best results.

Technological Research.—The Technological Research Laboratories at Tollygunge have made considerable progress with spinning tests under standard conditions of temperature and humidity and when sufficient data have been collected, it will be possible to judge very accurately the value of the fibre and its suitability for use in various types of yarn. A study is being made of the various measurable chemical and physical characters of the fibre and their relation to spinning quality, which will lead towards the establishment of scientific methods of grading.

In co-operation with the Indian Jute Mills Association experiments are in progress to find out the moisture content of various types of jute in equilibrium with atmospheres of various relative humidities. The result of this combined effort will, it is hoped, give the information required for specifying acceptable standard figures for moisture regain.

It is under consideration whether the necessary extra equipment and accommodation should be provided to carry out experiments on the spinning of fine jute yarns and yarns of jute blended with other fibres, such as flax, and also on weaving, in the hope of discovering new and extended uses for jute goods.

The programme of work to be carried out in the Laboratories includes examination of typical samples representing the various physical and chemical characters and trade classifications. In the spinning laboratories an attempt will be made in the beginning to determine the minimum size of sample which will give reliable information regarding spinning behaviour and yarn quality. It is also proposed to have an investigation at an early date of the influence of certain valuable factors (machine speeds, etc.), on yarn quality in order that the degrees of control necessary in the various operations of a standard process may be determined. When this has been done, a standard process suitable for comparing the quality of small samples of fibre will be available, and it will be possible to proceed with the work of correlating spinning quality with measurable characters and the testing of new strains, etc.

One of the main functions of the technological research scheme is the testing of strains of jute produced by the agricultural research staff of the Committee and samples received from other sources.

Marketing and Transport—The Committee's marketing section has collected extensive information regarding the marketing and transport of jute. The first marketing report is complete and awaits publication. This will prove interesting and instructive reading.

Jute Forecast—Work on the Jute Census scheme is well advanced, and if the results of the random sampling survey of eight districts planned for the 1940 crop are satisfactory, it is anticipated that all the information necessary for the carrying out of a full provincial survey on the 1941 crop will have been obtained. If this is successful, a yearly survey on these lines

may be contemplated with the hope that it will provide much more accurate estimates of the crop than the present official forecasts.

Statistics and Information.—The Indian Central Jute Committee has concluded an arrangement by which the newly appointed Indian Trade Commissioner to the United States of America supplies the Committee with periodical reports on all points bearing on the consumption of jute and jute goods in the North American Continent. Similar arrangements are likely to be made to obtain information from Europe, South Africa, Australia, and the Far East. A correspondent has already been appointed in the Argentine for this purpose.

The purpose of the Committee's scheme for the collection and distribution of statistics and

information regarding jute is to collect and make available to the various interests concerned as much reliable information as possible on the production and consumption of jute and its products.

A bulletin is published monthly containing figures on the production, consumption, prices, stocks, imports and exports of jute and jute manufactures, and also information regarding the prices and utilisation of jute substitutes. It also includes items relating to export and import restrictions imposed on various countries and other information regarding the economics of jute and its competitors, as well as general information of interest to the trade. The Committee also plans to disseminate information to the grower to assist him towards improved methods of growing and retting.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from the Commonwealth of Australia, but a certain quantity from Iran also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Iran, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports.—Imports of raw wool and woollen manufactures during 1938-39 showed a marked decline and were valued at Rs. 282 lakhs as against Rs. 415 lakhs in 1937-38. Imports of raw wool, generally for consumption in Indian mills, totalled 7.3 millions lbs. valued at Rs. 62 lakhs as compared with 8.2 million lbs. valued at Rs. 85 lakhs in the preceding year. Supplies from Australia declined from nearly 5 million lbs. (Rs. 50 lakhs) to 4.4 million lbs. (Rs. 35½), while those from the United Kingdom increased in quantity from 2.1 million lbs. to 2.5 million lbs. with a decrease in value from Rs. 27 lakhs to Rs. 25 lakhs. Worsted yarn was in better demand, imports of which advanced from 1.6 million lbs. to 2.2 million lbs.; but those of knitting wool remained almost at the level of the preceding year and amounted to 1.2 million lbs. In both these lines, Japan was the leading supplier, having sent 1.8 million lbs. of worsted yarn and 855,000 lbs. of knitting wool. Of the remainder, Poland was responsible for 335,000 lbs. of worsted yarn and the United Kingdom for 205,000 lbs. of knitting wool. There was a decrease in the imports of woollen and worsted piecegoods which amounted to 2.5 million yards (1.4 million lbs.) valued at Rs. 45 lakhs as against 6.7 million yards (3.3 million lbs.) valued at Rs. 1.13 lakhs in 1937-38. As might be expected, following the restrictions on wool imports in Japan, there was a shortage of supplies of the raw material, with the result that receipts of woollen piecegoods from that country declined from 4.5 million yards valued at Rs. 57 lakhs in 1937-38 to 1.3 million yards valued at Rs. 15 lakhs during 1938-39. Imports from

the United Kingdom were also reduced and amounted to 847,000 yards valued at Rs. 23 lakhs. Arrivals from other countries included Rs. 4 lakhs from Italy and Rs. 2 lakhs from Germany. Imports of woollen goods mixed with other materials also declined from 1.6 million yards valued at Rs. 51 lakhs in 1937-38 to 2.3 million yards valued at Rs. 32 lakhs in 1938-39, of which the United Kingdom supplied 1.7 million yards valued at Rs. 22 lakhs as against 2.7 million yards valued at Rs. 38 lakhs in the preceding year. Supplies from Japan were smaller than in the preceding year and were valued at Rs. 4 lakhs in the year under review. Consignments from Italy amounting to Rs. 3 lakhs in value, showed an increase, while those from Germany valued at Rs. 1 lakh remained almost stationary.

There is only a limited demand for foreign carpets and floor rugs in India, imports of which were valued at Rs. 2½ lakhs in 1938-39 as compared with Rs. 4 lakhs in the preceding year. Of the total value of these imports in 1938-39, the United Kingdom supplied Rs. 1½ lakhs or 67 per cent, the remainder coming from Belgium, France, Germany, Turkey, Iran and China in the order named.

Imports of shawls and lohis were drawn chiefly from Japan and Germany and numbered 479,000 valued at Rs. 14 lakhs as against 493,000 valued at Rs. 18 lakhs in 1937-38. The contribution of these two territories to the total value of imports in 1938-39 was 64 per cent. and 29 per cent. respectively.

Imports of blankets and rugs, other than floor rugs, fell from 5.2 million lbs. valued at Rs. 39 lakhs as against Rs. 37 lakhs in 1938-39. Italy was by far the largest supplier, the consignments from that country being valued at Rs. 30 lakhs as against Rs. 37 lakhs in the preceding year.

Of the total imports of woollen hosiery, which showed a small variation, being valued at about Rs. 1½ lakhs in 1938-39, Japan supplied Rs. 7 lakhs and the United Kingdom, Rs. 6 lakhs.

Mill Manufacture.—The number of Mills in India, including Indian States, in 1937, the latest year for which details are available was

39, with a total paid-up capital of Rs. 100,89,739. The total number of looms and spindles were 1468 and 68,107 respectively.

The bulk of the wool used by the Indian mills is Indian wool although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. The market for manufactured goods is almost entirely in India itself.

Blanket Weaving and Carpet Manufacture—are carried on in various parts of the country

notably in the Punjab and the United Provinces. Woolen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashu*, the fine material fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Silk.

Sericulture has been practised in India for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, India has lost her export market and imports annually Rs. 1,30,00,000 worth of silks from Italy, Japan, China, Switzerland and the United Kingdom. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and imitations and artificial silk substitutes. In Assam, mulberry and muga silk worms are being reared and about Rs. 1,70,000 worth of silk is annually produced there. Bengal produces Rs. 4,00,000 worth of mulberry silk. Behar and Orissa

produce Rs. 32 lakhs worth of tasar and a little eri silk. The Central Provinces produce Rs. 14 lakhs worth of tasar silk. Madras, Mysore, Kashmir and the Punjab produce Rs. 4 lakhs, Rs. 42 lakhs and Rs. 6,000 worth of silk respectively. The United Provinces produce a little tasar in the Mirzapore district only. The Bhojpur State has just started eri silk rearing. The industry is progressing in Mysore and Kashmir only and in all other places it is declining. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on the foreign silks.

Indigo

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to La-ban and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dyestuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wool industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one

of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure but one exclusively of natural *versus* synthetic indigo.

The future of natural indigo is by no means a hopeless one provided steps are taken to effect such improvements as are clearly

possible. Indigo soils have deteriorated due to lack of proper manuring. Continual cropping has resulted in phosphate starvation. This can be checked by proper manuring with super-phosphates. Improvements by botanical selection and better business organisation and methods of marketing the product will also aid in hastening recovery.

Since synthetic indigo was put upon the market in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the Great War of 1914-18.

Again a demand has arisen for the natural indigo since the outbreak of the present war,

but it is nothing like the demand during the last war, nor have prices risen to the same height. So long as the war continues there will probably be a limited demand for natural indigo, after which prices will drop to level tending to make its manufacture an unsound proposition financially.

The history of the competition from the synthetic article has been such that it has been put on the market at prices always tending to be cheaper. Whereas the cost of production of the natural has increased with the cost of labour and the rise in values of other crops which have in consequence become more attractive proposition to the cultivator. As far as Behar is concerned the indigo industry may be regarded as dead though several indigo concerns are now manufacturing on a small scale for the duration.

OILS AND OIL CAKES.

The statistical publications, issued by the Commercial Intelligence Department of the Government of India, show that the export of all oil seeds from India is steadily going down except groundnuts on account of keen international competition.

It is economically as well as industrially unsound for India to export her oil seeds instead of manufacturing oils, oil cakes and other allied products in India. The present practice allows the other countries to derive the manufacturing profits and at the same time deprives Indian agriculture of the great potential wealth of oil cakes as cattle feed and manure.

In India there are about 500 oil mills registered under the Factories Act and over 1,000 medium size power driven oil mills. An immense quantity of oil is, as a matter of fact, already manufactured in this country by crude as well as up-to-date processes.

Village Oil Mills worked by bullocks and handpresses exist in all parts of the country and supply most of the local demand for oil and oil cakes. The big mills supply the requirements of the towns and export trade. These mills treat all kinds of oil seeds available in the country.

The industry has made good progress in the production of mustard oil, castor oil, groundnut oil and linseed oil and as a result the export of these oils and oil cakes to foreign countries has steadily improved during the last ten years. The progress in the case of groundnut and castor is very satisfactory.

The development of oil milling industry in India has to face the under-mentioned difficulties. There are high protective tariffs in European countries which encourage the export from India of raw materials rather than the manufactured products. Secondly there is a better

market for the oil cake in Europe and Indian oil cake, on account of want of standard specifications, is sold at a discount. The freight on oil seeds is less than that on oils and oil cakes, hence it is easy and economical to transport oil seeds by sea than oils or oil cakes. The development in the export trade in oils demands special consideration of shipping companies to provide tanks for bulk transport of oils as arranged by the railway companies.

The standardisation of oils and oil cakes will help the industry in finding markets in foreign countries where a better price can be obtained for the articles.

It is necessary to educate the Indian Cultivator in the use of oil cakes for feeding and manurial purposes and it should be impressed on him that the value of the article does not depend on the oil content but on oil and albuminoid content of the article. The lower oil content in the cake means a higher percentage of albuminous matter which is very essential for the cattle.

Effect of War on the Oil Industry of India.—During the War of 1914-18 the average export of linseed oil, groundnut oil and castor oil had increased by 443%, 150% and 60% respectively over the last pre-war average of 1912-13 and 1913-14, but the export of cake had, however, no marked change during that period. The oil crushing industry of India will have a good prospect of development during the present war period.

The prices of oils and oil cakes at the commencement of War in September were lower than half the prices of these articles during last pre-war, war and early post-war periods on account of general low price levels since 1933-34. The present War will have effect in increasing the price level and brisk trade in oils provided freight facilities are available.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promis-

ing and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachar gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1900:—

Progress of the Industry.

Year.	Area under tea in '000 acres.	Production in '000,000 lbs.	Year.	Area under tea in '000 acres.	Production in '000,000 lbs.
1900-1904 (average)	523	201	1930	804	391
1905-1909	539	242	1931	807	394
1910-1914	591	290	1932	809	434
1915-1919	662	374	1933	818	384
1920-1924	709	336	1934	826	399
1925	728	364	1935	832	394
1926	739	393	1936	834	395
1927	756	391	1937	834	420
1928	776	404	1938	833 *	453 *
1929	788	433			

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by nearly 60 per cent., the production has more than doubled.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the relative importance in 1937 of the various provinces from the point of view of the tea industry:—

Province.	Area under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary)
Assam	440	241,527	510,860
Bengal	202	108,566	199,712
Madras	78	35,415	66,852
Punjab	9	2,779	10,756
United Provinces	7	2,013	3,612
Bihar	4	1,202	2,506
Coorg	†	16	98
Total British India	740	391,518	794,405
Indian States	94	38,732	82,695
Total India	834	430,250	877,100

* Subject to revision.

† Less than 150 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little being about 91 million lbs. in 1937-38. The consumption figure during 1937-38 was a record one. The low domestic consumption however, enables India to export large quantities to other countries, the principal among which is the United Kingdom. In 1938-39 77 per cent. of the total quantity of tea produced in India was exported abroad. Of the total exports of 250 million lbs. the United Kingdom alone took 305 million lbs. during the year.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1937. During the first year of its operation the hopes engendered by the regulation scheme were, to a considerable extent, justified and the industry was enabled to meet what were undoubtedly very disturbing conditions. During the year 1937-38

which was the second year of the working of the scheme, the results were however not so satisfactory. In common with other commodities tea seems to have suffered from the diminished purchasing power of consumers and the restrictions on international trade. A feature of the year was the shifting of demand from the higher to the lower and medium grades of tea.

The export quota for the year 1936-37 was, as in the preceding year, fixed at 82½ per cent. of the standard exports and the year saw a steady recovery from the depressed conditions that characterised the trade in 1934-35.

The world demand for tea during 1937 was slightly better than in the preceding year and the quota for 1937-38 was raised to 87½ per cent. Stocks in the United Kingdom were not much above the normal and amounted to 188 million lbs. at the end of March 1938 as compared with 174 million lbs. at the end of March 1937, and there was a further recovery in prices. The scheme for the international control of tea exports was extended for a further period of five years from April 1938. The export quota for the year 1938-39 was fixed at 92½ per cent. with the result that the production and exports of tea increased, but the total value was only a crop of rupees less as a result of the decline in tea prices. The quota for 1939-40 has been reduced to 90 per cent. due to the larger stocks in the United Kingdom at the end of the year. The Indian Tea Control Act, 1938, was passed by the Legislature to regulate the production and marketing of tea.

The following table explains briefly the position as regards the export of tea from India:—

Year	Amount exported (million of lbs.)	Value in lakhs of rupees.
1	2	3
1926-27	49	29,04
1927-28	52	32,48
1928-29	260	26,60
1929-30	377	26,01
1930-31	376	23,56
1931-32	311	19,14
1932-33	379	17,15
1933-34	318	19,85
1934-35	324	20,13
1935-36	314	19,82
1936-37	302	20,01
1937-38	344	24,79
1938-39	550	23,42

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports:—

	1936-37 per cent.	1937-38 per cent.
To United Kingdom ..	84.9	86.1
To Rest of Europe ..	1.6	1.9
To Asia ..	5.1	1.9
To America ..	7.6	6.7
To Australasia ..	0.4	0.4
To Africa ..	0.4	0.4
	100	100

A considerable quantity of Indian tea is exported into the United Kingdom is normally re-exported to other foreign countries.

From 1921 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 ps. as against 6 as. 5 ps. in 1931-32 and 9 as. 4 ps. in 1930-31. The position, however, has improved considerably since then.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 = 100 :—

	Average price at auction sales.			Average price at auction sales	
	Price per lb.	Index Number.		Price per lb.	Index Number.
	As. p.			As. p.	
1901-02 to 1910-11 ..	6 0	100	1934-35 ..	8 9(a)	146(a)
1927-28 ..	14 10	247	1935-36 ..	5 2(b)	86(b)
1928-29 ..	11 4	189	1936-37 ..	9 5(a)	157(a)
1929-30 ..	9 11	165	1937-38 ..	4 10(b)	81(b)
1930-31 ..	9 4	156	1938-39 ..	10 1(a)	168(a)
1931-32 ..	6 5	107		4 8(b)	78(b)
1932-33 ..	5 2	86		11 4(c)	189(c)
1933-34 ..	9 7(a)	160(a)		4 9(b)	79(b)
	4 10(b)	81(b)		9 7(c)	146(c)
				4 0(b)	67(b)

(a) For teas sold with export rights.

(b) For teas for internal consumption.

The rate of duty under the Indian Tea Cess Act of 1903 was raised to Re. 1-4-0 per 100 lbs with effect from February 17th, 1937. The total amount of duty collected in 1937-38 was Rs. 41,68,000. The Indian Tea Cess Act was due to expire on 31st March 1938, but at the request made by the producers through the Indian Tea Market Expansion Board, the Government of India agreed to extend the life of the Act for a period of ten years. On the recommendation

of the Board, the cess on tea was increased to Re. 1-6-0 per 100 lbs from 18th March 1939. With the exception of female filter labourers, the wages of workers on tea plantations showed some improvement during the year 1936-37. Among settled labourers, the average wages of men, women and children in Assam were Rs. 6-12-9, Rs. 5-5-9 and Rs. 3-12-10 respectively as against Rs. 6-9-0, Rs. 5-2-2 and Rs. 3-9-8 respectively in 1935-36.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1937-38 (including plantations of less than 10 acres) was 182,000 acres, as against 190,000 acres during the previous year.

The total exports of coffee increased from 150,000 cwt. in 1926-27 to 277,000 cwt. in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 198,000 cwt. and 184,000 cwt. respectively; but exports again rose in 1930-31 and amounted to 293,000 cwt. In 1931-32 the shipments declined to 156,000 cwt., but in 1932-33 exports again rose and amounted to 173,000 cwt. There was a further rise during 1933-34, the total exports amounting to 186,000 cwt. In 1934-35 the exports again declined to 141,000 cwt., but in 1935-36 there was a pronounced rise in the quantity exported which amounted to 216,000 cwt. It, however, again declined to 211,000

cwt. in 1936-37. There was a further fall in the following year when the exports dropped to 145,000 cwt., but the demand for Indian Coffee in the markets abroad was on the whole satisfactory during 1938-39 and the exports again rose 185,000 cwt. during the year. The principal markets for Indian coffee were the United Kingdom, France and Norway. During 1938-39, the share of the United Kingdom increased from 29,000 cwt. to 70,000 cwt. while that of France decreased from 42,000 cwt. to 38,000 cwt. Shipments to the Netherlands and Belgium increased from 1,000 cwt. and 7,000 cwt. to 5,000 cwt. and 10,000 cwt. respectively. Norway curtailed her requirements from 28,000 cwt. to 23,000 cwt.

Not only does India export coffee in large quantities, but till a few years ago it also used to import it, chiefly from Java, Ceylon and the Straits Settlements, which it used to re-export to Mascare Territory, Iraq and the Bahrain Islands. During 1936-37, however, there were no imports of coffee into India. The quantity of coffee imported in 1937-38 was 1,195 cwt., the major portion of which came from Burma.

The following table gives the figures of the production and exports of Indian coffee :—

Production and Export of Indian Coffee in thousands cwt.					Surplus available for Home consumption
12 Months ending June 30th.					
	Production.	Export.			
1927	306.1	241.3			64.8
1928	317.5	261.5			56.0
1929	247.9	138.3			109.6
1930	352.0	279.4			72.6
1931	294.4	208.4			86.0
1932	300.1	162.0			138.1
1933	295.0	168.7			126.3
1934	308.8	186.6			122.2
1935	292.6	147.5			145.1
1936	367.6	230.0			137.6
1937	303.6	162.4			141.2
1938	299.3	146.5			152.8

The total production of cured coffee in India during the year 1937-38 was 33.5 million lbs. as compared with 34 million lbs. during the previous year. The Indian Coffee Cess Act, providing for the creation of a fund to be expended by a Committee specially constituted in this behalf for the promotion of the cultivation, manufacture and sale of Indian Coffee, was passed in November, 1935. It provides for the levy of a customs duty on all coffee produced in India and exported therefrom to any place beyond the limits of British India or to Burma at a rate, not exceeding one rupee per cwt., fixed by the Governor-General in Council on the recommendation of the Coffee Cess Committee. The rate originally fixed was 8 as. per cwt. But from 1st June 1938, it has been raised to Re. 1 per cwt.

The daily average number of persons employed in the plantations during 1937-38 was returned at 102,288 of whom 65,885 were permanently employed (namely, garden labour 42,201 and outside labour 23,684) and 36,403 temporarily employed (outside labour), as compared with

101,837 persons (42,950 garden and 20,847 outside labour permanently employed and 38,040 temporary outside labour) in 1936-37.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s. in 1923 and 127s. in 1929 it fell to 86s. in 1930.

The declared value per cwt. of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs. 63-6-7 in 1932-33 but fell to Rs. 55-1-4 in 1933-34. In 1936-37, it had declined to Rs. 39-15-8, but recovered to Rs. 40-6-3 in the following year and was Rs. 40-10-4 in 1938-39.

Sugar.

Sheltered behind an adequate tariff wall, the Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages—consequences of the depression—have helped the rapid growth of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs. 25 and Rs. 30 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent. (amounting to Re. 1-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communiqué* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 31, 1933. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Re. 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, *viz.*, Rs. 9-1-0 per cwt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0, and a surcharge was imposed at the rate of Rs. 2-0-0 per cwt., equivalent to the increased excise duty of Rs. 2 per cwt. on internal production from the same date. The total import duty from 28th February, 1937, was Rs. 9-4-0 per cwt. With effect from 1st April, 1939, the protective duty was reduced to Rs. 8-12-0 per cwt. and it was raised to Rs. 9-12-0 from 1st March, 1940, as a result of an increase in the excise duty

Board submitted its Report in December, 1937, but as the Government of India could not complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, *viz.*, Rs. 9-4-0 per cwt. up to 31st March, 1940, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs. 0-8-0 per cwt. pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of Rs. 8-12-0 per cwt. for a period of two years, ending 31st March, 1941, when fresh proposals will be made for determining the extent of protection to be conferred on the industry up to 1946.

Due to an increase in the excise duty on sugar from Rs. 2-0-0 per cwt. to Rs. 3-0-0 per cwt. from 1st March, 1940, the import duty was increased to Rs. 9-12-0 per cwt. from 1st March, 1940.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing 'fair prices.'" The excise duty was enhanced to Rs. 2-0-0 per cwt. from 28th February, 1937, and to Rs. 3-0-0 per cwt. with effect from the 1st March, 1940.

A Tariff Board Enquiry was instituted in March 1937, for determining the extent of protection to be conferred on the industry for the remainder of the period of 8 years. The Tariff

Board submitted its Report in December, 1937, but as the Government of India could not complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, *viz.*, Rs. 9-4-0 per cwt. up to 31st March, 1940, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs. 0-8-0 per cwt. pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of Rs. 8-12-0 per cwt. for a period of two years, ending 31st March, 1941, when fresh proposals will be made for determining the extent of protection to be conferred on the industry up to 1946.

Statistics given below, show the progress of the industry in recent years :—

Year.	No. of Factories.	Quantity of sugar manufactured from cane. Tons.	Quantity of sugar refined from gur. Tons.	Quantity of Khandasari production Tons. (Est.)	Total quantity of sugar. Tons.
1929-30	27	89,768	21,150	200,000	310,918
1930-31	29	119,589	31,791	200,000	351,650
1931-32	32	158,581	69,539	250,000	478,119
1932-33	57	290,177	80,106	275,000	645,283
1933-34	112	453,965	61,094	200,000	715,059
1934-35	130	578,115	30,103	150,000	757,218

* Factories in Burma and production in Burma, excluded after 1936-37.

The area under cultivation of sugar-cane has kept pace with increased production; from 2,677,000 acres in 1929-30, it increased to 4,440,000 acres in 1936-37 but fell to 3,869,000 acres in 1937-38 and to 3,108,000 acres in 1938-39. Again it increased to 3,731,000 acres in 1939-40. Prior to 1932-33, there were only 31 cane factories; 25 new factories were added in 1932-33 alone while another 65 new factories were started in the following year—an increase of 400 per cent. In two years. Since 1933-34, about 34 new factories of large cane crushing capacity have been established, and in 1938-39, no less than 144 factories were working. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (*gur*) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 700 per cent. During 1936-37, India produced over 1,230,000 tons of sugar, i.e., slightly more than her estimated consumption of about 1,150,000 tons in 1936-37, and after two lean years, again produced over, 13½ lakh tons in 1939-40.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent. in the following year and dropped to about 250,000 tons in 1933-34 and decreased further to 221,000 tons in 1934-35. During 1935-36, imports fell further to 198,888 tons, and in 1936-37, the

net import was only 11,960 tons. As a result of dwindling imports Government are losing revenue from this source. The import during 1937-38 was only 9,410 tons but the import in 1938-39 was over 254,000 tons, in view of the deficit in indigenous production. Because of the heavy duty, the yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3.81 crores for the financial year ended March 31, 1935, to 3.24 crores for the year ended March 31st, 1936, to Rs. 50 lakhs in 1936-37, to Rs. 25 lakhs in 1937-38, and to Rs. 45 lakhs in 1938-39. In 1939-40, however, it went up to over Rs. 350,00,000, due to increase in imports, necessitated by the small cane-crop, diseased cane, etc., in 1938-39, in India. The imposition of the excise duty at the rate of Re. 1-5-0 per cwt. on factory sugar, and Re. 0-10-0 on Khandasari sugar, from April 1st, 1934, has yielded a revenue to the Government of Rs. 97,22,000 in 1934-35, and Rs. 1,58,24,000 in 1935-36, and Rs. 2,52,62,000 in 1936-37. With the increase in excise duty on factory sugar to Rs. 2 per cwt., and Re. 1 per cwt. on Khandasari sugar the yield during 1937-38 was Rs. 3,30,97,000 in 1937-38, and Rs. 4,22,44,000 in 1938-39. The yield with increase further in 1939-40, due to the further enhancement of the excise duty to Rs. 3 per cwt. with effect from 1st March, 1940.

Since the imposition of the excise duty it is noteworthy, that the Khandasari production has gone down considerably. From 1st March, 1939, the duty on Khandasari sugar was decreased to Re. 0-8-0 per cwt., but the definition of "factory" in the Sugar Excise Duty Act, 1934, was amended, so as to omit the reference

to the number of workers employed with a view to enable duty being charged even in premises where less than 20 workers are employed. The Government of India expect that with the definition of 'factory' thus amended even with the reduced duty on Khandsari of Re. 0-8-0 per cwt there will be a revenue of about Rs. 6,00,000 during 1939-40.

In view of the astounding growth of the industry within such a short time, the following table of estimate of annual consumption and of the margin for import of sugar into India, up to 1940-41, will be of interest—

	1933-34	1934-35	1935-36	1936-37. (Est.)	1937-38. (Est.)	1938-39 (Est.)	1939-40 (Est.)	1940-41. (Est.)
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Indian sugar production of the preceding cane-crushing season ..	645,281	715,059	767,218	1,107,167	1,230,900	1,072,200	766,400	1,350,000
Consumption of sugar in India during the official year ..	380,757	432,000	1,015,000	1,010,000	1,150,000	1,100,000	950,000	1,000,000
Difference between production and consumption, representing margin for imported sugar entering into consumption during the official year.	264,524	283,059	267,782	—67,167	—80,900	17,200	200,000	—250,000

During the year 1937, there was a precipitate fall in the price of sugar and in order to avert internal unrestrained competition a Sugar Syndicate was brought into existence, comprising over 90 mills. Later in the year, the industry approached the Government for legislative interference with a view to avoid over-production of sugar and to overcome internal unrestrained competition, which brought down the price of sugar to an uneconomically low level. The Governments of the U.P. and Bihar, to whom these representations were made, have passed Sugar Factory Control Acts, and have made it compulsory for every mill to obtain a licence for working sugar factories from the Government. One of the conditions of the grant of licence to a factory has been membership of the Indian Sugar Syndicate. The Indian Sugar Syndicate has thus been given legislative recognition by the Government of the U.P. and Bihar, and all mills working in the provinces of the U.P. and Bihar are compelled to sell their sugar through the Syndicate. The Governments of the U.P. and Bihar have also appointed a joint Control Board consisting of the representatives of the U.P. and Bihar Governments, the representatives of the industry, and of cultivators and consumers.

During the year 1939-40 the Government of India imposed a ban on the export of sugar from India, by sea, to any country except to Burma, for a period of five years.

During the 1938-39 season, the price of sugar rose considerably due to the very high price of cane fixed by the Governments of United Provinces and Bihar, the apprehended shortage of cane, in the beginning of the season, and the

outbreak of the European war. During the middle of 1940, however, there was a fall in the price of sugar, due to the larger quantities of cane available in U.P. and Bihar where the price of cane was also reduced, to induce the mills to crush the cane, which would have remained uncrushed, otherwise.

It is also of interest to note that the production of *gur* for direct consumption is increasing since 1931-32.

	<i>gur</i> . (Tons.)
1931-32	2,758,000
1932-33	3,240,000
1933-34	3,486,000
1934-35	3,701,000
1935-36	4,101,000
1936-37	4,268,000
1937-38	3,364,000
1938-39 (Est.) ..	3,200,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (*gur*) being 5,452,000 tons (*vide* The Indian Sugar Industry Annual, for 1939, and 1940, by M. P. Gandhi).

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 120,000 workers.

INDIAN TOBACCO.

History.—The Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to India about the year 1508. Though there are many species in the genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana glauca* and *Nicotiana glauca*. Of the two, the former is more common and commercially important.

Importance.—Among the principal tobacco producing countries of the world, India occupied the first rank in 1936-37 with 1,497,000 acres producing 1,375 million lbs., while United States of America took a second rank with 1,437,000 acres producing 1,153 million lbs. The chief tobacco growing provinces in India are Bengal (307,000 acres), Madras (253,000 acres), Bombay (144,000 acres), Bihar (126,800 acres), United Provinces (80,000 acres) and the Punjab (61,700 acres). The annual value of the crop in India is about 18 crores of rupees and constitutes, therefore, an important source of ready cash to the cultivators.

Research.—A great deal of research work has been done in India since the last 30 years both by the Government and by private agencies, as will be seen below —

The Imperial Agricultural Research Institute, Pusa, (now at New Delhi) isolated Pusa T. 28 and T. 63 among *N. glauca* varieties and Pusa T. 18 among *N. rustica* for chewing and *hooka* purposes respectively. Details of the methods of fine-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadad, the Bombay Department of Agriculture isolated the Gandini 6, Piliu 45, and Kelm 49, heavy yielding and chewing tobacco strains and is attempting to improve the Nipani tobacco on the Tobacco Research Station, Nipani started in 1938.

On the Government Agricultural Farm at Barrilhat (Raipur), the Bengal Department of Agriculture worked out the possibility of growing superior varieties of cigar tobacco from Sumatra, Havana, Manila and Pennsylvania.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T. 20 in *Natu* or country tobacco for chewing and pipe purposes and early maturing strain (H. 8-9) of Harrison special, the cigarette tobacco variety popular in India.

The Imperial Council of Agricultural Research, New Delhi, started in 1936 a Tobacco Research sub-station at Guntur for the improvement of the quality of cigarette tobacco. It was found that jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped to improve the quality of cigarette tobacco better than Maize and Variga (*Panicum Miliaceum*).

The India Leaf Tobacco Development Company the largest buyers of tobacco in India have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in Saharanpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia

tobacco production and have helped to build up the Virginia tobacco industry to the position it now occupies.

The Mysore Tobacco Company with the assistance of research work on the Government Farms of the Mysore Agricultural Department have now brought under cultivation 5,000 acres of Virginia tobacco in Mysore State.

Improvement in Marketing.—The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in the above direction, the Indian Tobacco Association which consists of representatives of growers, dealers and manufacturers was formed at Guntur. Under the Agricultural Produce (Grading and Marketing) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for un-manufactured flue-cured and sun-dried Virginia and sun-dried *Natu* (Country) tobacco. Samples of these grades are furnished every year to the Trade Commissioner for India in London, for purposes of arbitration. The export on basis of **Agmark** grades has been on the increase. In 1930 tobacco was being graded at 7 centres in Madras, Bengal, Bihar and the United Provinces.

In 1939, the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezwada taluk of Krishna District. This provides for regulating the market practices regarding weighing, trade allowances and methods of sale. Seven market yards were opened where the growers and dealers were given facilities for transacting their business in tobacco.

Production.—More than half the Indian production is concentrated in 5 clearly defined zones (12).

(1) THE NORTH EAST AREA comprising the districts of Raipur, Jolapur and Durgam or Bengal including the Cooh Beha State. About three-fourths of the crop in this area is under *N. glauca* which includes the varieties locally known as *Jatu*, *Bhenu*, *Nakhol* and *Rough*. The remaining one-fourth is under *N. rustica* which includes the local *Chandi* and *Mothari* varieties. *N. glauca* varieties are mainly used for cigar and cheroot making and *N. rustica* varieties for *hooka* and chewing purposes.

The soils are grey ash coloured loams rich in potash. Tobacco is sown in the nurseries from August to September and transplanting of seedlings is done from October to December. The crop is irrigated from temporary wells and is harvested from January to March. The leaf is cured by air-curing and sun-curing methods. The produce is marketed from March to October. The finer qualities of *Bhenu* are shipped to Burma, while the poorer qualities are sold in India for cigarette manufacture. *Ingli* and part of *Mothari* are sold for making snuff.

(2) THE GUNTUR AREA comprising the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of flue-curing of Virginia tobacco in 1928 all the tobacco was sun-cured. The tobacco produced in this area is grouped into (i) Virginia—(a), Flue-cured (b), Sun-cured, (ii) Country or *Natu* tobacco, invariably sun-cured. In the first group, Harrison Special and in the second group *Thoka Ala*, *Kann Ala* varieties are important. Flue-cured tobacco is exported to the United Kingdom to the extent of about 30 million lb. for manufacture of cigarette and pipe tobacco. The sun-cured Virginia and *Natu* tobaccos are exported to the United Kingdom, Japan and other countries for making cheaper cigarettes, etc. The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably without the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured country and Virginia tobaccos are marketed from March to June. There are nearly 5,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by striding the leaf to jute twine and curing them on racks pitched on the open field to drying in sun. To the Indian Leaf Tobacco Development Company Ltd. goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribution, research and propaganda in manual requirements, proper methods of curing and ensuring a market for the tobacco by buying the major portion (nearly 70 per cent) of the production.

(3) THE NORTH BIHAR AREA comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two-thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by the cigarette manufacturers in India. The production from *N. rustica* is utilised for *hooka* purposes.

The soils are light ash-coloured, deep and of calcareous alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings is commenced in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to middle of June.

(4) THE CHAROTAR (GUJARAT) AREA comprising Anand, Borsad and Nadiad talukas of Kaira district and Pethad and Bhadran talukas of Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (i) *Gandhu*, (ii) *Pilu*, (iii) *Kelu*, (iv) *Kulu*, (v) *Saiguri*. Of late, attempts are being made to grow a few acres under *Calcutta* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *boli* tobacco, while *Kulu*,

being irrigated with well water rich in salts (Nitrates), is eminently suited for *hooka* and snuff purposes. *Saiguri* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the Baroda State have been doing work for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Pilu* and *Kelu* are grown without irrigation, while *Gandhu* is grown dry or irrigated. *Kulu* and *Saiguri* are irrigated. The crop is harvested in December-January. The leaf is either air or ground-cured. The tobacco is sold from the latter half of December to end of June with the peak period in March and April.

(5) THE NIPANI AREA including Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj States. In this area varieties of *N. tabacum*, viz. *Maru*, *Sangli*, *Nipani*, *Jawara*, *Kare*, *Baghani* and *Surti* are mainly grown. Of the varieties of *N. rustica*, *Pandharpuri* is very largely grown. Except the tobacco produced on the riverine soil, which is used as *Pathpan* for chewing, all the tobacco is converted into *Jarda* for *bidi*. The *Pandharpuri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is grown on a small area on the red loams. The nurseries are sown in the middle of June and planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and drops by June.

Most of the tobacco exported from India to Aden and Dependencies is from the Charotar and Nipani areas. Apart from these five important areas, each province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts are in progress, through *ad-hoc* committees established for the development of tobacco, to grow the several types e.g. cigarette, *bidi*, *hooka*, chewing and snuff tobaccos upto the limit of their requirements in the first instance. The Imperial Council of Agricultural Research, New Delhi has been rendering great help in this direction.

Manufactured Products.—Tobacco is manufactured into many different forms for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of other various products mentioned below. The figures in brackets show the value of the product in Crores of rupees.

(i) *Hooka* (9.60), (ii) *Cheroots* (9.20), (iii) *Bidi* (7.52), (iv) *Cigarettes* (5.86), (v) *Chewing* (3.02), (vi) *Snuff* (1.53), (vii) *Cigars* (0.15) (Total—36.88).

Apart from cigarettes, the other tobacco products are prepared with little of standard machinery, leaving room for mushroom manufacturers and thus leading to a great variation in the quality of products, standardisation of which is engaging attention.

Export and Import.—India imports mostly from the United States of America 3 million lbs. of unmanufactured tobacco costing Rs. 41 lakhs. The imports of manufactured products are to the extent of 1 million lbs. of cigarettes, 59,000 lbs. of pipe tobacco, 22,000 lbs. of cigars and 41,000 lbs. of other manufactured tobacco costing Rs. 37 lakhs, Rs. 3½ lakhs, Rs. 70,000 and Rs. 1½ lakhs respectively. The United Kingdom for cigarettes and pipe tobacco, and Philippines for cigars are the largest exporting countries to India.

Besides Aden and Japan India exports mostly to the United Kingdom; 36 million lbs.

of unmanufactured tobacco costing Rs. 109 lakhs and 419,000 lbs. of cigarettes valued at Rs. 5 lakhs are exported. Three-fourths of these exports are to Ceylon and of the remainder, the major portion is shipped to Federated Malaya States and Straits Settlements. 62,000 lbs. of cigars valued at Rs. 96,000 are exported to Straits Settlements and the United Kingdom. 566,000 lbs. or other sorts of manufactured tobacco costing Rs. 98,000 are exported to other countries principally to meet the demand of the Indian population there.

Now that the exports of unmanufactured tobacco from India to markets abroad are growing in volume, the necessity of standardising the quality of tobacco thus exported is increasingly felt in order to bring her into line with other tobacco producing countries. It is a matter of gratification that the necessary steps in this direction have already been taken by the Government.

THE LAC INDUSTRY.

Lac is a resinous substance secreted by an insect which lives on the twigs of certain trees. The insects are extensively cultured, especially in Northern India. Lac is an important constituent for numerous industrial processes. The annual production of raw lac in India is 40,000—50,000 tons.

The chief use of lac in India is in polishing furniture. But this can obviously absorb only a limited quantity of the produce. Another use is in "hot" lacquering of wooden toys, pen-holders, etc., but here again the consumption, though increasing, is still very small. Refuse lac is sometimes used in the manufacture of bangles and for filling hollow gold and silver articles. But all the above uses together probably do not account for more than 2-3 per cent. of the total lac produce.

Shellac moulding appears to be confined in India only to the manufacture of gramophone records; and this manufacture, partly for climatic reasons, is not extensive. Shellac was only one of many other materials for the moulding trade till the rise of the gramophone industry gave shellac the unique place which it now occupies in this industry, no synthetic resin having yet been able to replace it. Among

high-class gramophone records, those with a shellac base are undoubtedly the best.

The steady improvement in the lac industry since 1900 has been largely due to the growth of the gramophone industry. At present 30 to 40 per cent. of the total world output of lac is consumed in the manufacture of gramophone records. There is yet a large potential market for gramophones in the East.

With improvements in heat resistance and mechanical strength brought about by chemical modifications, a wide field of application which the synthetic resins have opened up can still be exploited by shellac. The Indian Lac Research Institute at Nankun in Bihar and its fellow research organisation in London are engaged in investigating these openings, together with the possibilities of improvements in cultivation, pest control, &c., which will lead to the production of a better grade of raw material. Recent developments in interesting the uses for lac include new moulding powders comparable with synthetic resin compositions, baking enamels from refuse lac, oil varnishes, transparent resins and adhesives, etc. Improved methods of cultivation are taught to the villagers through trained demonstrators.

INDIAN FILM INDUSTRY

The Indian Film Industry at the present time claims to occupy eighth place among the industries of India. It is 27 years old and celebrated its Silver Jubilee in 1939 by holding a Congress and Exhibition in Bombay.

The first Indian film "Harishchandra" was produced by Mr. D. G. Phalke in the year 1913, and since then the development of the industry has been both extensive and rapid. With the coming of talkies the pace of progress substantially increased. Early development took place in Bombay, which has been described as the "Hollywood of India." From Bombay the industry spread to other provinces, and it is now well established in Bengal as also in Madras, in which it has made remarkable progress in recent years. The principal film producing studios in India are located at Bombay,

Poona, Kolhapur, Calcutta, Bangalore, Madras, Coimbatore, Erode, Rajahmundry, Salem, Vizagapatnam, Lahore, Lucknow, Jubbulpore, and Karachi.

Although exact figures are not available in certain cases, it is estimated roughly that about Rs. 17 crores are invested in the production, distribution and exhibition branches of the industry, in which about 40,000 people earn their livelihood. There are about 75 film producing concerns, and the total production of feature films, of an average length of 14,000 ft., comes out on an average to about 200, at an average cost of about Rs. 1,00,000 per film. It is thus estimated that about Rs. 2,00,00,000 are spent annually in the production of pictures.

FEATURES AND SHORTS.

The following table gives the number of and Lahore. The figures show that while in short and feature films exhibited in India feature films the production of the Indian The table has been compiled from reports of industry has considerably increased there has censored films published by the Boards of not been as great an increase in the production Film Censors at Bombay, Calcutta, Madras of shorts —

Year	FEATURES		SHORTS		GRAND TOTAL	
	Indian	Foreign	Indian	Foreign	Indian	Foreign
1920 (figures not available)
1922 (figures not available)

Britain	94	104	85	83	80	55	39
Other Countries ..	7	4	4	2	3	2	9
Total	641	613	644	628	575	355	300

There are about 250 distributors, mainly in Bombay, Calcutta, Delhi, Madras, Lahore, Bangalore, Karachi and Bhusawal to supply cinemas throughout the country with pictures for exhibition.

The number of cinemas has been rapidly increasing and there are about 1,265 cinemas, of which 1,000 show Indian films, while 265 show foreign films. In addition there are about 500 touring cinemas.

The cinemas showing foreign films are catered for by about a dozen distributors, the majority of whom represent American and the rest English producers. These distributors import on an average 400 feature films and 1,200 shorts every year. It is claimed that the

industry has paid over Rs. 1,46,00,000 to the Central Government in import duties on raw and exposed films since 1921. The revenue has grown from year to year from about Rs. 2 lakhs a year to about Rs. 14 lakhs in a period of 17 years. The rate of Customs Duty is 25% of the invoice value on Raw Film, and on exposed Film of 37½% on a valuation of As. 7 per foot for long films and As. 3 per foot for short films.

In addition to this the industry also contributes to central revenues appreciable amounts in Income-Tax and through Railway Freights. The amount in Freights is estimated at about Rs. 10 lakhs. In addition the various Provincial Governments benefit in the way of Entertainment Tax to the extent of about Rs. 40 lakhs.

IMPORTS OF FILMS.

The following table giving in footage and value the totals of raw and exposed films imported into India and of the import duty paid to Government —

Year	Footage	Value	Total Import Duty

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and

in trunks which have secret compartments. The retail trade in the towns is very cunningly organised and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the Great War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport, or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house-owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only the provinces of Szechwan, Yunnan, and Canton excepted; (3) the total cessation of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger

of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical scientific purposes by 10 per cent. yearly, as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. At present it is exported only to Burma, and a very small quantity to Zanzibar and Pemba and Aden and Dependencies. India is the only country that has made any considerable sacrifices of the kind.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphine and it is on the experience of the abuse

of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking eating seems to do little, if any, harm. Smoking which is the habit of the Far Eastern races rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India to these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

Present Policy.—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. It is, and always has been, the desire of Government to suppress excessive indulgence.

Under the Government of India Act of 1919, opium was a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena

presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Chandigarh in the United Provinces where it can only be cultivated under license. Importation into British India from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The process of reduction was started in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933 the total area of cultivation of *Baccharis opium* from 1932-33 being as under:

1923-24	=	27,224 Acres.
1931-32	=	13,702 "
1932-33	=	6,806 "
1933-34	=	7,67 "
1934-35	=	6,900 "
1935-36	=	6,564 "

The population of British India according to the 1931 Census is 271,526,992, and the consumption per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for medicinal purposes was 11.04 grs. per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs. Since 1931 the consumption rate has further diminished.

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

Glass was manufactured in India centuries before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations, a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa the Chronicles of the Sinhalese Kings (306 B.C.) when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century glass was an established industry in India producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. Some of them have failed. They devote themselves mainly to the manufacture of bangles and lampware side by side with bottlemaking on a small scale.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry. The former which is represented in all parts of the country, has its chief centres in the Ferozabad area in the United Provinces and Belgaum District in the South. It is mainly concerned with the manufacture of cheap bangles made from glass blocks manufactured in larger quantities. With the coming of the factory-scale manufacture of bangles, the Cottage Industry is struggling hard for existence. The Factory Industry is turning out much better quality bangles and has also successfully eliminated Japanese imports. Ferozabad is in full control of the bangle market since the outbreak of the War.

In other fields the Factory Industry is mainly concerned with the manufacture of kump chimneys and globes, tumblers, jars, bottles, etc., the chief centres of production being the United Provinces, Calcutta and Bombay. A few factories specialise in quality glass blocks for the Cottage Industry. One factory in the United Provinces has been manufacturing sheet glass with modern equipment since 1920.

Records of the earlier ventures have shown that failure in some cases was due in part at least

to preventible causes. Foremost among these, were lack of enlightened management, lack of expert attention and, in many cases, small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously, like lampware, bottles and bangles. Paucity of sufficient fluid capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

In October 1931, the inquiry into the glass industry was referred by the Government of India to the Indian Tariff Board. The Board submitted its report in March 1932. It recommended the grant of protection for ten years and outlined proposals for protective duties on the following basis:—(1) Sheet and Plate Glass including figured and ribbed glass—Rs 4 per 100 sq. feet or 25 per cent., *ad valorem*, whichever is higher; bangles, beads and false pearls—50 per cent., *ad valorem*; glass and glassware of certain specified types, like tumblers, tins, shades, chandeliers—50 per cent., *ad valorem*.

These findings however were not acceptable to the Government of India, who considered that the absence of indigenous supplies of raw materials constituted a disadvantage to the industry, which could not possibly be balanced by any advantages which it might possess in other respects. This, however, does not imply rejection of the recommendation, because Government have decided to postpone their final decision in the matter. For the present Government have decided to afford the glass manufacturing industry a certain measure of relief by way of a rebate of duty on imported soda-ash.

In 1938 the Government of the United Provinces constituted a Glass Technology Section in Benares with a view to developing this industry. Since then steps have been taken for the installation of modern equipment, such as furnaces and machines, with a view to reducing the cost of production. The manufacture of glass articles hitherto not made in India are being encouraged. The production of glass beads and false pearls, an industry so far confined only to former Czechoslovakia is being introduced. Apart from this the Glass Section is also engaged on research work connected with problems of the industry.

HIDES, SKINS AND LEATHER.

Supply of raw hides and skins. India is regarded as a surplus country in respect of her resources of raw hides and skins. It is estimated that normally she produces 20 million cattle hides, 3.5 million buffalo hides, 22 million goat and 3.5 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the bulk, about 75 to 80 per cent. is derived from animals that die a natural death. On account of this reason the output of these hides increases when famine, flood, cattle epidemics, etc., take an undue toll on livestock. Goat and sheep skins are, however, derived from animals slaughtered for meat and their production remains more or less at a steady level.

Trade in raw hides and skins. Of the total output of India's raw hides and skins it is estimated

that from 50 to 75 per cent of cattle hides and about 45 per cent of goat and sheep skins are now locally tanned and the balance exported in the raw condition. Previous to the European war of 1914-1918, about 56 per cent of the total export of cattle hides used to go to Germany and Austria and the balance to the other European countries and United States, while 80 per cent of the exported goat skins used to go to United States. The Germans brought the collections, curing and grading of the Indian cattle hides and the Americans those of goat skins to a fairly high standard. The war disorganised this export trade and during post-war years the Government of India levied an export duty of 20 per cent on hides with a rebate of 15 per cent for those which were exported to and tanned in Empire countries. The object of this measure

was to foster in the first place India's leather industry and in the next encourage tanning of Indian hides within the British Empire and reduce their export to Germany and other non-Empire countries. Later on, the duty was abolished. The measure did not succeed in stopping export to Germany which continued to revive until the outbreak of the present war in 1939. The repeal of the duty helped the revival, and export to Germany rose to about 28 per cent of the total export in 1935-36. The post-war measures, however, increased tanning in India. There was a change in the direction of goat skins export also during the post-war period. After the war the United Kingdom developed the manufacture of glaze kid and considerable quantities of Indian goat skins are being now exported to that country and the U. S. A.'s share is proportionately reduced. Still the U. S. A. takes about 3 times as much as the United Kingdom and about 70 per cent of the total export from India. India is responsible for the supply of about one-third of the total goat skins used in the world's tanning industry and some of her goat skins, especially those of Bengal and Bihar, are regarded to be the best raw materials for high class glaze kid.

Cattle hides are cured for the export trade by air drying and dry salting. The better grades of the former are dried out, being stretched lengthwise on frames, and are called "Framed" hides, and the inferior ones are dried by spreading on the ground and are known as "Crumpled" hides. Air dried hides are treated with a solution of arsenic to ward off insect damage before export. Dry salt curing is done mostly in Bengal with a saline earth known as "Khari Salt" which consists principally of sodium sulphate mixed with varying proportions of sodium chloride and earthy matter. Goat skins are mostly dry salted and to a lesser extent air dried. The total export of raw hides and skins amounted to Rs. 4,77,99,635 in 1937-38.

Recently the Agricultural Marketing Board of the Government of India has been attempting to grade slaughtered cattle hides. Hide-grading stations have been started at slaughter houses at Delhi, Agra and Calcutta and specifications for grades have been formulated. Hides and skins are included in the Schedule to the Agricultural Produce (Marketing and Grading) Act of 1937. An attempt is being made by the Board to improve flaying in the slaughter houses where grading stations have been started by giving a bonus to flayers.

Tanning in India.—The tanning industry in India has made great strides since the last European war. It may be divided into two categories, indigenous and modern.

Indigenous tanning.—This is carried out principally by the people of the tanning caste which is a depressed Hindu community known as the Chamar. They tan according to indigenous methods and their products may be divided into a number of typical groups (i) the miscellaneous crude leather produced in the villages to meet local needs, (ii) the bag tanned buffalo sole leather produced in the Punjab and Calcutta which is extensively used for making shoes, (iii) tanned sheep skins of the Punjab known as "Kabuli Bheris" used as a cheap book binding leather throughout India, (iv) half-tanned leather of Madras and Bombay. The first three varieties are all consumed in

India while the better grades of the fourth are exported chiefly to the United Kingdom and from there to other countries. The half-tanned cattle hides and calf skins are known in the International trade as East India tanned Kips and Calf skins. These are retanned and finished in the importing countries for making shoe upper and other varieties of dressing leather. The cattle hides used to be tanned formerly with avaram or turwar bark (*Cassia auriculata*) which occurs in South and Western India. But since the last war they are being tanned in Madras with wattle bark, large quantities of which are imported from South Africa. The goat and sheep skins in Madras and these as well as cattle hides in Bombay are still tanned with avaram bark. The present annual export of half-tanned leather is valued at about six crores of rupees.

Modern tanning.—Leather for Harness and Saddlery for military equipment has long been manufactured at Cawnpore by Western processes of vegetable tanning from buffalo and heavy cow hides using the local tanstuffs, babul bark (*Acacia arabica*) and myrobalans (*Terminalia Chebula*). Since the last war sole leather has also been manufactured in Cawnpore, Agra, Calcutta and Madras from buffalo hides according to modern process for use in ammunition boots and better types of civilian footwear. Its output is now quite considerable in the country and is increasing.

Chrome tanning.—The outstanding feature in the field of modern tanning in India since the last war is the phenomenal development of chrome tanning, especially for the manufacture of the shoe upper leather, Box and Willow sides from cattle hides and Box and Willow calf from calf skins. A number of tanneries in Cawnpore, Calcutta and Madras are engaged in the production of these leathers. Some of the tanneries are quite big and equipped with the latest chrome tanning machinery while there are large numbers in Calcutta which are small. Indian Box and Willow sides have been regularly exported to Burma, the Straits Settlements, Iraq, Persia and Africa since the last war. But after the Ottawa Trade Pact of 1933 Indian Box and Willow sides and Calf have been exported in increasing quantities to the United Kingdom, being helped by a preferential tariff in favour of India. The export of these leathers to the United Kingdom rose to Rs. 54,15,500 worth in 1937. The Ottawa Trade Pact has also helped the development of the manufacture of glaze kid in India and its export from the country. The export of glaze kid rose to the value of 9.3 lakhs of rupees in 1938.

Other important products of the leather industry are: someprog leather, i bands, roller skins, chrome lace leather, etc.

Training centres for leather industry.—There are a few training centres among which the Bengal Tanning Institute in Calcutta and Jullundur Tanning Institute, Jullundur City, maintained respectively by the Government of Bengal and Punjab may be mentioned. Particulars of the courses of training may be obtained from the institutes. There are also peripatetic tanning demonstration parties under the Industries Departments of the Governments of the Punjab, U. P., Bihar, Orissa and Bengal which hold instructional classes in rural areas to introduce improved processes of tanning.

COIR.

Coir is the trade name given to the fibre obtained from the husk of the coconut fruit. India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that there coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried out the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks, and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding the husk against a revolving spiked drum which combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as "mattress fibre." The longer fibres are retained in the hand of the operator and are classed as "bristle fibre" which is exported and used in the manufacture of brushes, etc. About 75 per cent. of the Ceylon produce is exported as raw fibre, and only 25 per cent. as yarn or manufactured coir.

The Indian industry, as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organised cottage industry. The freshly harvested nuts are purchased by merchants who convey them down the backwaters to suitable places for a retting. Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected in places where the ground contains a considerable admixture of sand. Here, pits are dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. When filled they are covered with plaited coconut leaves and weighed down with soil or mud. The husks are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action. At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a

revolving drum furnished with projecting spikes resembling thin saw blades made of iron. The fibre is sorted out into colour grades and distributed among the local people who spin this into yarn. The fibre is first made into "slivers" and is then either spun by hand or on a wheel. This is again returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. It is then tied into bundles and is disposed of to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

The yarn is very carefully graded, both for manufacture and for export, according to its colour, which is, in reality, a gauge of proper retting. The best quality of coir is a golden-yellow colour and the lowest grade is a grey colour which shows that the husks have either been over-retted or that the condition for retting have not been satisfactory.

Properly retted coir is of the highest quality. It is much more easily spun than machine made coir, because the fibres are clean and free from adhering pith and a much more even yarn is obtained. It is much stronger than machine-made coir because none of the long or "bristle" fibres have been removed in the process of extraction. The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and it therefore has special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The value of the Indian trade is considerable: the imports into Great Britain alone, which represent less than 20 per cent. of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India, and it provides the raw material in the shape of yarn and fibre for a considerable industry in Europe. More than 80 per cent. of the manufactured coir products imported into the United Kingdom are produced in India and more than 90 per cent. of the coir yarn. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent. of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent. of that of the total Indian exports of coir and coir products.

The Government of Madras have opened a coir demonstration school at Beypore, Calicut under the control of the Director of Industries and Commerce, where students are trained in improved methods of cleaning fibre, of spinning of coir yarn on the wheel, of producing ropes, belts, mats, rugs, etc.

PATENTS, DESIGNS AND TRADE MARKS.

'Patents,' 'Designs' and 'Trade Marks' constitute certain forms of personal rights which are collectively referred to as rights of 'industrial property.' In India the rights in Patents and Designs are regulated by the Indian Patents and Designs Act, 1911, as amended from time to time, and the procedure under the Act is regulated by the Indian Patents and Designs Rules, 1933 and the Indian Secret Patent Rules, 1933. The Act and the Rules are contained in the *Patent Office Handbook*, which is available from the Manager of Publications, Civil Lines, Delhi. The Handbook contains in addition detailed instructions for those interested in Patents and Designs. The broad features of the Patents and Designs Act may be described as follows:—

Patents.—A patent is a legal document which confers upon the patentee the exclusive privilege of making, selling and using an invention and of authorising others so to do. Patents granted under the Indian Patents and Designs Act are operative throughout British India. The normal term of a patent in British India is 16 years. But in exceptional cases, this term can be extended by a maximum of ten years. The continuance of the right conferred by a patent after the first four years of its term is subject to the payment of an annual renewal fee.

What may be patented.—A patent may be granted for an 'invention,' which is defined as "any manner or new manufacture including an improvement or an alleged invention." In other words, to be patentable an invention must be a *manufacture*; it must be new; it must be useful and it must not be such as may be said to be obvious to a person skilled in the art to which the invention relates, and acquainted with the common knowledge in that art at the time of applying for the patent. The word 'manufacture' includes any process, apparatus, device, machine, article, or composition of matter.

Illustrations of patentable inventions are *new* textile machines, power plants, agricultural implements, domestic appliances, drying and moistening apparatus and processes and sanitary appliances.

In the field of chemical industry *new* processes and apparatuses for manufacturing synthetic products, foodstuffs, dyes, tallow substitutes, starchy raw materials, soda ash, caustic soda, bleaching powder, toilet preparations, and processes for the treatment of oil seeds, by-products and waste materials are all patentable inventions.

A plan of campaign in warfare or business, or the discovery of a hitherto unknown natural law is not patentable. Similarly, a game of chance or skill which does not require new means for playing it, or a method of calculation or a new notation for writing music, a new method of curing diseases, natural substances suitable for food, cannot be classed as "manufactures" and are therefore not patentable.

What are commonly called "patent medicines" are medicines prepared by secret formulae, and are not usually covered by the grant of patents. The proprietors of such medicines may in most cases possess trade mark rights in the names by which the medicines are known.

New methods of using well-known apparatus may also be patented, provided the *new* methods result in unforeseen technical advantages.

New compositions of matter may also be patented if their properties would not be deducible from known properties of the material constituting its constituents.

In the case of chemical inventions it should be noted that the article or substance which is produced may be old, but if the mode of producing it is new, the process will be patentable.

Who may obtain a patent and how.—Any person in possession of an invention may obtain a patent. Application for a patent should be made to the Controller of Patents and Designs and filed at the Patent Office at 1, Council House Street, Calcutta. The applicant himself may not be the inventor, but then the name of the inventor has to be disclosed. The application has to be accompanied by a fee of Rs. 10 and by a specification containing a full description of the invention and its mode of operation. All applications for patents and the specifications accompanying them are examined by the Patent Office and are advertised in the Gazette of India, Part II, so as to enable interested parties to oppose the grant of the patent.

Other features.—Inventors of instruments or munitions of war may assign their inventions to the Central Government and obtain 'secret' patents therefor. Improvements in existing patents may be protected by 'patents of addition,' for which no renewal fee need be paid, but which would ordinarily remain in force only so long as the main patent is in force.

After a patent is obtained, the patentee may either sell the patent outright or may grant licences for its exploitation. He may work the patent himself.

If during the continuance of a patent, any person makes, sells or uses the invention without obtaining a licence from the patentee or counterfeits it or imitates it, the patentee may institute a suit for infringement against the said person.

The defendant in an infringement suit may counterclaim revocation of the patent. A patent worked wholly outside British India may also be revoked by the Central Government.

DESIGNS.

For the purpose of the Indian Patents and Designs Act, 1911, a 'design' means the features of shape, configuration, pattern or ornament applied to any article by any industrial process, which in the finished article appeal to and are judged solely by the eye. A mode or principle of construction of anything which is in substance a mere mechanical device, or a trade mark is not a design for the purpose of the Indian Patents and Designs Act. Literary or artistic creations such as books, pictures, and music, which fall under the Indian Copyright Act (Act III of 1914) do not also come within the scope of the Indian Patents and Designs Act.

A design to be registrable must be *new or original* and must be applicable to an *article*. The original registration remains in force for five years, but the period can be extended up to fifteen years in all.

During the existence of copyright in a registered design, the unauthorised application of the design to the article in question for purpose of sale is prohibited. The penalty for each infringement is a sum not exceeding five hundred rupees recoverable as a contract debt; the proprietor may, in the alternative, elect to bring a suit for the recovery of damages and for

an injunction against the repetition of the infringement, in which case the infringer is liable to pay such damages as may be awarded. By a recent amendment of section 18 of the Indian Sea Customs Act, the importation into British India of goods bearing a pirated design can be stopped.

GENERAL

On the whole, Indian Law and practice for the protection of inventions and the registration of designs closely follow the law and practice of the United Kingdom. The existing Indian Patents and Designs Act extends to the whole of British India including British Baluchistan and the Santhal Parganas. Although Burma is no longer a part of British India the Indian Patents and Designs Act, 1911 was, by a special Act of the Burma legislature, made operative in Burma up to the 31st of March 1940. It is anticipated that this arrangement will be continued up to such time as the Burma Legislature enacts a separate Patents and Designs legislation for Burma. A draft Bill for this purpose was published in Part III of the Burma Gazette dated the 3rd February 1940.

The Indian States also do not come within the scope of the Indian Patents and Designs Act; but Baroda, Cochin, Hyderabad (Deccan), Jodhpur, Jammu and Kashmir, Mysore and Travancore have patent laws of their own, and particulars of the same may be obtained from the Patent offices of the respective States.

A patent granted in British India does not extend to the United Kingdom or to any other British possession. But, under a reciprocal arrangement, an applicant for an Indian patent may, under certain conditions, claim a 12 months' priority in Australia, Baroda, Canada, Ceylon, Eire, New Zealand, the Union of South Africa and the United Kingdom for the corresponding patents that may be granted to him in those countries.

With the separation of Aden from India and its constitution into a Crown Colony on the 1st of April 1937, the Indian Patents and Designs Act so far as it was applicable to Aden was repealed by the Government of Aden, but by an ordinance issued in that colony, it is provided that all British Indian Patents and registered designs bearing dates prior to the 1st April 1937 and in force at that date, shall continue to be in force in Aden also so long as they remain in force in British India.

TRADE MARKS.

Trade Marks are to some extent protected in British India by section 3 of the Merchandise Marks, Act, (IV of 1889), which enacts sections 478-489 of Chapter XVIII of the Indian Penal Code. An Act, namely the Trade Marks Act 1940, for the registration and more effective protection of trade marks has recently been passed by the Indian Legislature. The main provisions of this Act will not come into force until such time as a notification appointing a date in that behalf, is issued by the Central Government.

In accordance with this Act a "mark" includes a device, brand, heading, label, ticket, name, signature, word, letter or numeral or any combination thereof; and a "trade mark" is a mark used or proposed to be used in relation to goods for the purpose of indicating a connection in the course of trade between the goods and some person having the right to use the mark.

The Register of Trade Marks will be kept at the Patent Office under the control and management of the Controller of Patents and Designs, who is to be the Registrar of Trade Marks. A branch of the Trade Marks Registry will be provided at Bombay for facilitating the registration of trade marks in respect of textile goods. Applications for the registration of textile marks may, however, be made at Bombay or at Calcutta at the option of the applicant.

Trade marks contrary to law or morality, or disentitled to protection in a court of law by virtue of them being likely to lead to deception or confusion, shall not be registrable.

Applications for registration of trade marks shall be liable to be opposed and the decision of the Registrar will be appealable to a High Court having jurisdiction.

Original registration of a trade mark will be in force for seven years, but this period may be extended by fifteen years at a time.

The registered proprietor will have the exclusive right to use the trade mark on the goods for which it is registered.

The certificate of registration shall be *prima facie* evidence of the validity of the registered proprietor's title during the first seven years. Thereafter, the registration shall be regarded as valid in all respects, unless it was obtained by fraud or unless the trade mark offends against section 8 (law or morality etc.).

Any person not being a trader in the goods in question who undertakes to certify the quality, standard, purity or some other characteristic of any goods, may register a trade mark as a *certification trade mark*. The grant of such registration shall be subject to the approval of the Central Government and the applicant will be required to deposit certain regulations for regulating the use of the certification trade mark.

The Act also contains provisions for defensive registration and for registering "permitted use" of the trade marks by other persons than the proprietors of such marks.

The false description of a trade mark as registered, when in fact it has not been registered under the Act shall be punishable with fine or imprisonment or with both.

Use of Royal Arms without authority may be restrained by injunction.

Section 85 of the Act is of immediate interest to owners of trade marks. It provides that intending applicants may deposit their trade marks at the Patent Office in advance of the coming into operation of the main provisions of the Act. It is expected that rules for regulating the deposit of trade marks under this section will be framed by Government in the near future.

Another provision of great interest to owners of trade marks is contained in section 20 of the Act. This section provides that "no person shall be entitled to institute any proceedings to prevent, or to recover damages for, the infringement of an unregistered trade mark unless such trade mark has been in use by him since before the 25th of February, 1937, and unless an application for its registration *made within five years* from the commencement of the Act, has been refused. It would accordingly be advantageous for owners of old marks to apply for the registration of their trade marks as soon as possible after the entire Act comes into force, as even if registration is refused such refusal would confer substantial privileges on the applicants.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA (In lakhs of Rupees.)

Total Miscellaneous Premium Income	„ .85 „	„ .91 „

There has been a large expansion of insurance business in India during the last decade. This is shown by the fact that the total business remaining in force with Indian Life Offices at the end of the year 1927 was Rs. 10,00,00,000 and by the end of 1937, had grown to Rs. 184,00,00,000. The total new sums assured by the offices in 1937 amounted to nearly Rs. 41,74,00,000, the largest of any year. Again the total income of Indian life companies was Rs. 4,29,00,000 in the year 1927 while in 1937 it was Rs. 12,02,60,000 a figure which exceeded the preceding year's income by over Rs. 67,00,000.

The total number of companies which are subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 was 305 according to the Indian Insurance Year Book 1938. Of this total, 219 companies are constituted in India and 149 companies are constituted outside India.

Of the 219 Indian companies, 67 are established in the Bombay Presidency, 19 in Bengal, 40 in the Madras Presidency, 27 in the Punjab, 2 in Sind, 16 in Delhi, 10 in United Provinces, 4 in Bihar, 5 in Central Provinces, 2 in Ajmer-Merwara, 2 each in Burma and Assam and one in North-West Frontier Province.

Of the 149 non-Indian companies, 72 are constituted in the United Kingdom, 20 in the British Dominions and Colonies, 17 in the Continent of Europe, 16 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 169 in number and of the remaining 50 Indian companies, 31 carry on life business along with other insurance business and 19 carry on insurance business other than life. As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 149 non-Indian companies, 123 carry on insurance business other than life, 12 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 26 companies, 17 are constituted in the United Kingdom, 7 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

During 1937, 2 Indian Companies were established with the object of transacting life assurance business. Of these companies, 1 is established in Bengal and the other in Delhi.

DIVIDING INSURANCE BUSINESS

Some Indian companies transact life assurance business on the dividing plan under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The defects of dividing insurance business are many. Most of the companies which transacted dividing insurance business realised that they could not continue this business for long. This class of dividing business as well as the other on the call system has been prohibited under the new Insurance Act, 1938. It is accordingly highly essential that those companies which still transact this class of business should stop it forthwith and consult

actuaries with a view to converting their existing business into ordinary life assurance business on sound principles.

PROVIDENT INSURANCE SOCIETIES

In addition to the insurance companies which are subject to the provisions of the two Acts of 1912 and 1928, there are 528 societies which are registered under the Provident Insurance Societies Act, 1912 and transact mostly dividing insurance business. The remarks about "Dividing Insurance Business" are applicable to these societies also. Very few of the existing provident societies are survivors of those which a quarter of a century ago numbered about 1,200. When the Provident Societies Act of 1912 was passed, the majority of these societies ceased to exist. Of the existing 528 societies, 285 are established in Bengal, 35 in the Bombay Presidency, 55 in the Madras Presidency, 79 in the Punjab and 24 in Sind, and the remaining societies are scattered over the other provinces of India.

LIFE ASSURANCE BUSINESS

The total new life assurance business (excluding business on the dividing plan) effected in India during the year 1937 amounted to 214,000 policies assuming a sum of 484 crores and yielding a premium income of 253 lakhs of which the new business done by Indian companies amounted to 261,000 policies assuming a sum of 39 crores and having a premium income of 202 lakhs.

The share of the British companies in respect of new sums assured is $\frac{1}{4}$ crores, of the Dominion and Colonial companies $\frac{1}{4}$ crores, of the single German company $\frac{1}{2}$ crore and of the single Swiss company $\frac{1}{2}$ crore.

The average sum assured under the new policies issued by Indian companies is Rs. 1,485 and under those issued by non-Indian companies Rs. 3,089.

The total life assurance business effected in India and remaining in force at the end of 1937 amounted to 1,471,000 policies assuming a total sum of 277 crores including reversionary bonus additions and having a premium income of 143 crores. Of this the share of Indian companies is represented by 1,090,000 policies assuming a sum of 184 crores and having a premium income of nearly 9 crores.

ANNUITY BUSINESS

Annuity business continues to be slight in India. This class of business for various reasons is not as popular as in the West. The total new annuity business effected during the year 1937 was for the amount of 24 lakhs per annum of which the share of Indian companies was Rs. 23,000 per annum. The total annuity business remaining in force at the end of that year was for the amount of 122 lakhs per annum, of which the amount payable by Indian companies was 12 lakhs per annum.

Some Indian Life Offices have extended their operations outside India, mostly in British East Africa, Ceylon, Federated Malay States and Straits Settlements. The total new sums assured by these Offices outside India in 1937 amounted to 24 crores yielding a premium income of 15½ lakhs and the total sums assured

including reversionary bonus additions remaining in force at the end of 1937 amounted to 12½ crores having a premium income of 63½ lakhs.

The total new sums assured by Indian Life Offices in 1937 amounted to nearly Rupees 42 Crores and exceeded the previous year's figures by nearly Rs. 4 Crores

INDIAN LIFE OFFICES' BUSINESS.

The following table shows the New Business effected by Indian Life Offices during each year since 1926 the Total Business remaining in force at the end of the year, the Total Life Assurance Income of Indian Companies and the Life Assurance Funds

Year.	New business of Indian Life Offices written during the year	Total business of Indian Life Offices remaining in force at the end of the year	Total Life Assurance Income of Indian Companies.	Life Assurance Funds of Indian Companies.
	Rs.	Rs.	Rs.	Rs.
1926	10.35 crores.	53 crores	3.32 crores.	13.75 crores.
1927	12.77 "	60 "	4.29 "	17.71 "
1928	15.41 "	71 "	4.23 "	17.16 "
1929	17.29 "	82 "	4.92 "	18.73 "
1930	16.50 "	89 "	5.40 "	20.52 "
1931	17.76 "	98 "	5.87 "	22.44 "
1932	19.66 "	106 "	6.88 "	25.07 "
1933	24.83 "	119 "	8.15 "	28.71 "
1934	28.92 "	137 "	8.34 "	31.87 "
1935	32.81 "	152 "	9.33 "	35.19 "
1936	37.80 "	175 "	11.35 "	40.24 "
1937	41.74 "	197 "	12.02 "	45.09 "

The total income of Indian Life Offices during 1937 amounted to Rs. 12.92 crores. The income consisted of Rs. 982 lakhs under Premiums, Rs. 199 lakhs under interest and Rs. 21 lakhs under other receipts.

LIFE FUNDS AND INTEREST YIELD.

The life assurance funds increased by 4.17 20 crores during 1937 and amounted to 45 crores at the end of that year. The average rate of interest earned on the life funds during the year after deduction of income-tax at the source, was 4 per cent.

The net rates of interest realised by the Indian Life Offices in each of the past five years are as follows:—

Year	1933	1934	1935	1936	1937
Rate of interest	5.17	5.03	4.93	4.69	4.76

The total deposit made by Indian Life Offices with the Reserve Bank of India, Calcutta, under section 4 (1) of the Indian Life Assurance Companies Act, 1912, up to the 31st December 1938 amounted to Government Securities of the face value of Rs. 2,11,34,000 as against securities of the face value of Rs. 1,94,77,000 on deposit on the 31st December 1937.

POST OFFICE INSURANCE FUND.

Besides the Indian Life Offices, there are some pension funds, mostly connected with Government services, which are exempt from the opera-

tion of the Indian Life Assurance Companies Act of 1912. The Indian Post Office Insurance Fund is also exempt from the operation of that Act. The Post Office Insurance Fund was instituted by the Government of India in 1883 for the benefit of the postal employees, but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund for the year ending 31st March, 1938:—total number of policies 95,877, total sums assured and bonuses Rs. 19,89,87,000, total income Rs. 1,06,09,000; Life Assurance Fund Rs. 8,00,69,000.

The last valuation of the Post Office Fund was made as at 31st March 1937. It disclosed a surplus of Rs. 1.13 lakhs of which Rs. 63½ lakhs was allocated to the policy holders for payment of reversionary bonus at the rate of 1½ per cent. per annum in the case of whole life as well as endowment assurances.

NON-LIFE BUSINESS.

The net Indian premium income of all companies under insurance business other than life assurance during 1937 was 2.38 lakhs of which the Indian companies' share was 96 lakhs and that of the non-Indian companies 2.02 lakhs.

The total amount is composed of Rs. 145 lakhs from Fire, Rs. 62 lakhs from Marine, and Rs. 91 lakhs from Miscellaneous insurance business.

The Indian companies received Rs. 47 lakhs from Fire, Rs. 16 lakhs from Marine, and Rs. 33

lakhs from Miscellaneous insurance business. The non-Indian companies received Rs. 98 lakhs from Fire, Rs. 46 lakhs from Marine, and Rs. 58 lakhs from Miscellaneous insurance business.

From the net figures given above it is not possible to form a correct estimate of the total business effected in India as a considerable portion of Indian business of both Indian and non-Indian companies is reinsured outside India.

The Indian Companies which transact a substantial amount of fire or marine insurance business also operate outside India. These companies had a net premium income of 1.08 lakhs in 1937 from business outside India.

ASSETS OF COMPANIES.

The following is a summary of the assets of Indian Companies:—

	Rs.
Mortgages on property	2.10 lakhs
Loans on policies within their surrender values	4.79 "
Loans on stocks and shares, etc. ..	18 "
Indian Government Securities ..	28.23 "
Securities of Indian States	57 "
British, Colonial and Foreign Government Securities	61 "
Municipal, Port and Improvement Trust Securities, etc.	5.25 "
Shares in Indian companies	4.10 "
Land and house property	3.28 "
Agent's balances, outstanding premiums, outstanding and accrued interest, etc.	2.48 "
Deposit, cash and stamps	2.20 "
Miscellaneous	1.65 "
	<hr/>
	55.53 lakhs

It will be seen that the bulk of the investments are in stock to Rs. 38 cro nt fluctuation fund of Rs. 73 lakhs provided for in the balance-sheets.

The total assets in India of non-Indian companies amount to Rs. 49 crores. The bulk of this amount Rs. 37 crores—represents the Indian assets of companies constituted in the United Kingdom and 11 crores those of companies constituted in the Dominions and Colonies. The Indian assets of the American companies amount to 2 lakhs, those of the continental companies to

32 lakhs, of the Japanese to 8 lakhs and of the Japanese to Rs. 1,000 only. Out of this total amount of 49 crores, 43 crores represent Indian assets of companies which carry on life assurance business in India either solely or along with other insurance business.

The expenses of management of Indian Companies in 1937 was 26.3 against 24.1 in 1936 and 24.8 in 1935. In 1913 the percentage was 18.0.

Dividends to share-holders in 1937 was .8 per cent. against .7 in 1936 and .5 in 1935.

CLAIMS AND VALUATIONS.

In 1913 the claims by death were responsible for 32.9 per cent. of the companies' outgo, and those by survivorship for only 9.7. In 1923 the figures were: by death, 21.0, and by survivorship, 15.7. In 1933, the respective figures were 13.9 and 13.3, in 1936 they were 13.6 and 12.8 and in 1937 they were 13.2 and 13.3.

There were 180 Life Offices which submitted their accounts and business returns for the year 1937 under the provisions of the Indian Life Assurance Companies Act. The Insurance Year Book contains the results of the latest valuations of 103 of these Life Offices majority of which have undergone more than one valuation. Of the remaining 77 Life Offices with the exception of about half a dozen Life Offices whose business is not susceptible of an actuarial valuation and several others which are undergoing valuations at present all others have not yet reached the stage of having a valuation.

The results of these valuations show that the Life Offices concerned had in the aggregate 1,009,000 policies in force on the valuation dates assuring a sum of Rs. 172 crores including bonus additions and an annuity of Rs. 2½ lakhs. The life assurance funds of these Life Offices amounted to Rs. 39 crores and they received an annual premium of Rs. 8½ crores.

The valuations disclosed a surplus in the case of 82 companies and deficit in the case of 21 companies. The total surplus of these 82 companies amounted to 461 lakhs of which 414 lakhs was allocated to the policy-holders and 30 lakhs to the share-holders and the balance was either set aside as an additional reserve or was carried forward unappropriated. The deficit in the case of the 21 companies amounted to Rs. 10½ lakhs. Of these, the deficit in the case of 17 companies was covered by the available paid-up capital, thus proving solvency but precluding the payment of either bonus or dividend. In the case of the remaining 4 companies, the deficit was not covered by available assets and these companies are taking steps to transfer their business to other Life Offices.

Finance.

the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion; indeed it was only the first phase. The Government of India had taken the growing revenue—those which issue from taxes, duties, and customs. The Province's resources either almost static, like land revenue, or actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces were con-

fronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets.

Federal Finance Committee.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review was held to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue, Federal or Provincial, the Federal Finance Committee reported as follows:—

Federal.

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India.

Excise on Matches.—The imposition of an excise duty on matches is already under active consideration. It is a tax which is contemplated from the outset. It is a tax which is a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2.50 crores would be raised in British India. (Here it may be noted that an excise duty on matches made in British India was first imposed in the 1934-35 Budget and has continued since.)

Other Excises.—It is possible that other excise duties may occupy an important place in the fiscal policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation. (Here it may be noted that an excise duty on sugar made in India was first imposed in the 1934-35 Budget and has continued at varying rates since then.)

Monopolies.—We have examined the suggestion made at the Round Table Conference, that Federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly in itself could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to licence. Public utility monopolies stand on rather a different footing, but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely precluded.

Commercial Stamps.—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

In proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax.—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised; and

as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units if it so desired. (Here it may be noted that a sales tax on Tobacco has since been imposed by the provinces of Bombay and Madras in their 1936-40 Budgets.)

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units, but clearly the facts would not justify reliance on them as a source of revenue in the near future. (Here it may be noted that in 1938 the Government of India deputed a special officer, Sir Alan Lloyd, or the Central Board of Revenue to conduct an investigation into the possibilities of instituting a system of death duties in India. The upshot of the investigation was that the Government of India decided not to proceed with the proposal to impose death duties, as most provincial Governments were opposed to it.)

Terminal Taxes.—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. We are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the

constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government. We are aware of no reliable data for estimating the yield of such taxation.

Niemeyer Report.

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions, partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the pite growing provinces of a further 12½ per cent. of the pite tax.

Annual cash subventions are as follows: To the U. P. Rs. 25 lakhs for 5 years only, to Assam Rs. 30 lakhs, to Orissa Rs. 40 lakhs, to the N.-W. F. Province Rs. 100 lakhs (subject to re-consideration after 5 years), and to Sind Rs. 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:—Bengal Rs. 75, Bihar Rs. 25, U. P. Rs. 15, Assam Rs. 45, N.-W. F. Province Rs. 110, Orissa Rs. 50, Sind Rs. 105, and U. P. Rs. 25 extraordinary cost to the Centre Rs. 192 lakhs.

Orissa is to get a further non-recurrent grant of Rs. 19 lakhs and Sind of Rs. 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but

subject to the proviso to section 138 (2) of the Act. The Centre is to distribute the income-tax to the provinces so that finally 50 per cent. of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the Centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income-tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P. 15, Punjab 8, Bihar 10, C. P. 5, Assam 2, N.-W. F. Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income-tax proceeds for the first five years from the beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues. His remarks on this point were:—

"The position of the railways is frankly disquieting. It is not enough to contemplate that in five years' time the railways may merely cease to be in deficit. Such a result would also tend to precipitate or delay the relief which the provinces are entitled to expect.

"I believe that both the early establishment of effective co-ordination between the various modes of transport and the thorough going overhaul of railway expenditure in itself are vital elements in the whole provincial problem."

RECENT INDIAN FINANCE

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Selous faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked up to a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt.

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs. 13.16 crores, including a drop of Rs. 8 crores in Customs and 4½ crores in income-tax. The total deterioration under Finance headings was Rs. 376 lakhs and on commercial departments

Rs. 118 lakhs. This meant a total deterioration of Rs. 18.40 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakhs the net deficit would be Rs. 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs in civil expenditure, making a total saving of Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14.51 crores, which he proposed to cover by fresh taxation.

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Selous came before the Legislative Assembly with a Supplementary Finance Bill. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries; and thirdly, to impose fresh taxation.

The 1932-33 Budget.—Presenting the 1932-33 Budget on March 7, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been

introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931.

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. He estimated the general position for 1933-34 to be the same as for the current year, neither better nor worse, and in particular that India would be able to maintain the same purchasing power for commodities imported from abroad.

The 1934-35 Budget.—In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakhs. The Finance Member announced the imposition of an excise duty on sugar, a reduction in the silver import by 2½ annas to 5 annas per ounce and the abolition of the export duty on raw hides. Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs. 2-4-0 per gross of boxes on matches made in British India. Favourable changes in postal and telegraph charges were announced.

The 1935-36 Budget.—This Budget was expected to show a surplus of Rs. 150 lakhs available for tax reduction. The Silver duty was reduced to 2 annas an ounce. The export duty on raw skins was abolished. The remaining surplus of Rs. 1.42 lakhs was disposed of, first, in restoring the emergency cuts in pay, and second, in taking off some of the surcharge on income-tax. This surcharge was reduced by one-third; the cost was Rs. 1.36 lakhs, leaving a nominal surplus of Rs. 6 lakhs.

The 1936-37 Budget.—The surplus for 1936-37 was estimated at Rs. 2.05 lakhs, and this was disposed of in two ways. First, the remaining surcharge on income-tax and supertax was cut by a half, leaving it at one-twelfth of the original figure; further, income-tax on incomes between Rs. 1,000 and Rs. 2,000 a year was abolished. Second, a postal concession was made by increasing the weight of the one-anna letter from half to one tola, and adopting a scale of an additional half-anna for every additional tola. The effect of these changes was to reduce the surplus to Rs. 7 lakhs.

The 1937-38 Budget.—The prospective deficit for 1937-38 (due to trade depression and consequent smaller receipts from customs and income-tax) was Rs. 158 lakhs, which would have been Rs. 342 lakhs but for an amount available in the Revenue Reserve Fund. The deficit was met by a series of imposts: import and excise duties on silver were raised from two annas to three annas an ounce, while the sugar duties were raised on a graduated scale. Changes were made in the postal rates for parcels, book-patterns and samples, and the existing rates of salt duty, income-tax and super-tax were continued.

The 1938-39 Budget.—This Budget was generally regarded as preserving the *status quo*, since no changes in the taxation system were introduced and a surplus of Rs. 9 lakhs was anti-

eipated. But there were special features in regard to Defence, for which an extra Rs. 80 lakhs was to be expended to provide for mechanisation of certain units, erection of a modern munitions factory, adequate coastal defences and maintenance of a fleet of six modern escort vessels which would be free to co-operate with the British Navy for the defence of India. In return for this, India was no longer required to pay the British Government the sum of £100,000 for naval defence.

A further feature of the 1938-39 Budget was the financing of Provincial Autonomy in its inaugural stages. While the separation of Burma caused a loss of Rs. 250 lakhs, payments to the Provinces under the Niemeyer Award amounted to Rs. 198 lakhs. To start the Provinces in a sound state the following steps were taken: their existing debts to the Centre were partly cancelled and partly consolidated at a lower rate of interest; additional grants-in-aid were made to deficit provinces; a larger share of the jute excise duty was disbursed; and with the improvement in railway revenues, a start was made on the distribution of income-tax receipts to the provinces.

The 1939-40 Budget.—On the basis of the maintenance of existing taxation and the adoption of the new system of income-tax embodied in the Income-Tax (Amendment) Act of 1939 and the "slab system" of assessment (for details of which see under "Income-Tax"), the position was as follows: Estimated Revenue, Rs. 82.15 lakhs. Estimated Expenditure, Rs. 82.65 lakhs. Estimated Deficit, Rs. 50 lakhs. Both revenue and expenditure were down on the previous year, the former because of trade recession which would result in lower receipts from customs, and the latter because of economies under interest charges and Defence.

To meet the prospective deficit the Finance Member proposed an increase of 100 per cent. in the tariff duty on imported raw cotton, from six pices per lb. to one anna per lb. This was estimated to yield Rs. 55 lakhs, thus converting the deficit into a small estimated surplus of Rs. 5 lakhs. Other changes embodied in the Budget were the new rates of income-tax and super-tax drawn up on the "slab system" and a decrease in the excise duty on *Khandasari* sugar from one rupee to eight annas per cwt. At the same time the Sugar Excise Duty Act was altered so as to bring within its scope all sugar factories regardless of the number of men employed; this had the effect of raising the actual yield from the excise by Rs. 51 lakhs.

The Defence Budget stood at Rs. 45.18 lakhs, which was a reduction by Rs. 1.00 lakhs on the previous year, the saving being brought about by the following factors: (1) receipt of an additional £500,000 under the Garra Award from the British Exchequer, (2) transfer to the Imperial Establishment of four British Battalions, one Cavalry Regiment and five Tank Companies, and (3) drawing on Military Sinking Funds to the extent of Rs. 49 lakhs.

The 1940-41 Budget.—A fortunate surplus for the previous financial year (1939-40) of Rs. 91 lakhs, but the necessity of finding new revenue to meet a prospective deficit of Rs. 7.16 lakhs in 1940-41 were the basic features of India's Fin-

War Budget presented by the Finance Member Sir Jeremy Raisman. That the previous year had ended with a substantial surplus was indeed gratifying, seeing that the country had already been at war for seven months. By applying the surplus of Rs. 91 lakhs towards the coming year, the prospective deficit was reduced to Rs. 6.25 lakhs.

This short fall Sir Jeremy Raisman proposed to meet in three ways. The first was an Excess Profits Tax, already announced to the country but subsequently altered in its incidence so as to provide for an impost of 50 per cent. on all abnormal war profits, above a taxable minimum of Rs. 30,000, earned since September 1, 1939. These excess profits to be calculated on the basis of a standard year which might be, at the assessor's option, any financial year between 1935-36 and 1939-40. This was estimated to produce a net accession to revenue of Rs. 3.00 lakhs. The second means was a further increase of two annas per gallon in the duty on motor spirit (petrol), estimated to yield Rs. 1.40 lakhs, while the third impost was an increase from two rupees to three rupees in the excise duty on refined sugar with a corresponding increase in the import duty, calculated to yield Rs. 1.90 lakhs.

Repercussions of the War.—The three changes together were expected to produce Rs. 6.30 lakhs and to convert the prospective deficit of Rs. 6.25 lakhs into a small surplus of Rs. 3 lakhs. The fact that no change was made in the standard rates of income-tax was remarkable in view of the need to finance India's war effort and this came as a great relief to the general tax payer as well as to industrialists. That it was possible to meet the deficit largely by indirect taxation was partly

attributable to boom conditions in trade and industry arising out of the war. The Railways and the Posts and Telegraphs Department had in the previous year contributed more than was anticipated to the general fisc, but their earnings in the ensuing year were viewed on a conservative basis. Customs and excise revenues were doubtful factors under war conditions and despite the improved returns during the first two months of 1940, the Finance Member preferred to allow for a drop of Rs. 4.07 lakhs from this source. On the other hand, taxes on income were expected to show an increase and under this head the Finance Member expected a rise of Rs. 1.41 lakhs.

Defence.—On the expenditure side, the main feature was naturally the Defence Budget, which provided for an increase of Rs. 5.11 lakhs on the previous year's estimate and stood at the sum of Rs. 49.29 lakhs. That this figure was not higher was due principally to a settlement reached with the British Government on the division of obligations for defence. Under the settlement, India was to be liable only for the normal peace time cost of the Army in India, adjusted in relation to the rise in prices, plus the cost of India's own immediate war measures, plus a lump sum of Rs. 1.00 lakhs towards the maintenance of external defence troops overseas. The Finance Member held that this settlement was favourable to India and was conceived by His Majesty's Government in a generous spirit. In terms of figures it worked out as follows: (1) Normal peace Defence Budget, Rs. 36.77 lakhs; (2) effect of rise of prices on (1), Rs. 25 lakhs; (3) Indian war measures, Rs. 3.86 lakhs; (4) Non-effective charges, Rs. 8.41 lakhs; Total Rs. 49.29 lakhs.

WAYS AND MEANS.

The following is a summary of the estimates of ways and means in India during 1939-40 and 1940-41.—

	Budget 1939-40	Revised, 1939-40	Budget, 1940-41.
Excess of Revenue over Expenditure	3		5
New Loan		15.72	
Treasury Bills issued (net)	—6.00	1.00	—8.00
Post Office Cash Certificates (net)	—50	—2.63	—1.50
Post Office Savings Bank Deposits (net)	5.00	—1.32	3.17
Other Unfunded Debt (net)	5.06	2.89	3.42
Discount Sinking Fund	1.18	.67	1.15
Reduction or Avoidance of Debt	5.00	3.00	3.00
Railway Depreciation Fund	6.33	5.59	5.66
Railway Reserve Fund			2.59
Posts and Telegraphs Renewals Reserve Fund	1	2	
Telephone Development Fund	—15	—23	—14
Defence Reserve and Equalisation Fund	—1.05		
Defence Modernisation Fund			
Revenue Reserve Fund		91	—91
Other Deposits and Advances (net)	14	9.83	2.51
TOTAL	11.19	32.15	11.40
OPENING BALANCE	9.47	14.13	8.59

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strict theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1793 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras. Incidentally, the Bengal system was the subject of an exhaustive examination by a Commission under the chairmanship of Sir Francis Floud in 1939-40, which produced a radical report—a minority dissenting—in favour of State purchase of land, thus challenging the Bengal system of land tenure based on the Permanent Settlement.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff or experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater

rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become final in binding; and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the Settlement Officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement and tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct; in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent, and only rarely is the proportion of one

half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago, the Government of India were invited in an infinitesimally signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit

of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces; and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the *Zemindars*, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter; its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

Since the coming into operation of provincial autonomy in April 1937, there has been a great impetus towards land revenue reform in most provinces, the primary object being to better the lot of the tenant by modifying *Zemindari* rights and usages, and by altering the system of land revenue assessment. To this end, legislation has been introduced in practically all the autonomous provinces during the years 1937 to 1939 and widespread changes are in process of being made everywhere.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing; Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M. Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Government.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors—hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete.

There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—

First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition amongst the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise was made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma

the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskeys, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

PROHIBITION.

Since the introduction of provincial autonomy in April 1937, it has become the avowed policy in principle of all provincial Governments to discourage the consumption of alcoholic beverages; but the Congress administrations since in September, 1939, went further and, before they resigned, adopted an active policy of enforcing prohibition within a period of years. The measures taken by them varied from province to province, but generally speaking, they took the form of declaring certain areas, either urban or rural, "dry," and within those areas the production, sale and consumption of liquor was banned. Thus in Madras four districts have been declared "dry"; a special excise regime has been set up and active steps are being taken to wean the populace from the use of liquor. Early reports indicated that a considerable measure of success had been attained, but more recently it has been officially admitted that "enthusiasm for prohibition is waning." In the United Provinces, Bihar, Orissa, the Central Provinces and Assam, similar steps were taken to prevent the people of certain areas from drinking alcohol.

In Bombay, the experiment (although the Congress Ministry declined to regard the scheme as experimental, holding it to be their settled policy) has gone a stage further. The second largest city in the province, Ahmedabad, has been officially "dry" since September 1938, and the capital, Bombay, did likewise in August 1939. In each case a system of personal permits is allowed. In Ahmedabad, these permits, giving the right to consume a limited number of "units" of alcohol a month, are granted to Europeans and "confirmed addicts."

In Bombay permits to consume a maximum of seven "units" a month are restricted to persons of non-Asiatic domicile. A "unit" is defined as one quart bottle of spirits, or three bottles of wine, or nine bottles of beer, and any combination or fractions of these are allowed up to a total of seven "units." Other permits are granted on a restricted scale to Parsees, to allow them to perform their religious rites, and to "confirmed addicts" who are, however, gradually limited to smaller amounts in order to wean them from the habit. In Bombay, as in Madras, newspapers and magazines published in the province are forbidden to publish liquor advertisements.

Difficulties of Enforcement.—The working of prohibition, even on this limited and "permissive" scale, has not been free from abuses and difficulties. Its enforcement places a severe strain on the authorities and numerous cases are reported of evasion and defiance of the law. In addition to smuggling into the "dry" areas and illicit distillation, a considerable exodus of workers and others not entitled to permits takes place over week-ends and holidays from the cities to adjacent areas where prohibition is not in force, and much drinking to excess is known to

result. Although Congress and orthodox opinion continues to support prohibition, it has given rise to popular resentment among certain classes and communities and also to grave legal anomalies. Thus, in Bombay, after hundreds of people had been convicted for breaches of the prohibition rules in the first eight months of its introduction, the validity of the rules was successfully challenged in April 1940 in the law courts and the Bombay High Court held that the regulations were *ultra vires* the Abkari Act of 1874.

Thereupon, in order to avoid administrative chaos, the Governor of Bombay promulgated a "Governor's Act," (the Congress Ministry having in the meantime resigned office) restoring the *status quo* and legalising the prohibition rules. But the Governor at the same time made it clear that he was not committed to prohibition in principle and reserved the right to make such further changes as might seem fit. The position in May 1940 was that a strong agitation for the repeal of prohibition was being conducted in the Press and by large sections of the public, while Congress continued to threaten "direct action" if it was repealed. Hitherto the Governors and their advisers in the half-dozen erstwhile Congress provinces have refrained from reversing the policy of their former ministries, but the future is open and it is by no means certain that prohibition will remain in force even in its limited areas and partial form.*

Apart from the moral issue, the financial implications of prohibition are far-reaching. In Bombay Province alone, Government have sacrificed a revenue of Rs. 1.40 lakhs derived from Excise, while the extension of the principle to the whole province would cost Rs. 2.50 lakhs, or about a quarter of the total provincial income. To finance the scheme, new and unpopular taxation measures have had to be imposed. Similar considerations apply to other provinces where the experiment is being tried. A further complication is caused by the existence of Indian States, whose territories are inextricably mixed with British India, and which have not yet adopted a prohibitionist policy any more than the Government of India has done. Thus the continued enforcement of prohibition is problematical alike from the administrative, financial and popular standpoints.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant *charas*, or the resinous matter which forms an active drug when collected separately; and *bang*, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licensees to retail all forms of hemp drugs are usually sold by auction. The sale of *charas* has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

* [Since these notes were written, as a result of the judgment of a full bench of the Bombay High Court which held the Bombay Prohibition Law ineffective, prohibition of foreign liquor was withdrawn as from July 2, 1940.]

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales

to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It was decided to reduce the total of the opium exported since the calendar year 1926 to 10 per cent. annually in each subsequent year until exports were totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt Range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana; salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contain an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the

remainder under license and excise systems. In the Punjab and Rajputana the salt manufacturing is under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufacturing is under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaon, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 92 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-4-0; in 1907 to Re. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Re. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas. In April 1936 the import duty was reduced to 1½ annas per maund, while the excise duty remained the same.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1906. Since that date, of the five Collectors at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (i.e., "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted

Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6d. in the pound; on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income-Tax as a means of

raising fresh revenue.

The Supplementary Finance Bill of 1931 imposed surcharges on income-tax and super-tax to meet the emergency of that year. The surcharges were subsequently scaled down in succeeding years, but were not completely abolished until after the passage of the Income-Tax (Amendment) Act of 1939. That Act itself was the sequel to an exhaustive inquiry from 1935 onwards by a committee consisting of Khan Bahadur J. B. Vachha, C.I.E., Commissioner of Income-Tax in Bombay, and Messrs. C. W. Ayers and S. P. Chambers of the British Indian Revenue Department. Their report covered a wide field and made numerous recommendations, most of which were incorporated in the Act of 1939, a summary of which is given below. Among other recommendations was that for the adoption of the "slab" system instead of the "step" system, and this was duly done in the India Budget for 1939. After the outbreak of the War in September 1939, the Finance Member made no changes in the basic rates of income-tax in his Budget for 1940-41, but he introduced an Excess Profits Tax, details of which will be found in the section on "Recent Indian Finance."

RATES OF INCOME-TAX.

BASED ON SLAB SYSTEM.

INCOME-TAX

(a) *Individuals, Unregistered Firms, Hindu Undivided Families and Associations of persons (other than Companies).—*

	First	Rs.	1,500	of income	Rate.
	Next	"	3,500	" "	Nil.
	"	"	5,000	" "	9 pies in the rupee.
	"	"	5,000	" "	1 anna 3 pies in the rupee.
				" "	2 annas in the rupee.
	Balance of income				2 annas 6 pies in the rupee.

No tax payable on incomes not exceeding Rs. 2,000; Income-Tax on incomes just above Rs. 2,000 to be restricted to half the excess of the income above Rs. 2,000.

(b) *Rate for Companies and local authorities—*2 annas 6 pies in the rupee.

SUPER-TAX.

(a) *Assessees other than Companies.—*

	First	Rs.	25,000	Rate.
	Next	"	10,000	Nil.
	"	"	20,000	1 anna in the rupee.
	"	"	70,000	2 annas in the rupee.
	"	"	70,000	3 annas in the rupee.
	"	"	75,000	4 annas in the rupee.
	"	"	1,50,000	5 annas in the rupee.
	"	"	1,50,000	6 annas in the rupee.
	Balance of income			7 annas in the rupee.

(b) *Companies and local authorities.—*

1 anna in the rupee on the whole income (no exempted slab).

No surcharge is charged in respect of either Income-Tax or Super-tax.

INCOME-TAX REFORMS.

As already mentioned, the publication of the Income-Tax Inquiry Report in 1936 was followed by important reforms and far-reaching legislation. Among the reforms was the bringing into force, as from April 1, 1939, of the "slab" system of income-tax assessment, details of which are given in the foregoing table. The post of Income-Tax Officer to the Government of India was created and Mr. S. P. Chambers was appointed to it. He later resigned in the middle of 1940.

The new Income-Tax (Amendment) Act of 1939, which was passed after protracted debate in and much modification by the Central Legislature, was intended to bring up to date the procedure of the Income-Tax Department and to render its methods more efficient. It embodied provisions designed to stop up existing loopholes and prevent evasion of income-tax law; also to adjust categories of income-tax payers so as to mulct the wealthy minority more while giving relief to the small man. The chief operative clause was Clause 4, the provisions of which are :—

In respect of foreign income, persons who are not resident in British India pay on income arising or received in British India only. Persons who are resident but not ordinarily resident in British India pay on income arising in British India and on foreign income brought into British India. Persons who are resident and ordinarily resident in British India pay on income arising in British India, on foreign income brought into British India, and also on foreign income not brought into India, with a deduction of Rs. 4,500 on the last mentioned class of income. Where foreign income-tax is payable on income arising abroad, one-half of the Indian tax, or one-half of the foreign tax, whichever is the lower, is allowed as a deduction from the tax payable. Where foreign income cannot be brought into India owing to exchange restrictions, the income-tax on that income is not collected until such time as it can be brought in.

As to the definitions of "residence," they are as follows: To be resident, a person must either be in British India for at least half the year or have a house maintained in British India and visit it at least once during the year, or have been in British India for at least 365 days out of the previous four years and visited British India at least once during the year. To be ordinarily resident, a person must have been resident for nine out of the previous ten years and must also have been in British India for 730 days in the previous seven years. A company is deemed to be resident in India if it is controlled in India or if more than half its income arises in British India.

Other important provisions of the Act are those providing for the setting up of an Appellate Tribunal (to start functioning after two years) whose personnel will consist of an equal number of judicial members and accountant members and whose purpose will be to hear appeals by assesses from the findings of the Assistant Commissioner of Income-Tax; relief to be granted in respect of life insurance premiums, provident fund contributions and superannuation contributions fund with special concessions to Hindu undivided families; the abolition of the previous exemption of leave salary, that is, salary earned in India but payable out of India to assesses while they are on leave out of the country; a changed system of depreciation allowance from the former prescribed percentage of the original cost of the asset to a prescribed percentage of the "written down value" of the asset; and finally, a most important change, extension of the liability to pay income-tax from all persons called upon by an income-tax officer to make a return, to all persons whose total income exceeded Rs. 2,000 in the previous year. This liability to pay income-tax becomes obligatory upon those whose incomes exceeded Rs. 2,000 in the previous year and failure to ask for and fill in a return form without reasonable cause involves a liability which may be as much as one and a half times the tax payable.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Ropai and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for mainly with

the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold

Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be suspended and removed

and salaries awarded as the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the

coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver.

The weight and fineness of the silver coin are:—

	FINE SILVER grains.	ALLOY grains.	TOTAL grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41½	3½	45
Eighth of a rupee or 2-anna piece (not minted since 1939).	20½	1½	22½

One rupee = 165 grains of fine silver.

One shilling = 80½ grains of fine silver.

One rupee = shillings 2·0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	Grains Troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pie being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows:—

	Standard weight in grains Troy.	Diameter in millimetres.
Pice	75	25·4
Half-pice	37½	21·15
Pie	25	17·45

Nickel.

The Act of 1906 also provided for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19·8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel has been withdrawn from circulation. In March 1939, it was announced that a new half-anna coin was to be introduced but this decision had not been implemented up to the middle of 1940. The coin was to be of cupro-nickel, of the same design as the square-cut two-anna nickel piece, but much smaller in size.

The Currency System.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell

leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be

supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and four pence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India,

issued in the Bank of England Council Bills when presented to the Government Treasury. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold

circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient

for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirtyseconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were

lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and consulted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the

amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a

passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR OF 1914-18.

The report was in the hands of the Government of India before the outbreak of the last war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000 being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand;

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(vi) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(vii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(viii) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(ix) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(x) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(xi) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(xii) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(xiii) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(xiv) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11.30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(xv) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(xvi) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during

(xvii) The import and export of gold to and from India should be free from Government control.

(xviii) The statutory minimum for the metallic portion of the Paper Currency Reserves should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(xix) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coinage purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous: an important member of the Committee, Mr. Dadabhai Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses:—

(a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(h) "Reverse" drafts on London to be sold only at 1s. 329-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 43-32d. per rupee.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling; in view of the decline in the value of sterling; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence: all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Committee's Report was issued, the effect of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings eight pence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export of foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of

by an administrative trade was almost a temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation or exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions

reached as much as 100 per cent, induced gigantic speculations. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the exchange at the high ratio, the Government had decided to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very high scale and the market rate for exchange was always twopence or threepence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohur, which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If left alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs. 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative; a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question:—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(ix) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(x) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(xi) The legal tender quality of the sovereign and the half-sovereign should be removed.

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(xiii) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(xiv) One-rupee notes should be re-introduced and should be full legal tender.

(xv) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority.

(xvi) No change should be made in the legal tender character of the silver rupee.

(xvii) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(xx) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xxi) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility in the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(xxiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(xxiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(xxvi) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s. 6d.

(xxix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(xxx) Measures should be taken to promote the development of banking in India.

(xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent.—Whilst all the members of the Commission signed the report, one of their number, Sir Parshotamas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Parshotamas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that the efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms:—

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s. 6d. is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s. 6d., the steps that the Currency Authority will have to take to maintain exchange at this rate may depict

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended."

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked:—

"What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'limping standard.' The Royal Commission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange.' Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency.....Under the Indian system, contraction is not, and never has been, automatic.'

"However, the standard limped along until the third year of the war. The exchange value of the rupee was stable; prices adjusted themselves to the ratio; Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages: it did not inspire public confidence; it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it; and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment: 'when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections.'

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Baring-tou Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control.'

"The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control automatic working and stability; to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency.—"In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

"The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz. bars; as soon as sufficient gold was available to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years; the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1·12 crore.

"This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

"The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard.—"The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity of safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

"This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetization of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

"We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India; indeed the Commission do not attempt to burke it. 'The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless. . . it has been undertaken by every other country that has adopted an effective gold standard; and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify.' It is important, therefore, to examine the reserves and the procedure thereat.

"The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows:—

Paper Currency Reserve.

	Rs. Crores.
Silver coin	77.0
Silver bullion	7.7
Gold coin and bullion	22.3
Rupee securities	57.1
Sterling securities	21.0
	<hr/> 185.1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

"The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

"In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal; and that the holding of gold, which now stands at about 12.8 per cent. should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally, they are of opinion that this would be no favourable basis for the gold holding to escape.

"The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—"The majority of the Commission, Sir Purushotamdas Thakurdas being the only dissentient, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence; the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

"One principle advanced in Sir Dadlha Dalal's prophetic minority report in 1913, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadlha went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell; the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling; in October, 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

"It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that 'the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us this issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country.'

"It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the 'conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage.' Sir Purshotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

"The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent. of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

"Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion; there would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past; it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six; the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue.—"Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupees and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900; it compelled heavy purchases of silver, which invariably rose in prices as the Government came into the market; and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48d. an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. 'No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value.' Both propositions can be accepted in their entirety.

"The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself; it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, 'and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them.'

"The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfeared. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation."

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative

Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The New Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost or transport from Bombay to London. A rate of one shilling five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the slump of 1930 made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. Since then, large exports of commercial and hoarded gold from India have served to keep the exchange ratio stable, despite much agitation for a reversion to the 1s. 4d. ratio by interested parties. Generally speaking, the tendency in the last ten years has been for the rupee to be worth more than 1s. 6d., and thus Government have found no difficulty in maintaining a stable exchange. Since the outbreak of the war in September 1939, official restrictions on exchange operations have perforce increased and caused some inconvenience to businessmen. But the rupee continues to maintain its strength and there is little doubt that, left to itself, it would appreciate in terms of foreign currencies rather than depreciate.

THE RESERVE BANK.

The following Act of the Indian Legislature received the assent of the Governor-General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934:—

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage;

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system;

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures;

It is hereby enacted as follows:—

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share Capital.—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register; and no person who is not—

(a) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty or

(c) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies

or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub-section (3) to be the Parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely:—

(a) to the Bombay register—one hundred and forty lakhs of rupees:

(b) to the Calcutta register—one hundred and forty-five lakhs of rupees:

(c) to the Delhi register—one hundred and fifteen lakhs of rupees.

(d) to the Madras register—seventy lakhs of rupees.

(e) to the Rangoon register—thirty lakhs of rupees:

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares; and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than one-fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one-

half of such remaining shares, to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital

—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Council and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in general meeting.

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital.

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council.

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares.

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere.

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which

may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

(1) The Central Board shall consist of the following Directors namely:—

(a) a Governor and two Deputy Governors, to be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf.

(b) four Directors to be nominated by the Governor General in Council.

(c) eight Directors to be elected on behalf of the shareholders on the various registers, in the manner provided in section 9 and in the following numbers, namely:—

(i) for the Bombay register—two Directors;

(ii) for the Calcutta register—two Directors;

(iii) for the Delhi register—two Directors;

(iv) for the Madras register—one Director;

(v) for the Rangoon register—one Director, and

(d) one government official to be nominated by the Governor General in Council.

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor General in Council.

(3) A Deputy Governor and the Director nominated under clause (d) of sub-section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote.

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him.

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council may fix when appointing them, and shall be eligible for re-appointment.

A Director nominated under clause (b) or elected under clause (c) of sub-section (1) shall hold office for five years, or thereafter until his successor shall have been duly nominated or elected, and, subject to the provisions of section 10, shall be eligible for re-nomination or re-election.

A Director nominated under clause (d) of sub-section (1) shall hold office during the pleasure of the Governor General in Council.

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of the Board.

Local Boards.—(1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of—

(a) five members elected from amongst themselves by the shareholders who are registered on the register for that area and are qualified to vote, and

(b) not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area, who may be nominated at any time.

Provided that the Central Board shall in exercising this power of nomination aim at securing the representation of territorial or economic interests not already represented, and in particular the representation of agricultural interests and the interests of co-operative banks.

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the register for that area, for a period of not less than six months ending with the date of the election, as holding five shares shall have one vote, and each shareholder so registered as having more than five shares shall have one vote for each five shares, but subject to a maximum of ten votes, and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an employee of the Bank.

(3) The members of a Local Board shall hold office until they vacate it under sub-section (6) and, subject to the provisions of section 10, shall be eligible for re-election or re-nomination, as the case may be.

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act, the Central Board shall direct an election to be held of members of the Local Board concerned, and shall specify a date from which the registration of transfer from and to the register shall be suspended until the election has taken place.

(5) On the issue of such direction the Local Board shall give notice of the date of the election and shall publish a list of shareholders holding five or more shares, with the dates on which their shares were registered, and with their registered addresses, and such list shall be available for purchase not less than three weeks before the date fixed for the election.

(6) The names of the persons elected shall be notified to the Central Board which shall thereupon proceed to make any nominations permitted by clause (b) of sub-section (1) it may then decide to make, and shall fix the date on which the outgoing members of the Local Board shall vacate office, and the incoming members shall be deemed to have assumed office on that date.

(7) The elected members of a Local Board shall as soon as may be after they have been elected, elect from amongst themselves one or two persons, as the case may be, to be Directors representing to the shareholders on the register for the area for which the Board is constituted.

(8) A Local Board shall advise the Central Board on such matters as may be generally or specifically referred to it and shall perform such duties as the Board may by regulations, delegate to it,

(1) No person may be a Director or a member of a Local Board who—

(a) is a salaried government official or a salaried official of a State in India, or

(b) is, or at any time has been, adjudicated an insolvent, or has suspended payment or has compounded with his creditors, or

(c) is found lunatic or becomes of unsound mind, or

(d) is an officer or employee of any bank, or

(e) is a director of any bank, other than a bank which is a society registered or deemed to be registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies.

(2) No two persons who are partners of the same mercantile firm, or are directors of the same private company, or one of whom is the general agent of or holds a power of procuration from the other, or from a mercantile firm of which the other is a partner, may be Directors or members of the same Local Board at the same time.

(3) Nothing in clause (a), clause (d) or clause (e) of sub-section (1) shall apply to the Governor, or to a Deputy Governor or to the Director nominated under clause (d) of sub-section (1) of section 8.

(1) The Governor General in Council may remove from office the Governor, or a Deputy Governor or any nominated or elected Director.

Provided that in the case of a Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8 this power shall be exercised only on a resolution passed by the Central Board in that behalf by a majority consisting of not less than nine Directors.

(2) A Director nominated or elected under clause (b) or clause (c) of sub-section (1) of section 8, and any member of a Local Board shall cease to hold office if, at any time after six months from the date of his nomination or election, he is not registered as a holder of unencumbered shares of the Bank of a nominal value of not less than five thousand rupees, or if he ceases to hold unencumbered shares of that value, and any such Director shall cease to hold office if without leave from the Governor General in Council he absents himself from three consecutive meetings of the Central Board convened under sub-section (1) of section 13.

(3) The Governor General in Council shall remove from office any Director, and the Central Board shall remove from office any member of a Local Board, if such Director or member becomes subject to any of the disqualifications specified in sub-section (1) or sub-section (2) of section 10.

(4) A Director or member of a Local Board ceasing to hold office under the provisions of sections 13 or 14 shall not be eligible for re-election either as Director or as member of a Local Board until the expiry of the term for which his appointment was made.

(5) The appointment, nomination or election as Director or member of a Local Board of any person who is a member of the Indian Legislature or of a local Legislature shall be void,

unless, within two months of the date of his appointment, nomination or election, he ceases to be such member, and, if any Director or member of a Local Board is elected or nominated as a member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be.

(6) A Director may resign his office to the Governor General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant.

(1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment, the Governor General in Council may, after consideration of the recommendations made by the Central Board in this behalf, appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (d) of sub-section (1) of section 10, be an officer of the Bank.

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director.

(3) Where any casual vacancy in the office of any member of a Local Board occurs otherwise than by the occurrence of a vacancy in the office of a Director elected by the Local Board, the Central Board may nominate thereto any qualified person recommended by the elected members of the Local Board.

(4) Where any casual vacancy occurs in the office of a Director other than the vacancies provided for in sub-section (1), the vacancy shall be filled, in the case of a nominated Director by nomination, and in the case of an elected Director by election held in the manner provided in section 9 for the election of Directors.

Provided that before such election is made the resulting vacancy, if any, in the Local Board and any vacancy in the office of an elected member of such Board which may have been filled by a member nominated under sub-section (3) shall be filled by election held as nearly as may be in the manner provided in section 9 for the election of members of a Local Board.

(5) A person nominated or elected under this section to fill a casual vacancy shall, subject to the proviso contained in sub-section (4), hold office for the unexpired portion of the term of his predecessor.

(1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter.

(2) Any three Directors may require the Governor to convene a meeting of the Central Board at any time and the Governor shall forthwith convene a meeting accordingly.

(3) The Governor, or in his absence the Deputy Governor authorized by the Governor under the proviso to sub-section (3) of section 8 to vote

for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall have a second or casting vote.

General Meetings.—(1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually at a place where there is an office of the Bank within six weeks from the date on which the annual accounts of the Bank are closed, and a general meeting may be convened by the Central Board at any other time:

Provided that the annual general meeting shall not be held on two consecutive occasions at any one place.

(2) The shareholders present at a general meeting shall be entitled to discuss the annual accounts, the report of the Central Board on the working of the Bank throughout the year and the auditors' report on the annual balance-sheet and accounts.

(3) Every shareholder shall be entitled to attend at any general meeting and each shareholder who has been registered on any register, for a period of not less than six months ending with the date of the meeting, as holding five or more shares shall have one vote and on a poll being demanded each shareholder so registered shall have one vote for each five shares, but subject to a maximum of ten votes and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an officer or employee of the Bank.

(1) The following provisions shall apply to the first constitution of the Central Board, and, notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act.

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor General in Council on his own initiative, and shall receive such salaries and allowances as he may determine.

(3) The first eight Directors representing the shareholders on the various registers shall be nominated by the Governor General in Council from the areas served respectively by those registers, and the Directors so nominated shall hold office until their successors shall have been duly elected as provided in sub-section (4).

(4) On the expiry of each successive period of twelve months after the nomination of Directors under sub-section (3) two Directors shall be elected in the manner provided in section 9 until all the Directors so nominated have been replaced by elected Directors holding office in accordance with section 8. The register in respect of which the election is to be held shall be selected by lot from among the registers still represented by nominated Directors, and for the purposes of such lot the Madras and Rangoon registers shall be treated as if they comprised one register only.

As soon as may be after the commencement of this Act, the Central Board shall direct elections to be held and may make nominations, in order to constitute Local Boards in accordance with the provision of section 9, and the

members of such Local Boards shall hold office up to the date fixed under sub-section (6) of section 9 but shall not exercise any right under sub-section (7) of that section.

Business.—The Bank shall be authorized to carry on and transact the several kinds of business hereinafter specified, namely :—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor General in Council, Local Governments, States in India, local authorities, banks and any other persons ;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and arising out of *bona fide* commercial or trade transactions bearing two or more good signatures, one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace ;

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and bearing two or more good signatures, one of which shall be that of a scheduled bank, or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within nine months from the date of such purchase or rediscount, exclusive of days of grace ;

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace ;

(3) (a) the purchase from and sale to scheduled banks of sterling in amounts of not less than the equivalent of one lakh of rupees ;

(b) the purchase, sale and rediscount of bills of exchange (including treasury bills) drawn in or on any place in the United Kingdom and maturing within ninety days from the date of purchase, provided that no such purchase, sale or rediscount shall be made in India except with a scheduled bank ; and

(c) the keeping of balances with banks in the United Kingdom ;

(4) the making to States in India, local authorities, scheduled banks and provincial co-operative banks of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorized to invest trust money by any Act of Parliament or by any law for the time being in force in British India ;

(b) gold or silver or documents of title to the same ;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank ;

(d) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents of title to goods which have been transferred, assigned, or pledged to any such bank as security for a cash credit or overdraft granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops ;

(5) the making to the Governor General in Council and to such Local Governments as may have the custody and management of their own provincial revenues of advances repayable in each case not later than three months from the date of the making of the advance ;

(6) the issue of demand drafts made payable at its own offices or agencies and the making, issue and circulation of bank post bills ;

(7) the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of such purchase ;

(8) the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board ;

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority or a State in India shall be deemed for the purposes of this clause to be securities of such Government, authority or State ;

Provided further that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and three-fifths of the liabilities of the Banking Department in respect of deposits ;

(b) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits ; and

(c) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits ;

(9) The custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividends, of any such securities ;

(10) the sale and realisation of all property, whether movable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims ;

(11) the acting as agent for the Secretary of State in Council, the Governor General in Council for any Local Government or local authority of State in India in the transaction of any of the following kinds of business, namely:—

- (a) the purchase and sale of gold or silver;
- (b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company;
- (c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares;
- (d) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere;
- (e) the management of public debt;

(12) the purchase and sale of gold coin and bullion;

(13) the opening of an account with or the making of an agency agreement with, and the acting as agent or correspondent of a bank, which is the principal currency authority of any country under the law for the time being in force in that country or any international bank formed by such banks, and the investing of the funds of the Bank in the shares of any such international bank;

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed:

Provided that no money shall be borrowed under this clause from any person in India other than a schedule bank, or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country:

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank;

(15) the making and issue of bank notes subject to the provision of this Act; and

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act.

When, in the opinion of the Central Board or, where the powers and functions of the Central Board under this section have been delegated to a committee of the Central Board or to the Governor, in the opinion of such committee or of the Governor as the case may be, a special occasion has arisen making it necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any limitation contained in sub-clauses (a) and (b) of clause (2) or sub-clause (a) or (b) of clause (3) or clause (4) of section 17.—

(1) purchase, sell or discount any of the bills of exchange or promissory notes specified in sub-clause (a) or (b) of clause (2) or sub-clause (b) of clause (3) of that section though such bill

or promissory note does not bear the signature of a scheduled bank or a provincial co-operative bank; or

(2) purchase or sell sterling in amounts of not less than the equivalent of one lakh of rupees; or

(3) make loans or advances repayable on demand or on the expiry of fixed periods not exceeding ninety days against the various forms of security specified in clause (4) of that section:

Provided that a committee of the Board or the Governor shall not, save in cases of special urgency, authorized action under this section without prior consultation with the Central Board and that in all cases action so authorized shall be reported to the members of the Central Board forthwith.

Forbidden Business.—Save as otherwise provided in sections 17, 18 and 45, the Bank may not

(1) engage in trade or otherwise have a direct interest in any commercial, industrial or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims; provided that all such interests shall be disposed of at the earliest possible moment;

(2) purchase its own shares or the shares to any other bank or of any company, or grant loans upon the security of any such shares;

(3) advance money on mortgage of, or otherwise on the security of, immovable property or documents of title relating thereto, or become the owner of immovable property, except so far as is necessary for its own business premises and residences for its officers and servants;

(4) make loans or advances;

(5) draw or accept bills payable otherwise than on demand;

(6) allow interest on deposits or current accounts.

Central Banking Functions.

The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the Gazette of India, and to make payments up to the amount standing to the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt.

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions as may be agreed upon, with all their money, remittance, exchange and banking transactions in India and, in particular, shall deposit free of interest all their cash balances with the Bank

Provided that nothing in this sub-section shall prevent the Governor General in Council or any Local Government from carrying on

money transactions at places where the Bank has no branches or agencies, and the Governor General in Council and Local Governments may hold at such places such balances as they may require.

(2) The Governor General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon, with the management of the public debt and with the issue of any new loans.

(3) In the event of any failure to reach agreement on the conditions referred to in this section the Governor General in Council shall decide what the conditions shall be.

(4) Any agreement made under this section to which the Governor General in Council or any Local Government is a party shall be laid, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also.

Bank Notes.—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the date on which this Chapter comes into force the Governor General in Council shall not issue any currency notes.

Issue Department.—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34.

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Bank notes shall be of the denominational values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor General in Council on the recommendation of the Central Board.

The design, form and material of bank notes shall be such as may be approved by the Governor General in Council after consideration of the recommendations made by the Central Board.

(1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council.

(2) On recommendation of the Central Board the Governor General in Council may, by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note:

Provided that the Bank may, with the previous sanction of the Governor General in Council, prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature.

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

(1) If in the opinion of the Governor General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor General in Council may determine, and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act.

(2) When action is taken under this section the Governor General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person:

Provided that cheques or drafts, including hundis, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

(1) Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(2) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

(1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(2) Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or sterling securities :

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value.

(3) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 18 :

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees.

(4) For the purposes of this section, gold coin and gold bullion shall be valued at 8.47512 grains of fine gold per rupee, rupee coin shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.

(5) Of the gold coin and gold bullion held as assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies.

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets.

(6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely :—

(a) balances at the credit of the Issue Department with the Bank of England ;

(b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days ;

(c) government securities of the United Kingdom maturing within five years :

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section 17.

Liabilities of the Issue Department.—(1) The liabilities of the Issue Department shall be an amount equal to the total of the

amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub-section (2) of section 23, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be ; but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33 :

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees.

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold standard reserve and the paper currency reserve at the time of transfer shall be so transferred.

(1) After the close of any financial year in which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub-section (1) of section 53, is greater than fifty crores of rupees or one-sixth of the total amount of the assets as shown in that account, whichever may be the greater the Bank may deliver to the Governor General in Council rupee coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form of bank notes, gold or securities :

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and sterling securities in the assets does not at that time exceed one-half of the total assets, a proportion not exceeding two-fifths of such payment shall be in gold coin, gold bullion or such sterling securities as may be held as part of the assets under sub-section (6) of section 33.

(2) After the close of any financial year in which the maximum amount of rupee coin held in the assets, as so shown, is less than fifty crores of rupees or one-sixth of the total amount of the assets, as so shown, whichever may be

the greater the Governor General in Council shall deliver to the Bank rupee coin up to the amount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value.

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securities of less aggregate amount than that required by sub-section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative.

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub-section (2) of section 33 so long as any sterling securities remain held as such assets.

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum "prescribed by sub-section (2) of section 33; and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent. per annum when such holding exceeds thirty-two and a half per cent. of the total amount of the assets and of a further one and a half per cent. per annum in respect of every further decrease, of two and a half per cent. or part of such decrease :

Provided that the tax shall not in any event be payable at a rate less than six per cent. per annum.

The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any rupees, except through the Bank and as provided in that section; and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor General in Council under that section.

(1) The Bank shall issue rupee coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906.

(2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation; and the Governor General in Council shall supply such coins to the Bank on demand. If the Governor General in Council at any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public.

Obligation to sell sterling.—The Bank shall sell, to any person who makes a demand in that behalf at its office in Bombay, Calcutta,

Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty nine sixty-fourths of a penny for a rupee:

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee.

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds.

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made.

Cash reserves of scheduled banks.—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent. of the demand liabilities and two per cent. of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Explanation.—For the purposes of this section liabilities shall not include the paid-up capital or the reserves, or any credit balance in the profits and loss account of the bank or the amount of any loan taken from the Reserve Bank.

(2) Every scheduled bank shall send to the Governor General in Council and to the Bank a return signed by two responsible officers of such bank showing—

(a) the amounts of its demand and time liabilities, respectively, in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin, respectively,

(d) the amounts of advances made and of bills discounted in India, respectively and

(e) the balance held at the Bank, at the close of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day; and such return shall be sent not later than two working days after the date to which it relates :

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub-section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub-section in respect of such bank at the close of business for the month.

(3) If at the close of business on any day before the day fixed for the next return, the balance held at the Bank by any scheduled bank is below the minimum prescribed in sub-section (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day penal interest at a rate three per cent. above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent. above the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.

(4) Any scheduled bank failing to comply with the provisions of sub-section (2) shall be liable to pay to the Governor General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.

(5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor General in Council in the case of a failure to make a return under sub-section (2) to the Governor General in Council, or by the Bank with the previous sanction of the Governor General in Council in other cases.

(6) The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and which—

(a) has a paid-up capital and reserves of an aggregate value of not less than five lakhs of rupees, and

(b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or a company incorporated by or under any law in force in any place outside British India,

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid-up capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from scheduled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transactions under section 17 to furnish the return referred to in sub-section (2) of section 42, and if it does so, the provisions of sub-sections

(4) and (5) of section 42 shall apply so far as may be to such co-operative banks as if it were a scheduled bank.

Agreement with the Imperial Bank—

(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule:

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfil the conditions of the Agreement or to maintain a sound financial position, the Central Board shall make a recommendation to the Governor General in Council, and the Governor General in Council, after making such further enquiry as he thinks fit, may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the assets of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall, as soon as may be after it is made, be laid before the Central Legislature.

General Provisions.

The Governor General in Council shall transfer to the Bank rupee securities of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council:

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits or gains.

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities."

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act.

(1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office.

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections.

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Without prejudice to anything contained in section 50, the Governor General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank.

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto; and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank.

(2) The auditors shall make a report to the shareholders or to the Governor General in Council, as the case may be, upon the annual balance-sheet and accounts and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read together with the report of the Central Board, at the annual general meeting.

Returns.—(1) The Bank shall prepare and transmit to the Governor General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form

as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors, together with a report by the Central Board on the working of the Bank throughout the year, and the Governor General in Council shall cause such accounts and report to be published in the Gazette of India.

(3) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank.

Agricultural Credit Department.—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor General in Council, Local Governments, provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit.

(1) The Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Governor General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely:—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking, and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank.

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor General in Council.

(1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said register of which he is the owner.

(2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name, the Local Board may amend the register accordingly.

(3) If any person required to make a declaration under sub-section (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the register recording such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that register.

(4) Whoever makes a false statement in any declaration furnished by him under sub-section (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 193 of that Code.

(5) Nothing contained in any declaration furnished under sub-section (1) shall operate to affect the Bank with notice of any trust, and no notice of any trust expressed, implied or constructive shall be entered on the register or be receivable by the Bank.

(6) Until Local Boards have been constituted under section 9 the powers of a Local Board under this section shall be exercised by the Central Board in respect of any area for which a Local Board has not been constituted.

(1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of seventy-five per cent. and twenty-five per cent. respectively:

Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than one per cent for each year after the commencement of this Act subject to a maximum of twenty-five per cent.

(1) The Central Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act.

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely:—

(a) the holding and conduct of elections under this Act, including provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote;

(b) the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections;

(c) the maintenance of the share register, the manner in which and the conditions subject to which shares may be held and transferred, and, generally, all matters relating to the rights and duties of shareholders;

(d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised;

(e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons;

(f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof;

(g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions;

(h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank;

(i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees;

(j) the constitution and management of staff and superannuation funds for the officers and servants of the Bank;

(k) the manner and form in which contracts binding on the Bank may be executed;

(l) the provision of an official seal of the Bank and the manner and effect of its use;

(m) the manner and form in which the balance-sheet of the Bank shall be drawn up and in which the accounts shall be maintained;

(n) the remuneration of Directors of the Bank,

(o) the relations of the scheduled banks with the Bank and the returns to be submitted by the scheduled banks to the Bank;

(p) the regulation of clearing-houses for the scheduled banks;

(q) the circumstances in which, and the conditions and limitations subject to which the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded; and

(r) generally, for the efficient conduct of the business of the Bank.

(3) Copies of all regulations made under this section shall be available to the public on payment.

In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely:—

“11. Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment on or account, but such coins shall be received

by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8.47512 grains troy of fine gold per rupee."

The Indian Paper Currency Act, 1923, the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927 are hereby repealed.

In sub-section (3) of section 11 of the Indian Companies Act, 1913, after the word "Royal" the words "Reserve Bank" shall be inserted.

The Reserve Bank began work with the opening of the financial year 1935-36. The Bank made a net profit of Rs. 53,42,100 for the year ended December 31, 1936.

REPORT FOR 1939.

The report of the Central Board of Directors of the Reserve Bank of India for the year ended December 31, 1939 states that after payment of expenses of administration and provision for sundry liabilities and contingencies, the net profit amounts to Rs. 22,50,356. Of this amount, the sum of Rs. 17,50,000 is utilized for payment to shareholders of a dividend at the rate of $3\frac{1}{2}$ per cent. per annum, being the cumulative rate fixed by the Central Government in accordance with section 47 of the Reserve Bank of India Act, 1934, leaving a surplus of Rs. 5,00,356 for payment to the Central Government in accordance with the said section.

Number of Shareholders.

The total number of shareholders decreased from 59,777 to 57,192 during the year, as a result of which the average number of shares held by each shareholder increased from 8.4 to 8.7. Thus the tendency for the Bank's shares to become concentrated in fewer hands, which has been referred to in previous reports, has continued and the total number of shareholders since the inception of the Bank has declined by nearly 38 per cent. As regards the distribution of shares between the various areas, while the number of shares on the Rangoon register remained more or less unchanged during the year, the numbers on the Bombay register and to a extent on the Madras register increased at the expense of Calcutta and Delhi. Proposals to limit the maximum number of shares an individual shareholder may hold have been put forward.

In January 1938 the Reserve Bank issued its own notes of the denomination of Rs. 5 and Rs. 10. This was followed later the same year by the issue of bank notes of the denominations of Rs. 100, Rs. 1,000, and Rs. 10,000. During 1939 Burma Bank notes of the denominations of Rs. 100, Rs. 1,000, and Rs. 10,000 were issued. With a view to speeding up the change-over from the overprinted Government of India notes to Burma Bank notes, steps were also taken to stop the reissues of over-printed notes, and it was expected that the issues of such notes would cease entirely after the 31st March 1940.

Scheduled Banks.

The development of the scheduled banks continued during 1939. Seven more banks were included in the second schedule to the Reserve Bank Act in the course of the year while three banks were excluded. The banks so excluded were Balthazar and Son, who went out of the

schedule owing to a change in their constitution, the P. and O. Banking Corporation, which was amalgamated with the Chartered Bank of India, Australia and China, and the Travancore National and Quilon Bank, which had suspended payment in June 1938 and which was formally excluded from the schedule during the year under report. The total number of scheduled banks at the end of the year was therefore 61 as against 57 last year. The tendency for banks to increase their paid-up capital so as to be eligible for inclusion was particularly marked and may to a certain extent be attributed to a desire to secure the exemptions given to schedule banks from the operation of the debt legislation in various provinces and to acquire the status of banks scheduled under the Reserve Bank Act.

Banking Legislation.

During the year the Central Board gave detailed consideration to the question of banking legislation for India. A series of proposals, drafted for purposes of clarity in the form of a bank bill, was submitted to the Central Government for their consideration in November 1939 and circulated by them for the views of the public. They do not purport to cover the whole range of problems connected with the provision of credit. All the Reserve Bank wish to secure at this stage is the limited but essential preliminary of a net-work of properly run and financially sound banking institutions which will enable them to co-ordinate the credit structure of the country, and more fully utilise the powers of extending credit provided by the Reserve Bank Act.

The main features of the proposals may be summarised as follows. In the first place they try to achieve a simpler and more restricted definition of banking and banking companies than the one given in Section 277F of the Indian Companies Act and to remedy the existing anomaly under Section 277(G)(1) of that Act under which institutions incorporated prior to the 15th January 1937 may continue to call themselves banks and yet refuse to comply with the statutory provisions relating to banking companies. Secondly, they seek to ensure that an institution has sufficient capital to enable it to make a large enough to make it possible for it to make a reasonable working profit, even if it confines itself to proper banking business, and that banks with inadequate resources will not open branches in the larger towns where the needs of the public are already being reasonably well catered for.

The bill also seeks to prescribe certain statutory proportions between the authorised, subscribed and paid-up capital of banking companies in order to stop the scandal of issuing prospectuses with a very large authorised capital and then commencing business irrespective of the amount subscribed or paid-up while the entirely imaginary figure of the authorised capital still remains on their advertisements to gull the unwary. Thirdly the bill contemplates certain moderate restrictions on bank investments in order to protect the depositors and further for protecting British Indian depositors in the case of banks incorporated outside British India. Lastly an attempt has been made to provide for expediting and simplifying liquidation proceedings so that in the event of a bank failing, the depositors may be paid off with the minimum delay and litigation expense.

India is pre-eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—cotton, jute and seeds. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past, the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples declined to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such years as 1896-97 and 1899-1900. Much of the cultivable area of the Punjab is under irrigation, and huge new works have utilised the waters of the Sutlej and of the Indus in Sind. Whilst these great works have been carried out to spill on the land the floods of the snowfed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are harnessed to preserve their flood waters for Madras.

But whilst India is pre-eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing

industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Sholapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa, the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan. The iron and steel industry is for the most part a home industry though large quantities of Indian pig iron are shipped to the Far East. The sugar manufacturing industry has grown by leaps and bounds in recent years. Therefore, whilst India is still in the main an agricultural country, three-quarters of her population drawing their sustenance from the soil, her manufacturing industries are of large and growing importance, and their prosperity every year affects in an increasing degree the general prosperity of the people.

I.—GENERAL.

Agricultural Conditions in India.—In spite of her rapid industrialization in the last twenty-five years India still remains predominantly an agricultural country and her well-being greatly depends on the prosperity of her large agricultural population. In the depression which started at the end of 1929 agricultural and raw-material producing countries suffered even more severely than industrial countries and the Indian cultivator was in sore distress on account of the disastrous slump in agricultural prices. When the upward movement started in 1932-33 the rise in the prices of commodities in which he was interested was painfully slow and halting and it was only in the middle of 1936 that primary commodities began their definite upward movement. By the spring of 1937 they had attained peak levels. But these boom conditions were too artificial to last and April 1937 witnessed a sudden reversal of the upward trend in business conditions. Prices in the commodity and share markets fell sharply and confidence in the future was again rudely shaken.

The depression in agricultural commodities which started in the latter part of 1937 continued during most months of the year under review. In 1938-39 there was only one period when this downward trend in commodity prices was arrested and slightly reversed. In June 1938 conditions in America appeared to have taken a turn for the better. Confidence was returning to the stocks and commodity markets and prices registered some definite gains. This slight recovery in American conditions spread itself to the rest of the world and it was felt that the tide had turned and that better conditions were soon to return. This upward swing lasted for a few months, but the European political crisis

which gathered force in September arrested his ineffectual recovery, and uncertainty and nervousness adversely influenced the business outlook thenceforward. As a result, prices of many commodities resumed their downward march. India as a predominantly agricultural country suffered from the political development. Prices of many of India's staple articles continued on a low level after the sharp fall in the latter part of 1937-38.

Prices of commodities had fallen precipitously in the later months of 1937-38. In the year under review the decline was not so sharp but prices were on an average much lower than in the preceding year. Thus the price of raw cotton at Bombay stood at Rs 165 at the end of March 1938 and at Rs 153 in March 1939, a decline of 7 per cent. It may be mentioned however that the average price for the year 1937-38 was about Rs 187, the average price for the year under review was Rs 153 or a decrease of over 18 per cent. Similarly, though wheat prices did not fall sharply in the year, yet for the year 1938-39 as a whole they were much lower than in the previous year. The average price of wheat (Lyallpur White) in India during 1937-38 was Rs. 3.1 per maund; it stood at Rs. 2.2-11 during 1938-39, a decline of nearly 29 per cent. The average price of groundnut declined from Rs. 29.8-7 per candy of 500 lbs. in 1937-38 to Rs. 24.8-10 in 1938-39 or by 17 per cent and that of linseed from Rs. 7-14-51 per cwt in the preceding year to Rs. 7-1-3 in the year under review, a fall of 10 per cent. The price of rice kept remarkably steady in the year 1938-39 as a result of the short crop in India. The other important exception to the general trend of agricultural prices was raw jute, but even here the quotation rose rapidly only after December 1938, the earlier

rise being due to the short crop of jute. But with the Ordinance, followed by the Agreement, restricting working hours in jute mills, prices of raw jute rose sharply. The quotation of raw jute, firsts, per bale of 400 lbs. was Rs. 30-7 in April 1938; by the end of the year it had increased to Rs. 47-12 a rise of 57 per cent. Except for raw jute and rice, prices of which were affected by short crops and other conditions peculiar to them, the prices of all other agricultural products in India were on a much lower level than in the preceding year, but the actual fall in the year was not as sharp as in the later months of 1937. In other words, prices probably reached their bottom in the year under review, but business conditions were so unfavourable that they more or less fluctuated round these low levels.

Balance of Trade.—The turnover of India's overseas trade in merchandise for the year 1938-39 suffered a substantial reduction as compared with 1937-38. Imports declined from Rs. 173 crores to Rs. 152 crores or by 12 per cent and exports from Rs. 189 crores to Rs. 169 crores or by 11 per cent, thus showing that the fall in imports was approximately commensurate with that in exports over the year as a whole. As a consequence the surplus of exports over imports of private merchandise was little disturbed and amounted to Rs. 17 crores in 1938-39 as compared with Rs. 16 crores in 1937-38.

The visible balance of trade as measured by

statistics of merchandise and treasure was in favour of India to the extent of Rs. 29 crores as compared with Rs. 30 crores in 1937-38. The balance of remittances of funds in the year under review was minus Rs. 33 crores as compared with minus Rs. 30 crores in the preceding year. The figures relating to remittances include the more important Government transactions but do not take into account (a) net payments in India of British postal orders and of foreign money orders of countries which settle their accounts through London and (b) Government transfers on account of Iraq and Mauritius. The net payments in respect of the former amounted to Rs. 64 lakhs in 1938-39 as against Rs. 52 lakhs in the preceding year, while there were no transactions under the latter head during 1937-38 and 1938-39. Taking India and Burma together as an economic unit for this purpose, there was a favourable balance to the extent of Rs. 56 crores as compared with Rs. 58 crores in 1937-38, the balance of remittances of funds being minus Rs. 34 crores almost the same as in the preceding year. The following table shows in detail the position of India's balance of trade on pre-separation as well as post-separation basis. The invisible items that enter into India's balance of accounts such as shipping services, private remittances and export and imports of capital, insurances, tourists' expenditure, etc., are not included in the table as these cannot be estimated accurately.

NOTE.—The sign + means net exports and the sign - net imports.

(a) Exclusive of the value of railway materials imported direct by State Railways working under company management, which was not paid for in the ordinary way and was not, therefore, taken into account in arriving at the balance of trade.

(b) Inclusive of figures for Burma for which separate statistics are not available.

* Figures relate to the period October, 1938 to March, 1939.

II—IMPORTS OF MERCHANDISE.

The following table shows the comparative importance of the principal articles imported into British India:—

NOTE—Consequent upon the separation of Burma the foreign trade statistics of British India for 1937-38 and 1938-39 include the trade of British India with Burma but exclude the trade of Burma with foreign countries other than British India. Direct comparison with the figures recorded for the years prior to 1937-38 is therefore vitiated. With a view to remedying this defect attempts have been made to adjust the figures for the year 1936-37 so as to afford a comparison with those for 1937-38 and 1938-39 and the results are embodied in this Review. It should be distinctly understood that these adjustments have been carried out in so far as the available data permit and the figures for the year 1936-37, thus revised, are necessarily approximate, but sufficiently accurate to provide a basis for analyzing the trade in essential details.

Cotton manufactures (Rs. 14.15 lakhs).—

The total value of cotton manufactures imported into British India during 1938-39 was Rs. 14 crores as compared with Rs. 15½ crores in the preceding year and showed a drop of Rs. 1½ crores or 9 per cent. Imports of twist and yarn advanced in quantity from 22 million pounds in 1937-38 to over 36 million pounds in 1938-39 or by 64 per cent, the corresponding increase in value being from Rs. 2.51 lakhs to Rs. 2.93 lakhs, or 17 per cent. The average declared value per pound of imported twist and yarn fell from Rs. 1-2-3 in 1937-38 to 12 as 10 p in 1938-39.

Imports during 1938-39 were largely concentrated on higher counts, e.g. 41-40 and above No. 40 and on twofolds (doubles). Imports of all these descriptions, including relatively small groups of coarser counts, etc., 1-20 and 21-25 were on a larger scale. It may be noted that the United Kingdom did not participate in this increase. She had to curtail considerably her production in 1938, which, for certain periods, was not more than 50 per cent of full capacity. The production of Indian yarn continued to show an increase which was distributed over all classes. It may be interesting to observe that the production of finer counts above No. 40 is steadily on the increase. Of the total imports, the United Kingdom supplied 13 per cent and Japan 58 per cent as compared with 30 per cent, and 67 per cent, respectively, in the preceding year. China, whose main ports have passed in the hands of the Japanese, was able to increase her share to 29 per cent in 1938-39.

The imports of cotton piecegoods into British India totalled 647 million yards in 1938-39 and showed an increase of 56 million yards or 9 per cent as compared with the preceding year. Lower prices, however, accounted for a decline of 12 per cent in value from Rs. 11.69 lakhs to Rs. 10.27 lakhs. There was an increase under grey goods, while white and coloured goods showed decreases. The increase in grey goods was shared mostly by Japan, and, while the United Kingdom suffered considerable losses in white and coloured goods, there were larger consignments of white goods from Japan. In coloured goods, the supplies from Japan, however, showed a moderate decrease. Expressed in percentages, imports of grey goods from Japan rose by 108 per cent over those in 1937-38, the corresponding increase in the case of the United Kingdom being 25 per cent. In the case of white goods, largely imported from the United Kingdom, Japan gained 8 per cent, while the United Kingdom reduced her supplies by 21 per cent. Under coloured goods, imports from the United Kingdom declined by 36 per cent, and those from Japan by three per cent.

Under grey goods, the largest increase occurred under longcloth and shirtings and dhuties saris and scarves, the two most important items included in this group. All the descriptions of white goods, with the exception of dhutis, saris and scarves, a relatively small item in this class, showed marked decreases. In the coloured section, the decrease was more marked in the case of un-pecked descriptions and cambrics than in shirtings or in drills and jeans.

The following table shows the percentage shares of the United Kingdom and Japan in the imports of piecegoods during the last three years —

	GREY		WHITE		COLOURED, ETC.	
	United Kingdom	Japan	United Kingdom	Japan	United Kingdom	Japan
1936-37	20.7	78.3	74.2	22.1	44.6	51.2
1937-38	18.0	81.8	63.6	32.1	44.6	51.8
1938-39	11.6	88.0	57.0	39.1	34.8	61.0

In each of the three main classes, Japan improved her relative position in the trade at the expense of the United Kingdom, the latter, however, maintained her leading position in bleached goods.

Imports of tents declined from 6.2 million lbs. valued at Rs. 43 lakhs to 4.9 million lbs. valued at Rs. 35 lakhs in the year under review. Of the total imports in 1938-39 cotton tents accounted for 4.8 million lbs. (23.7 million yards) valued at Rs. 33½ lakhs as compared with 5.8 million lbs. (27.3 million yards) valued at Rs. 40½ lakhs in the preceding year. Supplies from Japan and the United Kingdom were on a reduced scale, being valued at Rs. 15 lakhs and Rs. 10 lakhs as against Rs. 17 lakhs and Rs. 16 lakhs, respectively, in 1937-38. Imports from the United States of America, however, remained fairly steady at a little over Rs. 9 lakhs.

Wool, raw and manufactured (Rs. 2.82 lakhs).—

Imports of raw wool and woollen manufactures in the year under review showed a marked decline and were valued at Rs. 2.82 lakhs as against Rs. 4.15 lakhs in 1937-38. Imports of raw wool, generally for consumption in Indian mills, totalled 7.3 million lbs. valued at Rs. 62 lakhs as compared with 8.2 million lbs. valued at Rs. 85 lakhs in the preceding year. Supplies from Australia declined from nearly 5 million lbs. (Rs. 50 lakhs) to 4.4 million lbs. (Rs. 35½ lakhs) while those from the United Kingdom increased in quantity from 2.1 million lbs. to 2.5 million lbs. with a decrease in value from Rs. 27 lakhs to Rs. 25 lakhs. Worsted yarn was in better demand, imports of which advanced from 1.6 million lbs. to 2.2 million lbs.; but those of knitting wool remained almost at the level of the preceding year and amounted

to 1.2 million lbs. in 1938-39. In both these lines Japan was the leading supplier having sent 1.8 million lbs. of worsted yarn and 853,000 lbs. of knitting wool during the year under review. Or the remainder Poland was responsible for 335,000 lbs. of worsted yarn and the United Kingdom for 205,000 lbs. of knitting wool. There was a decrease in the imports of woollen and worsted piecegoods which amounted to 2.5 million yards (1.4 million lbs.) valued at Rs. 45 lakhs as against 6.7 million yards (3.3 million lbs.) valued at Rs. 1.13 lakhs in 1937-38. As might be expected, following the restrictions on wool imports in Japan, there was a shortage of supplies of the raw material, with the result that receipt of woollen piecegoods from that country declined from 4.5 million yards valued at Rs. 37 lakhs in 1937-38 to 1.5 million yards valued at Rs. 15 lakhs in the year under review. Imports from the United Kingdom were also reduced and amounted to 847,000 yards valued at Rs. 23 lakhs. Arrivals from other countries included Rs. 4 lakhs from Italy and Rs. 2 lakhs from Germany. Imports of woollen goods mixed with other materials also declined from 3.6 million yards valued at Rs. 51 lakhs in 1937-38 to 2.3 million yards valued at Rs. 32 lakhs in 1938-39, of which the United Kingdom supplied 1.7 million yards valued at Rs. 22 lakhs as against 2.7 million yards valued at Rs. 38 lakhs in the preceding year. Supplies from Japan were smaller than in the preceding year and were valued at Rs. 4 lakhs in the year under review. Consignments from Italy amounting to Rs. 3 lakhs in value, showed an increase, while those from Germany valued at Rs. 1 lakh remained almost stationary.

There is only a limited demand for foreign carpets and floor runs in India, imports of which were valued at Rs. 2½ lakhs in 1938-39 as compared with Rs. 4 lakhs in the preceding year. Or the total value of these imports in 1938-39 the United Kingdom supplied Rs. 1½ lakhs or 67 per cent., most of the remainder coming from Belgium, France, Germany, Turkey, Iran and China in the order named.

Imports of shawls and lohis were drawn chiefly from Japan and Germany and numbered 479,000 valued at Rs. 14 lakhs as against 493,000 valued at Rs. 18 lakhs in 1937-38. The contribution of these two territories to the total value of imports in 1938-39 was 64 per cent. and 29 per cent. respectively.

Imports of blankets and rugs, other than floor rugs, fell from 5.2 million lbs. valued at Rs. 39 lakhs to 4.1 million lbs. valued at Rs. 31½ lakhs in 1938-39. Italy was by far the largest supplier, the consignments from that country being valued at Rs. 30 lakhs as against Rs. 37 lakhs in the preceding year.

Of the total imports of woollen hosiery, which showed a small variation being valued at about Rs. 1½ lakhs in 1938-39, Japan supplied Rs. 7 lakhs and the United Kingdom, Rs. 6 lakhs.

Artificial Silk (Rs. 2.24 lakhs).—The total value of the imports of artificial silk and manufactures fell from Rs. 4.87 lakhs in 1937-38 to Rs. 2.24 lakhs in 1938-39. Both yarns and fabrics, including mixed goods of artificial silk recorded decreases. In recent years, Japan was the principal source of supply; but as a result

of the depression in artificial silk industry production of artificial silk in that country was considerably curtailed and many spindles, even prior to the Sino-Japanese War, were turned to the manufactures of staple fibre. Since the War, owing to the difficulty of obtaining the raw material the manufacture of artificial silk and staple fibre in Japan, like that of cotton and wool has been placed under rigid State control and subjected to regulations providing for the fixation of prices. Total imports of artificial silk yarn from all countries amounted to 17.2 million lbs. valued at Rs. 96 lakhs as compared with 31.6 million lbs. valued at Rs. 2.05 lakhs in the preceding year. Italy displaced Japan from the foremost position and supplied 10.5 million lbs. as against 2.8 million lbs. in the preceding year, while consignments from Japan declined from 28.2 million lbs. to 6.5 million lbs. The average declared value per lb. of imports from Japan and Italy during 1938-39 was 10 as, 2 p and 8 as 1 p, the respective figures for the preceding year being 10 as 4 p, and 10 as, 11 p. Imports of piecegoods, made entirely of artificial silk, also shrank from 89.7 million yards valued at Rs. 2.15 lakhs in 1937-38 to 28.6 million yards valued at Rs. 98 lakhs in the year under review. Or these, Japan supplied 26.3 million yards or 92 per cent. (Rs. 87 lakhs) as against 88.5 million yards or 98.7 per cent. (Rs. 2.10 lakhs) in the preceding year. The remainder came chiefly from the United Kingdom, imports from that country being valued at Rs. 6 lakhs as in 1937-38. The declared value per yard of imports from Japan was 5 as 4 p as compared with 9 as 10 p in 1937-38. Goods of artificial silk mixed with other materials were received in much smaller quantities, the total imports amounting to 5 million yards valued at Rs. 22 lakhs as compared with 16 million yards valued at Rs. 49 lakhs a year ago. Japan reduced her supplies to 4.3 million yards (Rs. 14 lakhs) from 15 million yards (Rs. 37 lakhs) in 1937-38. The remainder came mainly from the United Kingdom (Rs. 4 lakhs), Germany (Rs. 2½ lakhs) and Italy (Rs. 1 lakh). The average declared value per yard of imports from Japan was 5 as 2 p and of those from the United Kingdom, 13 as 2 p as compared with 4 as 0 p and 12 as, 8 p respectively, in the preceding year.

Silk, raw and manufactured (Rs. 1.94 lakhs).—In the year under review imports of both raw silk and silk manufactures recorded decreases in quantity and in value. Imports of raw silk declined from 2.5 million lbs. valued at Rs. 95 lakhs in 1937-38 to 2.2 million lbs. valued at Rs. 62 lakhs in 1938-39. In recent years, Japan took the lead in these imports, but in 1938-39 she gave way to China. Imports from China advanced from 929,000 lbs. (Rs. 31 lakhs) to 1,249,000 lbs. (Rs. 32 lakhs), while those from Japan dropped from 1,405,000 lbs. valued at Rs. 57 lakhs to 274,000 lbs. valued at Rs. 12 lakhs. It may be noted that as a sequel to the various restrictions that were imposed on cotton, wool and other textile fibres in Japan, the internal demand for raw silk in that country was on the increase and stocks that had accumulated prior to 1937 were very much reduced. Another interesting feature of the trade is the importation of 418,000 lbs. of raw silk worth Rs. 9½ lakhs into India from Burma, the corresponding figure

for the preceding year being 94,000 lbs. valued at Rs 2½ lakhs. It is evident that these goods were imported free of duty into Burma by land across the frontier and thence re-exported to British India. With a view to safeguarding the interest of the sericulture industry of the country the Government of India have taken steps to prevent any further development of this traffic and levied customs duty, with effect from the 1st February, 1939, on all such imports. Arrivals from other countries included 223,000 lbs. of raw silk worth Rs. 6 lakhs from Hongkong. There was a decrease in the imports of silk yarn which amounted to 1.1 million lbs. valued at Rs 32 lakhs as against 2.3 million lbs. valued at Rs. 61 lakhs in the preceding year. Supplies from Japan falling from 1.8 million lbs. valued at Rs 48 lakhs to 0.6 million lbs. valued at Rs 22 lakhs. The remainder came chiefly from Italy (Rs 5 lakhs) and China (Rs. 4 lakhs). Imports of silk piecegoods also declined from 22.9 million yards valued at Rs. 90 lakhs to 16.9 million yards valued at Rs 67 lakhs in 1938-39, of which Japan supplied 11.8 million yards valued at Rs 45 lakhs as against 18.7 million yards valued at Rs 73 lakhs. Imports from China were valued at Rs. 17 lakhs as compared with Rs 12 lakhs in the preceding year. Goods of silk mixed with other material also came chiefly from Japan and to a less extent from China, imports of which totalled 5.9 million yards valued at Rs. 31 lakhs as compared with 7 million yards valued at Rs. 38 lakhs in 1937-38. Japan supplied 3.8 million yards (Rs. 18 lakhs) and China, 1.6 million yards (Rs 8½ lakhs) as against 6.0 million yards (Rs 29 lakhs) and 0.6 million yards (Rs. 3½ lakhs) in the preceding year.

Iron and Steel (Rs. 6.68 lakhs).—The world's production of pig iron was estimated at 80 million tons and of steel (ingots and castings), at 106 million tons in 1938 as compared with 102 million tons and 133 million tons respectively, in 1937. There was thus a decrease of 22 per cent in the case of pig iron and of 20 per cent in steel. With the exception of Germany, where the output of both pig iron and steel reached new records in 1938, all the important producing countries registered marked decreases in production which, in many cases, fell below the level of 1936. In the United Kingdom, pig iron production, at 6½ million tons, was 20 per cent smaller than in 1937, while the output of steel also fell by 20 per cent to 10½ million tons. Stocks were reduced to manageable proportions and prices of pig iron which were at a high level in the beginning of the year,

remained unchanged till the end of 1938, despite the reduction in American prices in the latter half of June. From the beginning of January, 1939, there was, however, a reduction of British steel prices from 10 to 15 per cent which led to an improvement in demand. In the United States of America, the recession in steel operations which occurred during the last quarter of 1937 continued throughout the following year, but, towards the close of the year, there were re-assuring signs that the worst period had been over. In India, the industry had to suffer from prolonged labour troubles in the autumn of 1938, and despite a decrease in the output of pig iron, there was an increase in steel production. The output of pig iron declined from 1,644,000 tons in 1937-38 to 1,576,000 tons in 1938-39 but that of steel ingots rose from 922,000 tons to 977,000 tons. The production of finished steel, which excludes the production of some re-rolling mills using either imported or Tata's *semis*, showed an increase from 668,000 tons to 726,000 tons, the improvement being mostly noticeable in the case of bars, beams and channels. Almost the entire expansion in production was on account of the internal market, as exports of Indian iron and steel materials, with the exception of pig iron, have not so far assumed much importance.

Analysing the trade with the principal countries it may be noted that there was reduction in the imports from the United Kingdom from 168,000 tons in 1937-38 to 136,000 tons in 1938-39 but her percentage share in the total trade rose from 45.5 to 50 per cent. Imports from Continental countries declined both absolutely and relatively, the principal losses being for Belgium, from 54,000 tons or 14.6 per cent, to 33,000 tons or 12.1 per cent, Germany from 50,000 tons or 13.5 per cent to 30,000 tons or 11 per cent, and France, from 14,000 tons or 3.8 per cent to 10,000 tons or 3.7 per cent. With the cessation of the abnormal importation of *semis*—ingots, blooms, billets and slabs—from the United States of America, which was a feature of the trade in 1937-38, imports from that country dropped from 27,000 tons in 1937-38 to 9,000 tons in 1938-39 and concurrently, her percentage share in the total imports declined from 7.3 to 3.3 per cent. Among other countries imports from Japan, consisting largely of galvanized sheets, fell from 22,000 tons to 17,000 tons, but her relative share amounting to 6 per cent showed a small variation.

The following table shows the quantities and values of the principal descriptions of iron and steel imported into British India during the last three years —

	Quantity Ton (000)			Value Rs. (lakhs).		
	1936-37.	1937-38.	1938-39.	1936-37.	1937-38.	1938-39.
Steel angle and tee	14.4	14.3	9.4	15.2	21.6	15.3
Steel bars (other than cast steel) ..	24.6	51.2	17.0	32.4	96.7	43.6
Beams, channels, pillars, girders and bridgework	22.4	26.4	18.7	24.2	40.7	30.6
Bolts and nuts	8.6	10.5	8.8	21.3	35.1	31.7
Fencing materials (including fencing wire)	7.3	4.3	4.1	14.2	12.3	12.3
Hoops and strips	40.3	48.5	24.4	52.6	85.7	48.5
Nails, rivets and washers	10.9	15.3	11.2	28.3	45.6	34.4
Galvanised sheets and plates	54.7	42.8	25.7	91.7	97.4	59.1
Tinned sheets and plates	1.4	7.4	14.0	5.5	28.9	48.9
Sheets and plates not galvanised or tinned	24.2	23.8	26.0	32.8	46.4	51.6
Rails, chairs and fishplates	9.6	7.5	11.5	9.7	11.1	14.7
Tubes, pipes and fittings, wrought	35.9	41.4	34.3	69.6	1,07.0	1,03.8
Wire nails	4.4	6.2	4.9	6.7	15.2	10.9
Wire rope	2.8	4.3	3.2	14.5	23.7	20.7
Cast pipes and fittings	1.0	1.4	2.5	5.0	7.0	9.0
Sleepers and keys of steel or iron for railways	4.6	2.5	0.8	6.5	4.1	2.0

Machinery and Millwork (Rs. 19.72 lakhs).—The following table analyses the imports of machinery during the last three years.—

	1936-37	1937-38.	1938-39.
	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)
Prime-movers	1.55	1.70	1.87
Electrical	2.46	2.69	3.72
Agricultural machinery	11	11	14
Boilers	80	1.17	1.40
Metal working (chiefly machine tools)	28	36	39
Mining	10	17	25
Oil crushing and refining	20	23	44
Paper mill	8	45	28
Refrigerating	14	28	14
Rice and flour mill	6	9	7
Saw mill	3	4	4
Sewing and knitting machines and parts	54	82	57
Sugar machinery	94	60	61
Tea machinery	15	21	23
Cotton machinery	1.80	2.92	2.67
Jute mill machinery	74	1.06	71
Wool machinery	3	3	2
Typewriters, including parts and accessories	19	22	15
Printing and lithographing presses	18	23	19
Beltng for machinery	42	60	49

Motor Vehicles (Rs. 4.28 lakhs).—In view of the recession in general business activity, it is not surprising that both motor cars and heavier commercial vehicles were less in demand during the year 1938-39 than in the preceding year. The number of motor cars imported into India, which had risen from 12,116 valued at Rs 2.26 lakhs in 1936-37 to 15,697 valued at Rs 2.98 lakhs in 1937-38, declined to 11,058 valued at Rs 2.17 lakhs in the year under review. The table shows the number of motor cars imported during the past three years, indicating the principal sources of supply.—

Number of motor cars imported

—	United Kingdom.	United States of America.	Canada.	France.	Italy.	Other Countries.	TOTAL.
1936-37	5,677	3,742	1,290	41	382	984	12,116
1937-38	6,419	4,876	1,612	98	281	2,411	15,697
1938-39	5,117	3,170	972	66	232	1,501	11,058

The number of motor omnibuses, vans and lorries imported during the year under review, declined from 15,077 in 1937-38 to 7,808 in 1938-39, the value showing a decrease from Rs 2.07 lakhs to Rs 1.15 lakhs. Imports in 1938-39 were, as in the case of motor cars, lower than the corresponding figures for 1936-37. These imports, consisting largely of chassis, are mainly consigned from the United States of America and Canada. Imports from these two sources numbered 5,035 and 1,958 in 1938-39 as compared with 10,035 and 2,197 respectively, in 1937-38. There was a marked decrease in the imports from the United Kingdom, which numbered 607 as against 2,337 in 1937-38. The average declared value of chassis imported from the United Kingdom in 1938-39 was higher than in the preceding year and amounted to Rs 3.158, the corresponding figures for the United States of America and Canada being Rs 1.327 and Rs 1.390, respectively. The following table shows the total number of motor omnibuses, vans, etc., imported during the past three years.—

Imports of motor omnibuses, vans, etc.

—	United Kingdom.	United States of America.	Canada.	Other Countries.	TOTAL
1936-37	1,202	5,899	1,719	198	9,018
1937-38	2,337	10,035	2,197	508	15,077
1938-39	607	5,035	1,958	148	7,808

Hardware (Rs. 2.57 lakhs).—Imports of hardware were valued at Rs 2.57 lakhs in 1938-39 as compared with Rs 3.31 lakhs in 1937-38, showing a decline of 22 per cent. Prices showed small variations but reduced purchasing power of the Indian consumer largely accounted for this decrease.

Mineral oils (Rs. 14.67 lakhs).—The production and consumption of crude oil in the United States of America, by far the largest producing country, declined in 1938 from the high record of the preceding year, but there was little change in the rest of the consuming world. The production of kerosene and motor

spirit, including aviation petrol, in Burma which supplies the bulk of India's requirements, was estimated at 143 million gallons and 62 million gallons in 1938-39 as compared with 146 million gallons and 64 million gallons, respectively, 1937-38. Notwithstanding the increased imports of Bahrain oil to which a reference was made in the last Review there was very little competition in the Indian market. The price of motor spirit remained unchanged throughout the year under review, but that of kerosene was slightly reduced in September, 1938. The total imports of mineral oils of all kinds into India declined from 475 million gallons to 439 million gallons in the year under review.

Chemicals (Rs. 3.05 lakhs).—The total imports of chemicals in British India declined in value from Rs 3.33 lakhs in 1937-38 to Rs. 3.05 lakhs in 1938-39. Sodium compounds represented 44 per cent. of this total, imports of which were valued at Rs. 1.34 lakhs as compared with Rs 1.42 lakhs in the preceding year. Imports of Sodium carbonate and caustic soda, chiefly from the United Kingdom, increased from Rs 60 lakhs and Rs 43 lakhs to Rs. 61 lakhs and Rs 45 lakhs, respectively; while most of the other descriptions of sodium compounds showed small decreases. Acids as a class, of which acetic, citric and tartaric are the most important, were imported to the value of Rs 11 lakhs as compared with Rs 10 lakhs in the preceding year. Imports of potassium compounds fell from Rs 12 lakhs to Rs 11 lakhs; of zinc compounds, from Rs. 13½ lakhs to Rs 11½ lakhs and of manganese compounds, from Rs. 5 lakhs to Rs. 3 lakhs. Calcium compounds, valued at Rs. 7 lakhs, showed a small increase, while lead compounds, at Rs 1 recorded a decrease. Of the total imports of sulphur valued at Rs 22 lakhs in 1938-39 as compared with Rs 26 lakhs in the preceding year, Italy supplied 55 per cent and Japan 19 per cent, as against 65 per cent. and 27 per cent. respectively, in 1937-38. Among other chemicals, bleaching powder, copper sulphate, chlorine and aluminous sulphates showed decreases, while glycerine and copperas recorded increases.

The United Kingdom improved her position and supplied 56.5 per cent. of the total trade as compared with 53.7 per cent in the preceding year. On the other hand, the participation of Germany and Japan receded from 14.7 per cent. and 6.9 per cent. to 13.1 per cent. and 5.2 per cent. respectively. There was also a decline in the share of Italy from 6.0 per cent. to 5.2 per cent., while the contribution of the United States of America advanced from 5.1 per cent. to 6.5 per cent.

The production of chemicals in India, though gradually on the increase, is not sufficient to meet her own requirements. Chemicals derived from sulphuric acid have, so far, been manufactured, but no serious attempt has been made in India for the manufacture of alkalis. An interesting development that has occurred recently is the flotation of two companies—one by the Imperial Chemical Industries and the other under the management of Messrs Tata Sons—for the projected manufacture of soda ash, caustic soda and eventually of other allied chemicals.

Drugs and Medicines (Rs. 2.21 lakhs).—The total value of imported drugs and medicines fell from Rs. 2.36 lakhs to Rs 2.21 lakhs in 1938-39. Imports of proprietary and patent medicines were valued at Rs. 61 lakhs as compared with Rs 74 lakhs in the preceding year. The United Kingdom accounted for Rs 27 lakhs; Germany, for Rs. 12 lakhs and the United States of America for Rs. 13 lakhs. There was also a decrease in the imports of quinine salts, which were valued at Rs. 25 lakhs as compared with Rs. 26 lakhs in 1937-38. The principal suppliers were Germany and the United Kingdom. The former increased her share from Rs. 12½ lakhs to Rs. 14 lakhs, while the contribution of the latter remained almost steady at Rs. 7 lakhs. Camphor came, as usual, in large quantities from Japan and Germany which supplied 1,015,000 lbs. and 626,000 lbs., respectively, out of a total of 1,869,000 lbs. valued at Rs. 22 lakhs.

Paper and Pasteboards (Rs. 3.23 lakhs).—Imports of paper and pasteboard declined both in quantity and in value. The total quantity of paper of all kinds imported fell by 17 per cent. from 3 million cwt., to 2.5 million cwt., the corresponding decrease in value being from Rs. 3.60 lakhs to Rs 2.78 lakhs or 23 per cent. Printing paper is always the chief item and recorded a decrease from 1,221,000 cwt. valued at Rs. 1.39 lakhs to 922,000 cwt., valued at Rs. 93 lakhs. Sweden and Norway together supplied 327,000 cwt. or 50,000 cwt., more than in 1937-38, while the supplies from Germany, which are mainly of Scandinavian origin, declined from 391,000 cwt. to 305,000 cwt. Imports from Austria shrank from 192,000 cwt. to 98,000 cwt. Arrivals from the United Kingdom and Japan also fell from 53,000 cwt., and 25,000 cwt. to 18,000 cwt. and 4,000 cwt., respectively. Imports of writing paper and envelopes rose in quantity from 179,000 cwt. to 181,000 cwt., but declined in value from Rs 46 lakhs in 1937-38 to Rs 44½ lakhs in the year under review. Packing and wrapping paper, imported chiefly from Sweden, Germany and Norway, also recorded a decrease from 510,000 cwt., valued at Rs. 84 lakhs to 387,000 cwt., valued at Rs 67 lakhs. Imports of old newspapers in bales and bags, chiefly from the United Kingdom fell from 978,000 cwt. to 948,000 cwt. in quantity and from Rs 47½ lakhs to Rs. 38½ lakhs in value. The value of paper manufactures, imported mainly from the United Kingdom, receded from Rs 20 lakhs to Rs. 16 lakhs. There was also a decrease in the imports of pasteboard, millboard and cardboard including manufactures thereof which amounted to 541,000 cwt. valued at Rs 45 lakhs as compared with 634,000 cwt., valued at Rs 55 lakhs in 1937-38. Of these, strawboards accounted for Rs. 17 lakhs as in the preceding year.

Liquors (Rs. 2.11 lakhs).—The total imports of liquors declined from 4.9 million gallons valued at Rs 2.30 lakhs in 1937-38 to 4.7 million gallons valued at Rs 2.11 lakhs in the year under review. All the descriptions, including the more expensive liquors such as, wines, brandy and liqueurs, imports of which are comparatively small, showed decreases. Bombay took the largest quantity—1.7 million

gallons valued at Rs 74½ lakhs as against 1·8 million gallons valued at Rs 83 lakhs and was followed by Bengal with 1·46 million gallons valued at Rs 68 lakhs against 1·59 million gallons valued at Rs 73½ lakhs. Sind and Madras also reduced their requirements to Rs 43 lakhs and Rs 24½ lakhs from Rs 46½ lakhs and Rs 27 lakhs respectively. Nearly 77 per cent of the total quantity of imported liquors consisted of ale, beer and porter which showed a decline from 3·7 million gallons valued at Rs 75 lakhs in 1937-38 to 3·6 million gallons valued at Rs 73½ lakhs, about 2 million gallons or 56 per cent coming from the United Kingdom. The remainder came chiefly from the Netherlands, Germany and Japan. Spirits accounted for 21 per cent of the imports and wines 2 per cent. Imports of spirits fell from 1·1 million gallons valued at Rs 137 lakhs to 1·0 million gallons valued at Rs 124 lakhs.

Sugar (Rs. 46 lakhs).—The smaller production of sugar in India in the last and also in the current season and the increase in sugar prices encouraged imports of sugar particularly in the last month when no less than 27,000 tons of sugar were imported into India including Kathiawar. Total imports of sugar, 16 D.S. and above into India, including the Kathiawar States, advanced from 22,000 tons valued at Rs 25 lakhs in 1937-38 to 55,000 tons valued

at about Rs 63½ lakhs in 1938-39. Java contributing 50,000 tons or 91 per cent of the total quantity imported as against 19,000 tons or 86 per cent in the preceding year. Arrivals from other countries included 1,000 tons from Hongkong and 2,000 tons from the United Kingdom. There was also an increase in the imports of beet sugar which amounted to 4,000 tons valued at Rs 5½ lakhs, the trade being divided between the United Kingdom and the Netherlands in the proportion of 75 per cent, and 25 per cent.

Salt (Rs. 38 lakhs).—Foreign salt is largely consumed in Bengal. Imports of salt fell from 347,000 tons valued at Rs 56 lakhs in 1937-38 to 312,000 tons valued at Rs 48 lakhs in 1938-39. Aden continued to be the chief source of supply, although she reduced her contribution from 306,000 tons to 157,000 tons. The feature of the trade was the renewed importation from Egypt which amounted to 78,000 tons in 1938-39. Arrivals from other countries included 32,000 tons from Germany, 17,000 tons from Italian East Africa and 21,000 tons from French Somaliland. The production of Indian salt in 1938 amounted to 15,85,000 tons as compared with 14,92,000 tons in 1937. The coastwise imports of Indian salt into Bengal during 1938-39 totalled 194,000 tons as against 229,000 tons in the preceding year.

Other Articles.—The following table shows the course of trade in some of the other articles of importance in imports:—

	1936-37	1937-38	1938-39
	Rs. (lakhs).	Rs. (lakhs).	Rs. (lakhs).
Instruments, apparatus, etc.	4·97	6·13	5·85

Cotton (Rs. 23.86 lakhs).—Exports of Indian cotton in 1938-39 declined to 2,703,000 bales from 2,731,000 bales in the preceding year. Japan, always the best customer, took 1,211,000 bales as compared with 1,359,000 bales in 1937-38 and 2,334,000 bales in 1936-37. This contraction in the Japanese purchases was no doubt due to war-time economic measures in that country which had the effect of seriously restricting imports, particularly from non-yen currency countries. The total imports of cotton into Japan from all sources declined from 898,000 tons in 1936 to 812,000 tons in 1937 and further to 553,000 tons in 1938, the contribution of British India being 44 per cent, 51 per cent, and 33 per cent, respectively, of the total imports into that country. The decrease in the imports from India was set off by increased importations from China, which accounted for 15 per cent, of the total imports of raw cotton into Japan in 1938 as against 3 per cent, in 1937. Exports to the United Kingdom showed an improvement and amounted to 411,000 bales as against 395,000 bales in 1937-38. Germany and France also increased their purchases from 166,000 bales and 95,000 bales to 192,000 bales and 169,000 bales, while Italy and Belgium reduced their

takings from 151,000 bales and 196,000 bales to 92,000 bales and 142,000 bales respectively. Exports to China advanced from 69,000 bales to 193,000 bales. Shipments to other countries included 58,000 bales to the United States of America and 48,000 bales to the Netherlands.

Cotton Manufactures (Rs. 7.12 lakhs).—In striking contrast to the conditions prevailing a year ago, the Indian cotton industry experienced a difficult year in 1938-39. With the increase in production, which exceeded even the record figure of 1937-38, there was a heavy accumulation of stocks. Due to lower purchasing power of the Indian agriculturists, the internal trading was not very active and overseas markets, which are generally not very important for the Indian industry, offered poor outlets. Further, the concessions granted to labour in certain cotton manufacturing areas raised the cost of production which rendered the prices of manufactured goods almost unremunerative. These difficulties have been aggravated owing to increased imports of cotton piece-goods, chiefly from Japan, during the year under review at relatively lower prices. The production and exports of the different classes of piece-goods during the past three years are shown below —

(In million yards)

	MILL PRODUCTION			EXPORTS		
	1936-37.	1937-38.	1938-39	1936-37.	1937-38.	1938-39.

Jute and Jute manufactures (Rs. 39.66 lakhs).—The total exports of raw and manufactured jute during the year under review amounted to 1,647,000 tons as compared with 1,768,000 tons in 1937-38, a decline of 7 per cent. The value of these shipments also fell by 10 per cent from Rs. 43.80 lakhs to Rs. 39.66 lakhs. Both raw and manufactured groups showed decreases.

Exports of raw jute declined in quantity from 747,000 tons in 1937-38 to 690,000 tons in 1938-39, and in value from Rs. 14.72 lakhs to Rs. 13 40 lakhs. The United Kingdom and France increased their purchases from 145,000 tons, and 65,000 tons to 181,000 tons and 76,000 tons, respectively, while Germany reduced her takings from 141,000 tons to 132,000 tons. Exports to Belgium and the Netherlands were smaller than those in the preceding year and amounted to 51,000 tons and 13,000 tons as against 55,000 tons and 19,000 tons, respectively, in 1937-38, while shipments to Czechoslovakia advanced from 3,000 tons to 21,000 tons. Italian jute mills were forced to use a percentage

of lower grade hemp instead of jute and this resulted in the falling-off or detraction from that country from 73,000 tons to 46,000 tons. There was also a marked decline in the exports to the United States of America which amounted to 31,000 tons as compared with 99,000 tons in 1937-38. Exports to Brazil, Japan and the Argentine Republic were almost on the level or the preceding year and amounted to 25,000 tons, 15,000 tons and 10,000 tons, respectively. Exports to China, including Manchuria totalled 19,000 tons or about 4,000 tons more than in 1937-38.

The total shipments of gunny bags in 1938-39 numbered 593 million as compared with 612 million in the preceding year. The value of the shipments also declined from Rs. 13.17 lakhs to Rs. 12.46 lakhs. Of the exports in 1938-39, sacking bags accounted for 455 million valued at Rs. 10.45 lakhs and hessian gunny bags 143 million valued at Rs. 2.00 lakhs. There was an increase in the shipments, chiefly under hessian gunny bags, to the United Kingdom

which numbered 75 million as compared with 62 million in 1937-38, the value realised, however showing a decline from Rs. 1.14 lakhs to Rs. 1.10 lakhs. Exports to other European countries taken together totalled 36 million in number as compared with 38 million in 1937-38. Next to the United Kingdom, the largest purchaser of Indian gunny bags was Australia, which took 66 million bags in 1938-39 as against 67 million in the preceding year. Burma came next with 62 million as compared with 51 million in 1937-38. Exports to the United States of America declined from 19 million to 11 million.

Food grains and flour (Rs. 7.74 lakhs).—

The total exports in this group declined from 878,000 tons valued at Rs. 9.49 lakhs in 1937-38 to 742,000 tons valued at Rs. 7.74 lakhs in the year under review. There were smaller exports of wheat, barley and pulses; while rice and Jowar and bajra recorded increases. The statement below shows the exports of food grains during the past three years —

	1936-37	1937-38	1938-39
	Tons (000)	Tons (000)	Tons (000)
Rice not in the husk	235	227	281
Rice in the husk	1	1	3
Wheat	235	400	279
Wheat flour	50	62	61
Pulse	80	86	81
Barley	10	35	9
Jowar and bajra	7	4	24
Other sorts	3	3	4
Total	621	878	742
Value Rs. (lakhs)	6.57	9.49	7.74

Tea (Rs. 23.42 lakhs).—The total production of tea in India in 1938-39 was estimated at 453 million lbs., or an increase of 5 per cent over the preceding season. As usual, Assam contributed the largest quantity and produced 261 million lbs. or 58 per cent. of the total Indian production. Production in the rest of Northern India amounted to 116 million lbs. or 25 per cent. Southern India accounted for 76 million lbs. or 17 per cent. Exports abroad rose in quantity from 334 million lbs. in 1937-38 to 350 million lbs. in 1938-39, but declined in value from Rs. 24.39 lakhs to Rs. 23.42 lakhs. The total quantity exported in the year under review represented 77 per cent. of the total production as compared with 73 per cent. in the preceding year.

Of the total exports of 350 million lbs. in 1938-39, the United Kingdom took 305 million lbs. as compared with 288 million lbs. out of a

total of 354 million lbs. in the preceding year. Purchases by other countries direct from India showed comparatively small variations. Ceylon took 15.3 million lbs. as against 15.4 million lbs., the United States of America 8.0 million lbs. as against 6.3 million lbs., and Bur. 3.4 million lbs. as against 3.5 million lbs. in 1937-38. As regards the nearer markets Iran and Ceylon increased their requirements from 4 million lbs. and 3 million lbs. to 5 million lbs. and 4 million lbs., respectively, in 1938-39. Burma, which was for the first time treated as an export market during 1938-39, curtailed her purchases from 7.7 million lbs. to 2.0 million lbs., while Australia increased her takings from 900,000 lbs. to 1,300,000 lbs. in the year under review. The share of Ceylon in the total exports of tea in 1938-39 was 39 per cent. and of China 25 per cent., the remainder being shipped mostly from Madras. Shipments from Calcutta in

1938-39 amounted to 206 million lbs. (204 million lbs.) and from Chittagong 88 million lbs. (79 million lbs.); while those from Madras totalled 56 million lbs. (51 million lbs.), the corresponding figures for the preceding year being shown in brackets.

The exports of Indian tea from the United Kingdom in 1938 totalled 36 million lbs. as compared with 35 million lbs. in the preceding year. Re-exports to Eire advanced from 14 million lbs. to 15 million lbs.; and those to the Soviet Union, from 3.7 million lbs. to 4.0 million lbs. Germany took 7.3 million lbs. in 1938 as against 5.9 million lbs. in the year preceding. Re-exports to the United States of America and Canada amounted to 4.0 million lbs. and 1.4 million lbs. as compared with 4.9 million lbs. and 1.5 million lbs. respectively, in 1937.

Oilseeds (Rs. 15.06 lakhs).—The total exports of oilseeds advanced by 26 per cent. in quantity and 6 per cent. in value and amounted to 1,199,000 tons valued at Rs. 15.06 lakhs as compared with 950,000 tons valued at Rs. 14.16 lakhs in 1937-38. As in the preceding year, groundnuts and linseed formed the bulk of these exports, both of which recorded substantial increases.

The Indian linseed crop of the season 1937-38, which was mostly marketed in the year under review, was estimated at 461,000 tons as against 420,000 tons in the preceding season. The Argentine crop of 1937-38 was smaller by 20 per cent. than the preceding one the official estimate of the out-turn being 1,515,000 tons. Shipments from India rose by 40 per cent. in quantity from 227,000 tons in 1937-38 to 318,000 tons in 1938-39 and by 25 per cent. in value from Rs. 3.57 lakhs to Rs. 4.40 lakhs. The exports to the United Kingdom were larger than in the preceding year and amounted to 271,000 tons as against 175,000 tons in 1937-38. It may be noted that Indian linseed which enjoys a preference in the United Kingdom is in better demand in that country than the Argentine variety, which practically dominates the world linseed market. According to the United Kingdom Trade Returns, India contributed 93 per cent. of the total quantity of linseed imported into that country during 1938-39 and Argentina 6 per cent. the corresponding figures of the preceding year being 70 and 29 per cent., respectively. Among Continental countries, Germany and France increased their takings from 7,000 tons and 6,000 tons to 10,000 tons and 9,000 tons.

The production of groundnuts in 1937-38 has been estimated at 3,501,000 tons of nuts in shells as against 2,714,000 tons in the preceding season. Production during the current (1938-39) season which is mainly exported during 1939, is estimated at 3,051,000 tons. As a result of the record crop of 1937-38 season exports during the year under review amounted to 835,000 tons as compared with 619,000 tons in the preceding year. The value of the exports also rose from Rs. 8.93 lakh in 1937-38 to Rs. 9.93 lakhs in 1938-39.

Hides and Skins (Rs. 8.57 lakhs).—Exports of raw hides and skins declined by 15 per cent. in quantity from 41,300 tons in 1937-38 to 35,300 tons in 1938-39 and by 23 per cent. in value from Rs. 4.94 lakhs to Rs. 3.81 lakhs. Of the total quantity exported in 1938-39,

raw hides represented 44 per cent. and recorded a decrease from 21,600 tons valued at Rs. 1.57 lakhs to 15,400 tons valued at Rs. 1.02 lakhs. Shipments in the year under review consisted of 13,300 tons of raw cow hides; 1,800 tons of buffalo hides and 300 tons of calf skins which are classified under raw hides.

Raw Wool (Rs. 2.99 lakhs).—A feature of the year's trade was the comparative steadiness in the prices of raw wool at a level, which might be regarded as unremunerative in many cases. Owing to increased production, there was a substantial increase in stocks of un-wool at various sources of supply. The United Kingdom is the most important importer of raw wool and stocks in that country were kept at a reasonably low level as there were steady clearances to meet the demand arising out of Government orders. The exports of raw wool from India amounted to 55 million lbs. valued at Rs. 2.99 lakhs in 1938-39 as compared with 38 million lbs. valued at Rs. 2.65 lakhs in 1937-38. Shipments to the United Kingdom rose from 31 million lbs. to 45 million lbs. and those to the United States of America from 5 million lbs. to nearly 9 million lbs. Exports to other countries were comparatively small.

Metals and Ores (Rs. 4.91 lakhs).—The total exports of metals and ores amounted to 1,509,000 tons valued at Rs. 4.91 lakhs as compared with 1,904,000 tons valued at Rs. 6.13 lakhs in 1937-38. Manganese ore represented 30 per cent. of the total quantity exported in 1938-39 as compared with 53 per cent. in 1937-38. Owing to the reduced demand from consuming steel industries, exports of manganese ore fell from 1,001,000 tons to 456,000 tons or a decrease of 54 per cent. as compared with the preceding year. The United Kingdom was, as usual, the largest purchaser and took 115,000 tons as against 284,000 tons in 1937-38. Shipments to Japan declined from 187,000 tons to 110,000 tons. There was also a considerable reduction in the exports to France and the United States of America which amounted to 87,000 tons and 67,000 tons as against 189,000 tons and 169,000 tons, respectively, in 1937-38.

There was also a decline in the exports of pig-iron which totalled 514,000 tons valued at Rs. 2.56 lakhs in 1938-39 as compared with 629,000 tons valued at Rs. 2.60 lakhs in 1937-38. Japan took the largest quantity, viz., 320,000 tons as against 312,000 tons in the preceding year; while the United Kingdom and the United States of America considerably reduced their purchases from 242,000 tons and 54,000 tons to 109,000 tons and 8,000 tons, respectively.

Lac (Rs. 1.27 Lakhs).—The Indian lac industry was in a depressed condition almost throughout the year under review. The supplies were plentiful but the demand, particularly from the United States of America, was poor. Prices of shellac reached the record low level during 1938-39. The total shipments of shellac amounted to 384,000 cwt. as compared with 409,000 cwt. in 1937-38 and 497,000 cwt. in 1936-37. Exports to the United Kingdom totalled 121,000 cwt. as against 105,000 cwt. in the preceding year. The United States of America and Germany reduced their purchases from 141,000

cwts. and 50,000 cwts. to 127,000 cwts. and 37,000 cwts. to 25,000 cwts. and those to France 34,000 cwts. respectively. while Italy slightly increased her requirements from 3,000 cwts. scale and amounted to 9,000 cwts. and 2,500 to 4,000 cwts. Exports to Japan declined from cwts. respectively.

Other Articles.—The following is a summary of the course of trade in the more important of the remaining articles of export —

	1936-37.	1937-38	1938-39.
	Rs. (lakhs.)	Rs. (lakhs.)	Rs. (lakhs.)
Oilcakes	1.86	2.43	3.01

Number of Motor Vehicles Running in British India.

The number of Motor Vehicles on Indian Roads continue to increase, and on 1st January 1939 there were 177,188 vehicles in British India and Indian States and a total of 22,810 in Burma, against 164,924 in British India and Indian States and of 20,613 in Burma on January 1st, 1938.

The total number of Motor Vehicles in British India as on 1st January 1939 was 144,296, out of which 92,477 were Private Cars, 4,240 Taxis, 21,523 Buses, 17,158 Lorries, and 8,898 Motor Cycles; while the total number in Indian States was 32,892, out of which 20,698 were Private Cars, 2,197 Taxis, 5,365 Buses, 2,391 Lorries, and 2,241 Motor Cycles.

Marked increases in the number of vehicles in use were shown by most of the Provinces. Bombay Presidency recorded the highest increase, with over 3,800 new vehicles on the road on January 1st 1939, and was followed by Bengal with an addition of more than 2,000 vehicles. The Punjab recorded an increase of 1,000 vehicles and Assam of 800, while many other Provinces followed with increases in a less marked degree. One prominent feature was the steady increase in goods lorries, recorded in almost all cases.

The following table shows the number of motor vehicles of all classes in operation in different Provinces of British India on 1st January 1939 —

Province.	Private cars.	Taxis	Buses.	Lorries.	Motor cycles.	Total.
Bombay	19,551	*	5,575	4,772	1,838	31,736
Bengal	19,900	2,129	1,725	3,376	1,155	28,375
Madras	14,008	367	4,119	1,747	1,319	21,560
United Provinces	12,945	431	2,730	794	919	17,119
Punjab	5,713	406	2,054	3,966	811	12,950
Bihar	4,962	407	645	504	549	7,067
Central Provinces	4,028	*	1,742	†	737	6,507
Assam	3,078	238	846	1,226	209	5,597
Sind	3,147	*	616	332	418	4,513
N. W. F. P. (Estimated)	2,132	125	732	760	360	4,109

Total (British India)	92,477	4,240	21,523	17,158	8,898	144,296

* Included in buses.

† Light lorries included in cars.

Number of Motor Vehicles in Indian States.

Complete figures showing the number of motor vehicles in Indian States are not available. The States vary in size from 19 square miles or a little more than small holdings to States like Hyderabad with an area of 32,692 square miles or as large as Italy. The number in some of the more important States as on 1st January 1939, and an estimate of the number in other Indian States is shown in the following table :—

State.	Private cars.	Taxis.	Buses	Lorries.	Motor cycles	Total.
Hyderabad	5,908	669	388	750	517	8,232
Mysore	3,235	90	585	375	468	4,758
Travancore	1,553	179	1,081	454	603	3,900
Gwalior	1,216	274	623	19	65	2,200
Holkar	1,179	14	195	45	59	1,695
Patiala	1,254	58	165	*	116	1,593
Jaipur	776	76	341	23	30	1,246

Index Numbers of Prices.

The Director-General of Commercial Intelligence and Statistics, Calcutta, publishes from time to time an addendum to the publication Index Numbers of Indian Prices 1861-1931 which brings up-to-date (1) the unweighted index numbers of 28 exported articles; (2) the unweighted index numbers of 11 imported articles; (3) the general unweighted index number for 39 articles and (4) the weighted index numbers of 100 articles.

The following table contains these index numbers since the year 1925 :—

(Price in 1873 = 100)

Year.	Exported articles 28 (unweighted).	Imported articles 11 (unweighted).	General Index No. for all (39) articles (unweighted).	Weighted Index No. (100 articles)
1925	233	211	227	265
1926	225	195	216	260
1927	209	185	202	258
1928	212	171	201	261
1929	216	170	203	254
1930	177	157	171	213
1931	125	134	127	157
1932	120	139	126	149
1933	118	128	121	139
1934	117	122	119	136
1935	128	122	127	149
1936	127	122	125	150
1937	133	144	136	155
1938	128	142	132	147
1939	*141	*146	*143	Not available.

* Provisional.

Besides the above wholesale price index numbers, the Director-General of Commercial Intelligence and Statistics, Calcutta, compiles a wholesale price index number for Calcutta while the Commissioners of Labour, Bombay and Sind, compile similar statistics for Bombay and Karachi.

The following table gives these index numbers since 1925 :—

Wholesale price index numbers for Calcutta, Bombay and Karachi (Base July 1914 = 100).

Year.	Calcutta.	Bombay.	Karachi.
1925	159	163	151
1926	148	149	140
1927	148	147	137
1928	145	146	137
1929	141	145	133
1930	116	126	108

Wholesale price index numbers for Calcutta, Bombay and Karachi (Base July 1914=100) —Contd.

Year.	Calcutta.	Bombay	Karachi.
1931	96	109	95
1932	91	109	99
1933	87	98	97
1934	89	95	96
1935	91	99	99
1936	91	96	102
1937	102	106	108
1938	95	101	104
1939	108	100	103

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during 1930 and 1931. This downward trend although somewhat checked in 1932, continued during 1933 and 1934 when the prices reached their lowest level. The prices however showed some improvement during the next two years and registered a sharp rise during 1937. The prices registered a perceptible fall in the following year but they soon recovered and registered a further rise in Calcutta and Bombay during 1939.

The various Provincial Governments publish in their respective *Gazettes*, fortnightly and monthly statements of retail and wholesale prices of certain important commodities. In addition to these, however, some of the Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres: for Bombay, Ahmedabad, and Sholapur by the Labour Office of the Government of Bombay; for Nagpur and Jubbulpore by the Department of Industries, Central Provinces and Berar; for six centres in Bihar by the Department of Industries, Bihar; for Madras, by the office of the Director of Industries and Commerce, Madras; for Lahore, by the office of the Director of Industries, Punjab; for Cutchak, by the Government of Assam and for Rangoon by the Labour Commissioner, Burma, Rangoon.

The working class cost of living index number for Bombay, which was hitherto compiled on a pre-war base, was revised during 1937, the base adopted for the new series being July 1933 to June 1934=100. The revised index number stood at 113 in December 1939, the average for 1939 being 106. The Ahmedabad cost of living index number with base August 1926 to July 1927-100 stood at 84 in December 1939 while the Sholapur cost of living index number with base February 1927 to January 1928-100 stood at 83 in December 1939. The Nagpur cost of living index number on base January 1927-100 was 74 in December 1939 while the Jubbulpore index on the same base was 69. The Madras cost of living index number with base

July 1925 to June 1930-100 was 105 in December 1939. The Lahore cost of living index number with 1931-35 prices equated to 100 was 125 in October 1939. For Rangoon four different index numbers with base 1931-100 are compiled for (a) Burmese, (b) Tamils, Telugus and Oriyas, (c) Hindus and (d) Chittagonians. The Index Numbers in December 1939 for these were 88, 95, 98 and 92 respectively.

The catastrophic fall in retail prices which commenced at the end of 1929 continued during 1930 and 1931. In 1932 prices ruled at a slightly lower level than in 1931. In 1933 and 1934 the downward tendency of prices continued. This downward tendency was somewhat checked during 1935 and 1936. The prices showed a definite rise in 1937 and remained more or less steady during 1938-39.

The inadequacy as also the general unreliability of Indian price statistics has been the subject of comment by many committees and commissions of enquiry and the majority of the Indian Economic Enquiry Committee of 1925 made many suggestions for the improvement of price statistics and advocated the passing of Census and Statistics Act. This latter suggestion was also endorsed by the Whitley Commission on Indian Labour and the Government of India have already taken up the recommendation which is under their consideration. Messrs. Bowley and Robertson who were invited by the Government of India to advise them on the question of obtaining more accurate and detailed statistics have also made certain recommendations for improving Indian price statistics. As regards the General Index number of wholesale prices in India they suggest the construction of a new index number on the model of that of the Board of Trade in England. With regard to index numbers of retail prices they recommend that the data should be compiled for India as a whole, and not for separate Provinces, and that they should not be initiated till certain preliminary steps of improvement of the data suggested by them have been taken.

The Indian Stores Department.

A detailed account of the organisation of the Indian Stores Department at Government of India headquarters and of the successive orders issued by Government to assure as far as possible the purchase of stores of Indian manufacture or in India is to be found in earlier issues of the "Indian Year Book." The current rules to regulate stores purchase prescribe that preference in making purchases shall be given in the following order:—

First, to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India, provided that the quality is sufficiently good for the purpose;

Second, to articles wholly or partially manufactured in India from imported materials, provided that the quality is sufficiently good for the purpose;

Third, to articles of foreign manufacture held in stock in India provided that they are of suitable type and requisite quality;

Fourth, to articles manufactured abroad which need to be specially imported.

The record of the activities of the Indian Stores Department for the year 1938-39 shows a further advance over the corresponding figures for the preceding year. This result was achieved in spite of the restrictions which were placed on new schemes of expenditure in every Department of Government from the beginning of the year and reduction in the general level of prices of many commodities, which adversely affected the statistics without any reduction in the volume of stores purchased and inspected during the year.

The Punjab Government introduced their new rules for the purchase of stores with effect from September, 1938. The Rupee Tender rules which make it obligatory on all purchasing departments to obtain their requirements of stores (with certain exceptions) on the condition that they are delivered in India and paid for in rupees in India, are now in force in every Province as well as in all departments of the Central Government.

The services of the Stores Department are also utilized by the Resident Engineer, Royal Airship Base, Karachi, for the purchase and inspection of miscellaneous stores, by the Inspector General, Police, Singapore, for uniforms and accoutrements. The Colonial Store Keeper, Ceylon, the Palestine Government and the Singapore Municipality are other authorities which avail themselves of its services.

The cost of the operations of the Department connected with the purchase and inspection of stores and the fees earned on these operations showed for the year 1938-39 a net debit of Rs. 1,50,446. The total direct and indirect expenditure upon the department in 1938-39 amounted to Rs. 26,43,516.

There were 867 sanctioned posts in the department at the end of 1938-39, 71 of these being held by gazetted officers. The number of European and Indian officers on 31 March 1939 stood at 17 and 52 respectively against 15 and 52 on the same date in the preceding year.

The Department constantly labours to assist manufacturers in India to improve the quality of their products, affording them technical advice and suggestions in the course of purchase and inspection. The Department makes every endeavour to substitute supplies of indigenous manufacture, wherever possible, without sacrifice of economy and efficiency, for supplies from others stores. Arrangements have been made in the Imperial Secretariat Buildings, North Block, New Delhi, for exhibiting articles of indigenous manufacture. The exhibition is now fully representative of the various classes of indigenous articles purchased by the Department during the year. The following exhibits were received from manufacturers in India—Electrical lamps, oils, paints, varnishes, steel sections and samples of raw materials, such as iron ore, manganese ore, lime stone, fireclay, coal, etc. used in steel making.

The Department has an Industrial Intelligence and Research Bureau attached to it, the principal functions of which are:

- (1) The collection and dissemination of industrial intelligence;
- (2) Collaboration with Provincial Directors of Industries and industrialists in all matters relating to industrial research;
- (3) The publication at intervals of bulletins relating to industrial research and other matters connected with industrial development;
- (4) Assistance to industrialists in India by giving advice and making suggestions as to the directions in which research should be undertaken;
- (5) To collaborate with the various organisations of the Central and Provincial Governments with a view to ensuring that specifications prepared or issued by them provide as far as possible for industrial standardisation;
- (6) To assist in the organisation of industrial exhibitions in India.

Bombay Stamp Duties.

	Rs.	a.		R	s.
Acknowledgment of Debt ex. Rs. 20 ..	0	1	Bond (not otherwise provided for)—		
Affidavit or Declaration ..	2	0	Not exceeding Rs. 10 ..	0	2

Lease—Where rent is fixed and no premium is paid for less than 1 year, same duty as Bond for whole amount; not more than 3 years, same as Bond for average annual rent reserved; over 3 years, same as Conveyance for consideration equal to amount or value of the average annual rent reserved; for indefinite term, same as Conveyance for a consideration equal to the amount or value of the average annual rent which would be paid or delivered for the first ten years if the lease continued so long; in perpetuity, same as Conveyance for consideration equal to one-fifth of rents paid in respect of first 50 years. Where there is premium and no rent, same as Conveyance for amount of premium; premium with rent, same as Conveyance on amount of premium in addition to the duty which would have been payable on the lease if no fine or premium or advance had been paid and delivered. For the Cities of Bombay, Ahmedabad, Poona, Sholapur, Surat and other Urban areas, the following scale has been made applicable by Bombay Act IV of 1939—

(b) (i) Where the lease is granted for money advanced and where no rent is reserved.

The same duty as is leviable on a conveyance [No. 23, as it stood before its amendment by the Bombay Finance (Amendment) Act, 1932] for a consideration equal to the amount of such advance as set forth in the lease.

(b) (i) Where the lease is granted for a fine or premium and where no rent is reserved.

The same duty as is leviable on a conveyance (No. 23) under the Bombay Finance (Amendment) Act 1932, for a consideration equal to the amount of such fine or premium as set forth in the lease.

(c) (i) Where the lease is granted for money advanced in addition to rent reserved.

Same duty as is leviable on a conveyance (No. 23, as it stood before its amendment by the Bombay Finance (Amendment) Act, 1932) for a consideration equal to the amount or advance as set forth in the lease, in addition to the duty which would have been payable on such lease if no advance had been paid or delivered.

Provided that, in any case when an agreement to lease is stamped with the *ad valorem* stamp required for a lease, and a lease in pursuance of such agreement is subsequently executed, the duty on such lease shall not exceed eight annas.

(c) (ii) Where the lease is granted for a fine or premium in addition to rent reserved.

The same duty as is leviable on a conveyance (No. 23) under the Bombay Finance (Amendment) Act, 1932, for a consideration equal to the amount or such fine or premium as set forth in the lease, in addition to the duty which would have been payable on such lease if no fine or premium had been paid or delivered.

Provided that, in any case when an agreement to lease is stamped with the *ad valorem* stamp required for a lease, and a lease in pursuance of such agreement is subsequently executed, the duty on such lease shall not exceed eight annas.

Letter—Allotment of Shares	0 2

Memo. of Association of Company—If accompanied by Articles of Association 30 0

If not so accompanied 80 0

Notarial Act 2 0

Note or Memo. intimating the purchase or sale—

(a) Of any Goods exc. in value Rs. 20 .. 0 4

(b) Of any share, scrip, stock, bond, debenture, debenture stock or other marketable security of a like nature exceeding in value Rs. 20, not being a Government Security—2 annas for every Rs. 2,500 or part thereof of the value of the security at the time of its purchase or sale, as the case may be.

Rs. a.

(bb) Of Government Security—Subject to a maximum of Rs. 20, 2 as. for every Rs. 10,000, or part at the time of purchase or sale as the case may be.

Note of Protest by a Ship's Master .. 1 0

Partnership—Where the capital does not exceed Rs. 500 5 0

In any other case 20 0

Dissolution of 10 0

Policy of Insurance—

(1) Sea—Where premium does not exceed rates of 2s., or $\frac{1}{2}$ percent, of amount insured 0 1

In any other case for Rs. 1,500 or part thereof 0 1

(2) For time—For every Rs. 1,000 or part insured, not exc. 6 months .. 0 2

Exceeding 6 and not exceeding 12 months 0 4

If drawn in duplicate, for each part.—Half the above rates, for Sea and Time.

(3) Fire—When the sum insured does not exceed Rs. 5,000 0 8

In any other case 1 0

In respect of each receipt for any payment of a premium on any renewal of an original policy—One-half of the duty payable in respect of the original policy in addition to the amount, if any chargeable under Art. 53 (Receipt).

(4) Accident and Sickness—Against Railway accident, valid for a single journey only 0 1

In any other case—for the maximum amount which may become payable in the case of any single accident or sickness where such amount does not exceed Rs. 1,000, and also where amount exc. Rs. 1,000, for every Rs. 1,000 or part 0 2

(5) Life, or other Insurance, not specifically provided for—

For every sum not exceeding Rs. 250 0 2

Exceeding Rs. 250 but not exceeding Rs. 500 0 4

For every sum insured not exceeding Rs. 1,000 and also for every Rs. 1,000 or part 0 6

It drawn in duplicate for each part half the above rates.

Insurance by way of indemnity against liability to pay damages on account of accidents to workmen employed by or under the insurer or against liability to pay compensation under the Workmen's Compensation Act of 1923. For every Rs. 100 or part payable as premium .. 0 1

In case of a re-insurance by one Company with another of policies of the nature in items (1) (2) and (3) above— $\frac{1}{2}$ of duty payable in respect of the original insurance, but not less than 1 anna, or more than 1 Re.

	Rs. a.	Rs. a.
Policies of all classes of Insurance not included in Article 47 of Schedule I of Stamp Act of 1899 covering goods merchandise, personal effects, crops and other property against loss or damage, or liable to the same duty as Policies of Fire Insurance.		
Power of Attorney —		
For the sole purpose of procuring the registration of one or more documents.		
In relation to a single transaction or for admitting execution of one or more such documents	1 0	
When required in suits or proceedings under the Presidency Small Causes Courts Act, 1882	1 0	
Authorising 1 person or more to act in a single transaction other than that mentioned above	2 0	
Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally	10 0	
Authorising more than 5 but not more than 10 persons to act	20 0	
When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a Conveyance for the amount of the consideration.		
In any other case, for each person authorised	2 0	
Promissory Notes —		
(a) When payable on demand—		
(i) When the amount or value does not exceed Rs. 250	0 1	
(ii) When the amount or value exceeds Rs. 250 but does not exceed Rs. 1000	0 2	
(iii) In any other case	0 4	
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand.		
Protest of Bill or Note	2 0	
Protest by the Master of a Ship	2 0	
Proxy	0 2	
Receipt for value exc. Rs. 20	0 1	
Reconveyance of mortgaged property —		
(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance.		
(b) In any other case	10 0	
Release —that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—		
(a) If the amount or value of the claim does not exceed Rs. 1,000—The same duty as a Bond for such amount or value as set forth in the Release.		
(b) In any other case	10 0	
Respondentia Bond —The same duty as a Bond for the amount of the loan secured.		
Security Bond —(a) When the amount secured does not exceed Rs. 1,000—The same duty as a Bond for the amount secured.		
(b) In any other case	10 0	
Settlement —The same duty as a Bond (but in its application to the cities of Bombay, Ahmedabad, Poona, Sholapur, Surat, and other urban areas the same duty as a conveyance if the property set apart is immoveable and the purpose is one other than charitable or religious) for the sum equal to the amount or value of the property—settled as set forth in such settlement.		
Revocation of Settlement —The same duty as a Bond (but in its application to the cities of Bombay, Ahmedabad, and Poona the same duty as a conveyance if the property set apart is immoveable and the purpose is one other than charitable or religious) for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.		
Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.		
Shipping Order	0 1	
Surrender of Lease —When duty with which lease is chargeable does not exceed Rs. 5—The duty with which such Lease is chargeable.		
In any other case	5 0	
Transfers of Shares —12 annas for every Rs. 100 or part thereof of the value of the shares.		
Transfer of debentures , being marketable securities whether the debenture is liable to duty or not, except debentures provided for by section 8—12 annas for every Rs. 100 or part thereof of the face amount of the debenture.		
Transfer of any interest secured by a Bond, Mortgage-deed, or Policy of Insurance —If duty on such does not exceed Rs. 10—The duty with which such Bond, &c., is chargeable.		
In any other case	10 0	
—of any property under the Administrator General's Act, 1874, Section 31.	10 0	
—or any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.		
Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.		
Trust, Declaration of —Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15 0	
Revocation of—Ditto, but not exceeding	10 0	
Warrant or Goods	0 8	

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the *Indian Year Book*. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved; and

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focusing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-constituted its creed in definite terms. They laid down that—

“The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country.”

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the moderates and the extremists was fundamental; the extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extremists left described as a climb-

down, while the Liberals moved towards the left, with the result that for a time there appeared to be a commonness of purpose between the Liberals and Congressmen. At its 1928 session the Congress, while adhering to Independence, agreed to accept Dominion Status, if granted, before the end of 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England, British India and the Indian States. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the “ultimatum” issued at its previous session, the Congress, at its 1929 session, declared for complete independence or “Purna Swaraj.” Throughout the year 1930 the Congress was engaged in a defiance of the law of the land which, it was hoped, would help India, to attain complete independence. Early next year the Congress actually suspended civil disobedience by virtue of an agreement arrived at with the Government, but the fulfilment of the terms of this agreement gave rise to trouble and another agreement was concluded.

As a result of this Mr. Gandhi, on behalf of the Congress went to London to take part in the Round Table Conference. While he was away things took a turn for the worse in the country, and matters reached a crisis with the birth of the New Year. In 1932 the Government bent all its efforts to making it impossible for the Congress to carry on its subversive activities and succeeded fully in its object. Congress was crushed and all forms of Congress work throughout the country were successfully prevented. In fact as well as in law Congress ceased to exist. In the middle of 1934 the civil disobedience movement, which had rendered the Congress illegal was withdrawn. In the autumn of that year Mr. Gandhi retired from the Congress and politics, although he remains in practice the virtual dictator of Congress policy. At present, the Congress is once again a constitutional organisation. It was actually in charge of His Majesty's Government for more than two years in eight provinces under the 1935 constitution (See past issues of the *Indian Year Book* for a history of the non-cooperation and the civil disobedience movements.)

In spite of open hostility to the political reforms embodied in the Government of India Act of 1935 the Congress decided to contest elections under the much wider franchise conferred by it and scored signal success at the polls. Congressmen secured clear majorities in six of the eleven provinces. A sharp difference of opinion prevailed on how to utilise these majorities—the right wing desiring to assume executive power and thereby bringing about a replacement of the “unwanted constitution” by one designed by Indians themselves, and the left wing wishing to adopt obstructive tactics right from the start. Mr. Gandhi evolved a clever formula whereby he sought not only

to prevent a schism in the Congress but also to place the British Government in the wrong. He advised Congress majorities to form Cabinets provided the Governors of Provinces undertook in advance not to exercise their discretionary powers of interference with Ministers in respect of their "constitutional activities". This the Governors refused to do as being contrary to the provisions of the Act and the Instrument of Instructions. The Congress refused to form Cabinets without the assurance demanded, and the Governors called upon leaders of minority groups to form Ministries. These Ministries were short-lived—they could not be otherwise. For one thing, they had hardly any support behind them and for another the majority party soon came to claim their rightful place. The controversy over the conditions on which the Congress agreed to take office was amicably settled, with the result that in six of the eleven provinces the quondam outlaw assumed the reins of His Majesty's Government. Subsequently, thanks to coalition with other groups, two more provinces, the North-Western Frontier Province and Assam, came under the Congress influence. The Congress thus proved an adept in parliamentary tactics as in direct action. As Government, the Congress Ministries in the various provinces displayed initiative, sagacity, tact and firmness and earned well deserved encomiums.

Meanwhile Mr. Gandhi had been concentrating in rural uplift work, thereby exploring the possibilities of a new field for exploitation. His foresight was amply rewarded by the success of Congressmen at the general elections of 1936. In that year, for the first time in the history of the Congress, the annual session was held in a village. It proved the correctness of Mr. Gandhi's plan, for it served to send the Congress into the villages—the real masses of India were touched by the Congress.

In keeping with the idea underlying the holding of the Congress sessions in rural areas Mr. Gandhi definitely gave a rural bias to Congress activities. Thanks to him, khaddar and other cottage industries got a fillip and the ryot on the field is now more in evidence than before 1935.

Partly because of this and partly due to the fact that the cultivator was given a large measure of importance under the new franchise the peasants came into their own in Indian politics. The movements in certain parts of India, especially in Bihar and the United Provinces to arouse consciousness among the cultivators were accelerated in consequence. This was all to the good from Mr. Gandhi's and the Congress point of view inasmuch as the Congress was best suited to exploit this vast source of political power in future. At the same time, it had in store a new development which was not very much to Mr. Gandhi's liking, namely, the growth of the *Kisan Sabha* under the guidance of irresponsible extremists. This latter organisation, at first sponsored and developed by Congressmen, was soon captured by extremists who had little faith in the Congress creed of truth and non-violence and in its policy of harmonising the differences among the various grades of society by adjustment and evolution rather than through revolution. The leaders

of the *Kisan Sabha* soon eclipsed genuine Congressmen and propagated a spirit of violence among the ignorant and gullible mass of peasantry which today has become a serious problem for Mr. Gandhi and his right wing followers.

A similar development occurred in the industrial sphere where extremists, taking advantage of the comparative freedom allowed to them by Congress Governments in the provinces stirred up trouble among the working classes much to the chagrin of Mr. Gandhi and his friends who are definitely opposed to class war of any kind.
